12122. MA / NH File

Yahoo group: PRO-96 (2008 — 2017)
Date: 2008-01-02 14:31:20 UTC
From: qazaqw
Topic: 12122 Message: 12122

Anyone have an up-to date MA / NH file they would share. I have had my Pro-96 for several years and have tried to keep it up to date but I amm sure I have missed some.

I looked through files but could not find anything up to date.

Radio is used daily and has served me well but volume control showing signs of needing to be repaired. Will send back to RS for rapair.

Thanks,

Norm

A very easy method to keep your scanner updated.
1. go to www.radioreference.com
2. join and subscribe for premium membership @ $7.50
3. run Win96
4. select Files>Web Import and sign in using your RR info
5. navigate to desired database page and select data to import
6. import data to software
7. repeat step 5 & 6 for other data
8. when finished, save file and load to scanner

Thanks, I can try that. I haven☐t used radioreference for about a year and a half. The last time I did use it the data was not the latest. My own home town did not have the correct fire frequency and several surrounding towns were incorrect but I will give it a try.

If you know the information is not updated, then why don't YOU send updated information, then it's available for everyone to use...That's the whole point of Radio Reference.

With that kind of attitude, and lack of concern and help for fellow listeners, why should anyone help you by sending an updated file, which by your own admission is probably not as accurate or updated as your information.

Gesh!

12128. Quality Earphone

Yahoo group: PRO-96 (2008 — 2017)
Date: 2008-01-03 19:41:10 UTC
From: Brian J. Rueger
Topic: 12128 Message: 12128

Since there are a lot of like minded folks here, I thought I'd ask this question.

I listen to my scanner while watching TV in the evening and don't want to disturb others in the room.

So, I want a good quality single ear earphone.

Anyone know where to get one of these?

I used to have a good one that I purchased a few years ago for my fire department, but I lost the address. This earphone was black and had a soft, white, shooting type ear insert.

Thanks for your help.

Brian

From: Paul
Topic: 12136 Message: 12136

Hi,
I purchased a DTS-96 (which is a pro96 clone) and I have a couple of questions:

1) Can you set it so that you can make it decode CTCSS and DCS at the same time?

2) What mode does it have to be to decode APCO25 on a non trunked system?

3) What sort of battery life do people get from it?

4) Overall are you happy with the Pro96 and what features does it have above the 396T (that I also have but want to replace with the DTS-96)

Paul

Topic: 12129 Message: 12137

Using Win96, it's on the Settings/Weather panel.

Hint: If you try to center, it will be tricky, but doable.

Suggestion: Based on LE advice years ago, I label my valuables with "STOLEN FROM <driver's license number>". This is what I made the boot screen read (as well as having it engraved in the case).

Two results:
1. If it says, "stolen from" on it, the officer said, that gives probable cause.
2. If it has DL instead of your name, the person in possession, having already said it belongs to his/her friend (seems they always say that), won't be able to give the right "friend's" name.

Of course, it helps in reclaiming, if it's recovered.

You don't have to do anything to decode APCO25 on a non trunked system.
I'm happy with the Pro96 but the BC396 does a lot of things that the Pro96 doesn't.
Besides the massive memory on the BC396. The Pro96 used to recieve distant signals better and gave a better sound.
Now that I flashed my BC396 with the newest update the sound is as good and it recieves digital better.

Also would seem to encourage the beginnings of id theft by publishing your drivers license number why not just add your social security number as well just in case.

Well almost. if you're running a Mac (or linux or some other reason the software won't run) you can go to someone that is running it and download, modify then upload there or you can clone it from someone that has the same load as you, but with a different boot up line.

Can't change the welcome screen without the software.
Win96 scanner software will allow you to change the PRO96 opening
screen to something like: "REWARD 4RETURN (555)555-1234 FRED F"

1. Jan, from what the crime prevention officer told me, putting your full info on it does two things: a) It fails to give LE probable cause; b) it tells the thief whom to say it belongs to, and also--if it was stolen not from your home--where the thief can find more good stuff. (Also, don't label your keys, except if you subscribe to one of those services where they can be returned anonymously.)

2. Jim, your DL is already public record; anybody can search it for a fee. CA DMV _sells_ vehicle reg. records to marketers! Besides, I don't know what an identity thief can do with only your DL, esp. without your name, as it would be engraved on your scanner or other property.

Back in the 70's CB craze my brother had a radio
stolen from his vehicle. Several years after it had
been replaced and insurance fixed his car, a CB shop
owner called him up and asked him if he was missing or
had sold a CB radio. My brother had placed a partial
index card with his name and phone number inside the
case and the message that if found, please call since
it probably was stolen.
Some honest people were still alive at that time and
followed the instructions that were on the card.
Law enforcement has given instructions to use drivers'
license numbers as a source of identification if you
are marking VCRs, TVs, stereos, etc. They may even
let you borrow an engraving tool to do it. That way
they can research a potentially stolen item and get it
returned to it's owner.
I would like to know who isn't advising this anymore.
My brother was a police officer for almost 20 years.
The Social Security Number is NOT to be used as it is
a key to all your private information that you don't
want divulged.

Available in Australia - Only problem is Win 96 isn't compatible apparently - allowing only one base & Offset to be programmed for Motorola Type 2 Systems - which makes it basically useless here in Parts of Aust for our GRN Trunking Systems.

I tried searching for a scanner with this model number DTS-96 and got nothing but info on digital audio and dvd stuff. I had never heard of this scanner. Who makes it? I'm curious to what you bought.

Take it back while you can still get a refund.

DSE really screwed it up. Most of the software
available for the PRO96 will NOT work on the DTS-96.

Have a look at the ScanNSW forums.

Seems to me we should call your scanner a variant of the Pro-96, rather than a clone; it must be built, in software at least, and possibly in hardware, different. You say you have different trunking, so the scanner must be different, and so the computer software to interface it must be different.

I have no answers for you, I'm afraid.

To connect between scanner and computer software, you need 5 pieces:

1. Scanner that has the right connection (restating the obvious),
2. Computer (restating the obvious),
3. Software that is designed for your scanner,
4. Interconnecting cable for your scanner and appropriate for your computer,
5. Device driver(s) for that cable.

4, Cable: The cable MUST be designed for your particular model scanner. The RadioShack cable I have covers many models, some with an adapter (which is not used on RS Pro-96).

There are basically 2 categories of cables, USB or Serial. I'll assume you know which connector is which. Note that the RS USB cable requires setting of a virtual serial port.

Cable should come with a CD with the drivers on it and an install program; directions should be on paper and/or on CD.

3, Software: 1. Read the directions. 2. Follow them. With Win96 and USB cable, I needed to set software to same serial port as cable.

Final hint: Test by trying to upload from scanner to computer. This will prove a good connection once you get one, without messing with your current programming.

We have to be able to Program in more than one Base & Offset in order for the scanner to Follow the GRN Trunking System correctly - which is a 400 MHz Motorola Type 2 Omnilink system.
They will work on some sites in NSW ok - but are basically useless here in SA - without the Multiple Base & Offsets - unsure about Victorias new MMR system - but the Pro 96 will work on all of them.
Kinda Glad I bought the Pro 96 myself.

Okay, Bob, what we need to know from you is:

1. What device (cable) do you have? Is it RadioShack? Is it USB on one end, an amber thingy in the middle, and a mini-phone jack on the other end? Did it come with a mini-phone adapter?

2. The "green and white" CD: RS p/n 20-047 per chance?

3. Is your software Win96? What version? (Shows in title bar.) (You are using Windows 95, 98, ME, NT, 2000, or XP, right?)

4. Versions in your Pro-96? (Turn on the scanner and press "3" while the Welcome screen is on, and read quickly! [Seriously, repeat as needed to get it all.] Write down all 3 values returned.)

Give us this info and we should be able to get you going short-order.

12179. Listining to only one specific talkgroup APCO25

Yahoo group: PRO-96 (2008 — 2017)
Date: 2008-01-08 16:59:25 UTC
From: battphone1
Topic: 12179 Message: 12179

In my area the entire county is using the APCO 25 Motorola system. I have been able to obtain the talk group ID's and have figured out which agency is in eack talk group.

I have found that there are seperate "Main" channels for Fire/EMS and Police and each agency (fire for instance) opperates on thiere own designated talk group.

My question to the group is this: How can listen only to a specific talk group in Manual mode? Is it even possible? Say for instance there is a large fire and I only want to hear the opperations on that fire ground. With the amount of traffic on the "Main" channels only scanning the fire bank is not a good option. Should I program in one talk group per channel? This seems a little inefficient because the control channel would be entered multiple times.

Assistance is appreciated.

Joe M. gave you a good tip. Look in the archives for the thread, "Manually Selecting Talkgroup to Monitor", starting with Rob's question on Nov 25 07 (last post I'm finding is Dec 1).

I vaguely recall something about how if the control channel changes, the hold is dropped, but I couldn't find it; maybe a different thread.

12188. Programming multiple Fleetnet Zones

Yahoo group: PRO-96 (2008 — 2017)
Date: 2008-01-15 02:26:27 UTC
From: bob_cous
Topic: 12188 Message: 12188

Can anyone shed a little light on how I can program my PRO-96 for multiple Fleetnet Zones? . . .

I often travel from Zone 1 into Zone 2 areas . . . and next week I'm heading up to the North bay area and would like to listen there too.

So far, I've only been able to program Zone 1 - and then "OPEN" the bank when I get into Zone 2. Unfortunately, I then don't get the benefit of referrencing programmed talkgroup tags.

Any assist is greatly appreciated.

Bob ;-)

From: ALfer
Topic: 12188 Message: 12190

I would program each zone in a different virtual folder in the radio, I do this for the various parts of the Province that I travel in along with all the NASCAR tracks that I go to in the US.

eg: I have 1 folder for Simcoe County and when I go to Wellington County I just load up that virtual folder.

Works great...

12191. Programming Multiple Fleetnet Zones

Yahoo group: PRO-96 (2008 — 2017)
Date: 2008-01-20 18:08:51 UTC
From: bob_cous
Topic: 12191 Message: 12191

Thanks to those who replied . . .

Two more questions:

1) Is there any advantage to spreading out the towers into different banks versus putting the whole system into one bank (other than the limits on TagID)?

2) What is the purpose of the three different Base/Spacing/offset information on RR?

Custom Frequency Table

Base Spacing Offset
141.0150 15.0 380
151.7300 15.0 579
154.3200 15.0 632

(I only have the first one plugged into my PRO-96)

12192. Re: Programming multiple Fleetnet Zones

Either method is ok, but you only need the Controls and Alt Control frequencies.

If the tables are correct, you will need all three tables programmed. However, Win96 software is the only way it can be programmed. The keyboard will only set a single table.

There is no scanner on the market that will do a Provoice System. That is EDACS digital which is not a technology available in a scanner. You can do APCO-25 Motorola systems.

Subject: Re: [PRO-96] Problems with my Pro-96

I had mine for two years never had that problem. I had mine sent out twice and got it bk within a month...but I think It might depend on your location....Iam in south jersey.The first problem I had was a led line was out and it was repair under warranty.....second I had big time problems with reception..turns out the antenna soldered to the board inside of scanner seperated....that repair was $50....hope that helps...

Topic: 12209 Message: 12210

You can fabricate a mount out of a short piece of flat stock (aluminum would do). Think small towel rack, something to hang the scanner by the belt hook.

Quick, easy, cheap and fairly secure.

12215. Radio Shack Scanner Programming Cable & Software for PRO96

Yahoo group: PRO-96 (2008 — 2017)
Date: 2008-01-29 19:29:16 UTC
From: John P.
Topic: 12215 Message: 12215

Is there something in the FILES section that tells the 'secret' of how to load the Radio Shack USB/Serial Scanner Programming Cable?

IIRC, you have to load the RS CD first, then plug in the cable, but don't the computer load the Windows default software for the cable? One hard drive ago I recall it being a big conflict between the RS software and Windows. Also, don't you need to set a 'comm' port somewhere?

Thanks,
John

If it came with a CD, run that first.

After that, or if no CD, plug in the cable (without the scanner attached). Let XP discover and install it (may have to be done on EACH USB port you might use).

Go to Device Manager and check the COMM port setting for the new cable. Write that down.

Plug the new cable into the scanner. Set the software for that port (device manager told you) and program away.

John,
if you're using the RS #20-047 (orange color) USB cable you'd be better off going to the Radio Shack site and downloading the program from there. I had the same problem, and found out there was a bad batch of CD's that were missing a file (dll I think).. after downloading the drivers from the website it worked fine. here is the link, copy and paste it to get to the download site....save it to a file for future reference...

http://rsk.imageg.net/graphics/uc/rsk/Support/SoftwareDownload/2000047.exe

I find it great with Win96.....

12225. Changing delay time in search mode?

Yahoo group: PRO-96 (2008 — 2017)
Date: 2008-01-30 14:54:35 UTC
From: Doug Augelli
Topic: 12225 Message: 12225

Hi All

I was wondering if there is a way to change how long when in search mode, the delay time? Either with Win96, or by keypad?

I been trying to get a bunch of pl's for some dept's in my area, and these old eyes just can't read that quick..

It just seems to only have maybe a 1-2 second delay? Doesn't even give me time to hit the pause button!

I looked through win96 but couldn't find a way there

Thanks

Doug

Yummy, carrots. I also like http://tinyurl.com for shortening up those long URLs. They even have a teeny applet down at http://tinyurl.com/#toolbar you can drag to your bookmarks bar; when you're on a page you want to shorten up, just click on that and it'll create a "tiny url" for ya whenever you want one. (In IE6 you have to do it by "add to favorites")

F'rinstance, the tech specs page for the Pro-96 is at http://www.radioshack.com/product/index.jsp?parentPage=search&summary=summary&cp=&productId=2036238&accessories=accessories&kw=20-526&techSpecs=techSpecs¤tTab=summary&custRatings=custRatings&sr=1&features=features&origkw=20-526&support=support&tab=techSpecs

but TinyUrl makes it http://tinyurl.com/37aq5o and they seem to remain good indefinitely, unless the real URL changes, of course.

There are a couple other similar sites around.

You don't need a program. You can copy and paste from one
program to the other. Or export it to a csv file and import that back
into the other program. Simple as apple pie.

I too, have both a Pro-96 and Pro-97 and do this all the time.

Mark, N8ICW

Not in the way you're thinking. You have to bring the v folder up as the active folder, then clone it, then store it in the cloned scanner v folder and then copy the next v folder. It's easier and quicker to use Win96 however.

Subject: [PRO-96] Will cloning Pro-96 copy V-scanner as well?

Hi,
Mu name is Scott and I'm new to the group. I was just curious if I cloned my radio to another, would it also copy the V-scanner data? That info didn't seem clear in the manual.

Thank You,
Scott

Actually its very easy, I use Win96 here at this station to update
V-Scanner in a Pro-96 then use it to clone V-Scanner in an in-dash
mounted 2096.

Page 83 in OM provides clear instructions for cloning V-Scanner Data.
Choice of Full Clone or Selective Clone is available.

Do you /want/ to copy the V folder data as well?

If you just connect the two units together and press the up and 1 keys, the V folders won't be affected. You can do some extra steps that will transfer some or all of the V folders if you want this transferred.

Gary,

I was going to ask the same questions as Mark did, but he just took
care of that. So I'll address something else... LOL

You're saying this is your second request?? If you had posted this
question before, it wasn't sent to this board since your last post
was #7504.

MFJ makes a dual band ham antenna (2M and 440) that works just fine
with my PRO-96. Not great below about 140 mhz, but does great on 800!
Runs about $15. I don't have the stock number, but most ham radio
stores carry them. You can also go to www.mfjenterprises.com and scope it out.

I checked the closed mode so that I only hear the programmed talkgroups. Anyway, that is what I thought I was doing. So I'm listening to my programmed fire channels, here in Minnesota, but the snow plows keep coming and boy do they talk. I never programmed in their talkgroup nor do I want to listen to them. I want to listen to the fire talkgroups only. I can "pause" on one fire talkgroup but there are times I want to listen to multiple groups. How do I get rid of the snow plows? I don't see anywhere that I even have their talkgroup ID programmed into my scanner. This happens on other banks also. My police channels sometimes have transit buses or cabs or some talkgroup I do not recognize. Maybe I don't really understand "closed mode" or "open mode". Can anyone help me or explain what is happening?
Brad

Your correct on the closed mode. Closed should limit traffic to those talk group ID's that you have programmed in. Are you using Win96 to program your scanner. If so, hook up and read the scanner data and make sure "closed" is checked. Maybe you change it in the win96 file but did not copy the changes to the scanner. When listening to one of your TG ID's, (as well as one you don't want to hear), check the display, (see file section "96display.pdf"), for the mode. Open is +, closed is -. I hope you get it working.

One thing that might help: when scanning, look at the pluses and minuses below the bank numbers. Closed banks show a minus(-). Open ones show a plus(+). Banks that are turned off don't show anything.

Also, are you sure some of these talkgroups aren't used for anything else besides what you are listening to?

I had trouble with that, too. I don't recall if I fixed it except for checking the box on each bank in Win96; that works for sure.

Topic: 12258 Message: 12258

Recently I had the unfortunate occasion to drop my Pro-96. When it hit the ground the little plastic tabs on the chassis which clip to the tabs on the battery cover broke off.

I discovered I have to buy a new Chassis cover RSU Part # 12410809.

Unfortunately every time I check with my local Radio Shack they tell me that they cannot order it at this time, to check back in a few weeks.

Anybody have any contacts, or information on how to order this part?

thanks,
Jack

Hey Buddy: I've had my pro-96 for about 3 years up here in Ottawa. Fleetnet sounds perfect on it. I've not found any glitches *yet*.lol
I've actually compared it to a couple of the uniden units, and the digital, as well as analog audio quality is much better on the 96.

Thanks all for the info.

After following fmonix's advice. Page 83 of the manual did indeed offer the necessary steps to clone all data, including the v-scanner folders. Win-96 is awesome to use. I'm guilty about not fully scouring the instructions manual.

I love the V-scanner feature. It's what I'd want in any future scanner. I assume the next gen will have SD card slots to have gigabytes of data available.

From: takimes
Topic: 12263 Message: 12263

Has anyone had any bad dealings with RS repair center. I sent my Pro-96 in because the on/off POT was bad. It's out of warranty. I took the case off and checked looking for a bad connection or something obvious. What I found was that if I twisted the POT switch I could get it to work momentarily. The circuit board wasn't cracked or anything. Any way to bet to my point I got a call with an estimate of $349.00. I tried to return the call but they were closed. Obviously I'm none to happy. Just was curious if this is typical for a repair estimate?

Mostly just venting, but interested if others had the same experience.

It's hard to believe that just a POT could cost that much to repair.
Are you sure there isn't something else wrong?

I had a problem with the POT on my Pro-96- more related to volume control issues. I had read on his thread before this happened about long delays with Radio Shack service, so I ordered a new POT for my Pro-96 for around $20 and had a radio technician friend install it for me for $25. If you know someone who can do the work I'd go this route as long as you are sure it's only the pot.

Just my experience.

There is a CB repair shop here in St. Charles. I know that they work on scanners too. I had them do some work on my old BC 200 they did a fine job and it was a very minimal cost as well. You may want to check that out? With that much money changing hands I would certainly get a second opinion.

I can get the name and number of the place if you are interested.

Thanks and good luck!

Repairs to scanners are 49.00 labor, plus whatever for shipping, plus parts. Its obvious that there is more than a pot out on your radio. I would not put that into repairing one. You can buy just the pot and have it shipped to your home, then you could install it. They are simple to replace.

12269. WIN 96 question

Subject: RE: [PRO-96] WIN 96 question

XP yes, & no, have not done any memory updates/changes for some time or done anything with any of the cards. Same for any drivers, recently at least. But don't know how long this WIN 96 problem has been there, have not had any reason to use the Bank Editor for some time. As for MS updates, yes, they come up regularly on auto check, but I do not have it set for auto install, I always want to see what they are trying to put into my computer.

I have not had any problemusing that, I am on version 01.54. Updated awhile ago so that I could load directly from the Radio Reference site. I you don't have all the updates to XP and the newest version of Win96 I would do that first to see if it fixes the problem.

Checking to see if anybody else has had this problem with WIN 96, or if this is something local to my computer.
Any thoughts or ideas?

When I click Bank Editor under the EDIT pull down I get the following error message:

ERROR

Error: Access violation at 0x73DD425E (tried to read from 0xFFFFFFF5), program terminated.

OK

Then when I click OK the program obviously quits. Everything else seems to be working fine on the program. I have the latest version.

Thanks for any help/ideas.

Brian

About XP updates, I'm a believer in doing them now. I was skeptic on doing the updates because I feared messing up my computer. I felt since everything was running fine, why chance making a problem. Eventually I started having errors. They were not constant errors but annoying. I learned from a fellow ham, who is very good in computers, told me that as long as I had a valid copy of XP, I would not have any problems doing the updates. So I did them and the errors went away. Now when I get the auto updates I install them and never had a problem after installing them.

Oddly enough the estimate wasn't $349, it was $439. I couldn't find anyone at the repair center who could explain what was actually wrong with it that would cost as much as replacing it. To make a long story short I told them to send it back, which they did. A guy at the local store messed with the switch on his own and now it works fine, for now at least. So I had to pay the $20 for the inspection charge, plus the $15 shipping. Good news is that I got it fixed? for now. Probably won't be buying RS products in the future. Poor customer service and high prices have always been their reputation, which the re-enforced with me. I'll get off my soap box... I'm done ranting and raving...I feel better now.

Repairs to scanners are 49.00 labor, plus whatever for shipping, plus parts. Its obvious that there is more than a pot out on your radio. I would not put that into repairing one. You can buy just the pot and have it shipped to your home, then you could install it. They are simple to replace.

Congratulations on buying a Pro-96!

The good news: This scanner can do nearly anything you want to do. (Neither it nor anything else on the market can do GE's digital trunked.)

The bad news: This scanner is smarter than the average user. Here's what's different from (at least my) previous scanners:

1. You need a computer program to program it (download Starrsoft's Win96--free for 30 days; you also need a cable such as RadioShack's p/n 20-247).

2. You're well-advised to download a file for your area. You can probably get something from this group's files, or you can join RadioReference.com, or maybe there's a group for scanner users in your area. (Attn members of this group: Anyone in Scott's area who can help him?)

More good news: You don't have to have much more than a clue about how all this trunking stuff or your Pro-96 work; people who do have done all the work for you.

If I'm reading correctly, you don't own a computer. I think you'll need to either get one or get a friend to let you use his/hers for programming your scanner. Difficult situation, but not impossible.

A brief summary of what's different from the "old way": Used to be we wanted to listen to a station, we tuned into its frequency. In trunking, we need to program the entire trunk system (complicated and tricky) and then the talkgroup is everything from there; makes the difference between hearing police or fire calls or hearing the sanitation workers. The owner's manual tells you some about this, but software and downloaded files do it all for you. Pick your talkgroups for what you want to listen to and you're in business.

Without knowing the band you're trying to listening to I'll just say that I'm sold on the Diamond RH77 series for UHF and 800 MHz with my Pro-96. Most of my listening is to UHF digital multicast or single-site transmissions, though. The handful of simulcast frequencies I monitor are also UHF digital, but they're *very* well synchronized, and come in with little if any distortion, e.g. none of the typical overlap and multipath issues so common with digital.

The multicast P25 systems to which I listen don't have any particular problems other than weak-signal dropping, and the RH77 pulls them in nicely. I'm almost wanting to say that a less efficient antenna might be something to try if the sites are *simulcast* and are beating each other up at your location, but that's not a very elegant solution.

From: newnethboy
Topic: 12289 Message: 12289

In the thread on "Good Portable Antenna?", Radio Lady mentioned synchronization, and that causes me to ask about something I've experienced.

On Trunked Radio Systems I hear two different phenomena besides good, clear transmission: 1. Something that sounds like a tape recording being fast-forwarded (like in the movies, not muted as in a real tape player), 2. An echo, repeat of the transmission about 0.1 sec behind.

Actually, I've had a third, a tinny sound quality, but that is infrequent now.

This is on So. Cal. ICIS, the only TRS I monitor regularly; don't know what would happen with others, whether this is my programming, my scanner, or this TRS.

Here's what you're going to need to successfully program that scanner (which, btw, programs very nearly identically to the Pro-96):

1. A computer (Windows)
2. A RadioShack adapter cable p/n 20-247
3. Win96 software--downloadable from http://www.Starrsoft.com/software/win96
(4. Optional but very helpful: A downloaded file of the settings for your area, namely Muncie IN)

I'm guessing some kind member of this list will need to go to your father's house with all of the above and program the scanner.

Pro-96 / Pro-2096 users in Muncie: Let's show these folks what a great bunch you are!

You are correct to be suspicious as the Muncie Police talkgroup in Emergency Radio Service (800 Mhz) list a 5 digit (57600) DEC number. However, all size codes are S4 which would produce errant data on line 4 if scanning open mode, and may not ever work if scanning closed mode. Refuse Pick Up has the same error.

Having said the above, Muncie may be totaling using the SAFE-T system according to the DB page. Delaware County has 54 talkgroups and 20 of those are for Muncie. You would need site 120 freqs and if you have doubts regarding correctness of Controls...uncheck the CC only box prior to import. BTW, site 120 is just south of W18th in Muncie.

If you selected Upload to Scanner or (Ctrl U), the software can NOT do anything but overwrite the data in scanner working folder (Main Memory) with exactly what you saved in the open Win96 file. PERIOD!

Reopen the file (Win96) and check in Settings/Weather tab that at least one of the bullets are selected under Enabled Scan Banks. All or any can be selected.

If you use the Starrsoft programming software, there's a checkbox on the main screen that says, "Extended Frequencies". Check it, load the file into the radio (be sure you have programmed whatever frequencies into the software that you want) and it will allow tuning of mil-air frequencies.

Topic: 12298 Message: 12301

I think it should be pointed out that while the Pro-96 will receive milair when set up to do so under Win96, the sensitivity in that range is greatly reduced from other, more common, frequencies. I can't remember where I saw a test chart of this. It might have been on www.strongsignals.net. A web seach might also produce the data.

None the less, I have mine set up to receive that band.

73,

-Larry (KG6EJT)

From: sobers6
Topic: 12302 Message: 12302

Hi, I have a pro 96 and it was working fine. I have about 5 freq. in bank one. I must have hit a button because bank one is blinking with a plus sign under it and it will not scan thru the channel. I can manually scan thru but it will not auto scan. If someone knows how to fix this please!!! let me know.
Thanks, Linda

You could try turning the scanner off, take out the batteries, then put batteries back in and turn it back on see if that helps. Did this by chance happen after using the AC adapter??? This has happened to me, corrected after shutting off and turing back on.

Hi Ryan,
I tried turning it off and then on, it didn't work. I use the power plug only so I don't think it would be the batteries. It happened to me one other time and I was with someone who took it from me, pushed a button or two and handed it back to me working fine but he never showed me how he did it. Trying to get a hold of him is not easy so I came here for help.
Thanks, Linda

Frank,
Thanks for the feedback. I am still perplexed as to why I am not receiving the frequencies. It is a very busy town so I am sure it is scanning but not picking up.

It sounds like there is only one bank selected AND the bank is set to CLOSED and only those "Talk Groups" listed will break squelch and I'll bet there are no "Talk Groups" in memory. So it would sit there scanning & looking for a blank talk group.

I don't recall how to set the bank to OPEN, but I know someone else here will.

Func 5 - will toggle between open & closed Talkgroup mode. Just manually select a channel in the bank - & then press Func followed by the number 5.

12310. Re: bank won't scan

Yahoo group: PRO-96 (2008 — 2017)
Date: 2008-03-08 21:26:55 UTC
From: newnethboy
Topic: 12302 Message: 12310

I've been following this thread and I think we need more information.
To answer well, we need to know:

1. Confirming you have only one bank turned on (only one number is flashing)?
2. What's in the bank you say is flashing? You said 5 frequencies: Conventional, or a trunked system? If trunked, what kind of system?
3. What happens if you turn on other banks? Do you have programming in them?
4. When you go manual on bank one (the one you said has 5 frequencies in it), what do you hear?

What seems clear so far, if I'm reading you right, is that you have only one bank one number showing, with a plus under it. That means you're scanning only the one bank, and trunking is set for open (meaning that if that's a trunk system you have programmed in the bank, you should be hearing everything from garbage trucks to police dispatch).

For your scanner to work at all, I believe it must have at least one bank on and at least on frequency in that bank on. You seem to have that condition met and it is scanning through that one bank.

Have you switched to manual, entered the bank you're talking about, and checked to make sure the correct frequencies are still in there and not locked out? (If they're conventional, locking any one out means it won't be scanned. If they're trunk, locking out the control channel means you'll hear nothing on that system.)

Once you give us more info, surely someone here will be able to take you right to the problem and how to fix it.

I have heard the same, but nothing 'official'.

The Pro-96 is a fine scanner but with the recent offerings from GRE and the potential of a new Uniden digital scanner, I would imagine its safe to assume that the Pro-96 is at the end of life. Its a fine scanner, but its really showing its age. Even when I purchased my Pro-96 new about a year ago I could already feel that its days were numbered...its just huge (Pro-96 is just a massive brick compared to a 996..) and its interface is very dated...time for a change...

That said: I am not really impressed with the new GRE units...I am very much looking forward to what Uniden may offer in the next year.

The PSR-500 is a fine radio and all, but considering the BCD396T has been out for over three years, I just expected GRE to raise the bar a little higher. Just a little late to the party IMO.

From: Ron Little
Topic: 12324 Message: 12324

A couple of things I would like to see in the future scanners are:
1) An SD ram chip that would allow more flexible scanner use. (e.g. a chip for local use, one for your vacation, one for those business trips out of state, and one for experimenting.) Or perhaps the ability to choose which file from a menu on the scanner.

2) A bluetooth earbud for private listening.

3) An "FM" transmitter so you could play it through your radio.

Comments?

Ron

From: Rick Bates
Topic: 12324 Message: 12325

1) There are v-folders for that in the GRE line, work great, nothing to lose or misplace, no computer needed to swap data.

2) Perhaps useful, but why stop there, use it to interface with the computer for programming. And the dorky earpieces are one more thing to charge.

3) Having dealt with that for iPod, I find it a royal PITA. There is always some interference as you travel around. If you're in the boonies, it works great. In a metro area (central valley to SF Bay area), it's a bother to keep changing frequencies as you transit an area. Then there is the case that you also want to hear the GPS (some talk to the FM), WHILE listening to the iPod, WHILE listening to the scanner (in short, it won't work well). At least my new truck has the wired iPod input and built in nav (all works together).

A followup: Something that would please me is a drop in charger with external antenna port and speaker output. Think of the cell phones of a generation ago, take it off your hip, drop it into the car base unit and all is good. A leather case would be nice too, from the same source.

I'd also like to see small electronics have a data output port (USB would work) to talk with the car computers so that multiple data sources could be seen on the console. You could see who is calling you on the phone, what channel you are scanning and whatever other device you might want to link in. But that would take some cooperation from a LOT of companies unless one car company wanted to take the lead on it.

And for travelers, how about a GPS built in that automatically scans different sets of frequs within 10 or 15 miles of your location as you travel. You would set it to scan the desired services and bands that are of interest to you.

A followup: Something that would please me is a drop in charger with external antenna port and speaker output. Think of the cell phones of a generation ago, take it off your hip, drop it into the car base unit and all is good. A leather case would be nice too, from the same source.

I'd also like to see small electronics have a data output port (USB would work) to talk with the car computers so that multiple data sources could be seen on the console. You could see who is calling you on the phone, what channel you are scanning and whatever other device you might want to link in. But that would take some cooperation from a LOT of companies unless one car company wanted to take the lead on it.

You would have to have a way of updating the frequency list almost monthly. Plus the GPS part of it would easily run your price tag to $1000 or more. Not going to happen in todays economy. Plus the fact that having a mobile scanner is illegal in many states. Not gonna happen.

Uniden already offers this excellent feature in the BCT15 and the BCD996T. It requires the use of an external GPS connected to a serial port...does not have a built-in GPS.

No, not really.

The feature adds no cost to the scanner if you don't use it. Need to use it?
Fine...plug a $100 GPS into the scanner and its running.

One of the cheapest NMEA-0183 compliant GPS I can find is 200 bucks. Thats a no frills basic Garmin. From reading the manual for the 996, it looks like it takes a common data protocol for the radio. With the radio at 544.50 (Uniden website) and another 200, you are at 750ish. By the time you buy the cable for the GPS and all of the shipping to get everything home, your at 800 instead of 1000. Thats IF you get just a basic GPS. If you don't like the handheld, then figure more money with the sky being the limit. Again, I can't see many going this route.

What frequency database(s) do the BCT15 and BDC996T use in conjunction with the GPS feature? Do you download the data from, for instance, RR or the FCC and then edit it to fit your needs, and then update it from time to time, or what?

I see the Dangerous Road, Dangerous Xing, and POI in the manuals, but not the frequency sources.

There are GPS units <$100 that are suitable for the task.
Garmin GPS18-PC is one such model.
Everyday retail for the 996 is $499.95 at most etailers.

Building the GPS into the scanner would still require an external antenna for receiving the GPS signal (they don't usually make it into or under the dash, where many scanners are mounted).

RadioReference is in the process of adding geotags to all the sites and systems in the database. Once that is finished, you'll be able to get that info directly from there. For now, you use some mapping software in conjunction with the RR.com database. Time consuming until the data is developed out to be rich enough to use, but I never have to press a button as I drive through DFW to turn on and off any of the 30 or so agencies I have tagged.

But wait, this is the PRO-96 board. Maybe this part of the discussion should hop over to the 996 (or 15) board.

You can get a eTrex for $90, and frankly, I really don't know anyone who does not already have a GPS, so most people just use what they already own. I think its pretty safe to say that if you require the GPS features, you probably already have a way to feed GPS data to the scanner.

> From reading the manual for the 996,

Well, nobody pays 'retail' for scanners, I got my BCT15 for $205. And for cables, the are cheap, I think I rigged up a cable for my etrex for under $20.

Point is: Features like this don't add cost to the scanner, its all software, and if you need the feature...who cares what it costs? Its just not that much money. Now, I can understand that it would drive the price of a unit up if the GPS was built in, but that's simply not the case here. You need it, fine, set it up and use it...don't need it? Don't use it, wont cost you a dime. Like you said, most people don't need this feature anyway, but those who do really get a lot of use out of it. Its a nice option to have.

If the audio from the scanner is fed to a cassette adapter or other input to modern car stereos the car stero will play the scanner audio. I use an adpter like this for my XM sattelite radio. What can cause feed back? The scanner speaker is muted when an external speaker is used or the suggestion I made to plug the sound to the stereo of the car. What is causing any feedback?

Feedback is generated when a transmitter is keyed next to a receiver and the squeal starts when the receiver hears the transmitter close to it and the transmitter involved retransmits its own transmissions. That is confusing, sorry.

I have a Radio Shack Pro 96, it is about 3-4 Years old and quit recieving the other day and noticed the jack was just a little loose. I took the scanner apart and found the main lead to the BNC disconnected. Has anyone else had this problem. Did you fix it yourself?? There is a cover over the top of the connection that is soldered on. I figured I would just have Radio Shack fix it VS me screwing it up. I took in to Radio Shack, they told me "There isn't alot we can do for you" pretty much didn't care to see me walk in the store. Don't know of anyone locally that does that sort of stuff. Just looking for any information of who I could send before I get the nerve to tear it apart and try to fix it myself.
Thanks

Hi Dave,
GPS is now included in many give-away cell phones.
Every so often you would update the scanner location/ frequ database with radioreference.com.
The database includes long and lat coordinates as well as frequ and user.
Maybe the scanner has wireless 802.11x and automatically connects to your PC for these updates.
Many anti scanner laws exempt Ham Radio operators. A Ham ticket is now easy to get (no code).

I would personally like to see the scanners be able to receive the ID of whoever is transmitting, and then let you tag an alias (text) to that ID, so you know who's doing the talking. I could do without the top 2 lines of display on my PRO-96, I really don't need to know what frequency I'm presently receiving on, and don't really care what the channel number is, or if it's MO, DG, FM, CT, DC, ED or AM. With talkgroup ID's tagged, what difference does it make what frequency/channel your receiving (on a trunked system)?

12356. FW: [PRO-96] Re: Future scanners

Yahoo group: PRO-96 (2008 — 2017)
Date: 2008-03-11 21:11:27 UTC
From: jackandrisin@sbcglobal.net
Topic: 12356 Message: 12356

Hi Dave,
GPS is now included in many give-away cell phones.
Every so often you would update the scanner location/ frequ database with radioreference.com.
The database includes long and lat coordinates as well as frequ and user.
Maybe the scanner has wireless 802.11x and automatically connects to your PC for these updates.
Many anti scanner laws exempt Ham Radio operators. A Ham ticket is now easy to get (no code).
Jack W8JAK

Subject: [PRO-96] Re: Future scanners

> And for travelers, how about a GPS built in that automatically scans
> different sets of frequs within 10 or 15 miles of your location as you
> travel. You would set it to scan the desired services and bands that are of
> interest to you

You would have to have a way of updating the frequency list almost monthly. Plus the GPS part of it would easily run your price tag to $1000 or more. Not going to happen in todays economy. Plus the fact that having a mobile scanner is illegal in many states. Not gonna happen.

4) And how about a recording chip built-in to the scanner that plays back
tranmissions (on selected channels perhaps) that you didnt hear because the
scanner was on another channel? It would also let you replay transmissions.
Maybe even DL them to your PC.

Subject: [PRO-96] Future scanners

A couple of things I would like to see in the future scanners are:
1) An SD ram chip that would allow more flexible scanner use. (e.g. a
chip for local use, one for your vacation, one for those business

trips out of state, and one for experimenting.) Or perhaps the ability to choose which file from a menu on the scanner.

2) A bluetooth earbud for private listening.

3) An "FM" transmitter so you could play it through your radio.

Comments?

Ron

From: thaiscanla
Topic: 12348 Message: 12360

I had the same thing happened and fixed by soldering a 1/2-inch long flexible wire in place of the hard wire that broke. I am not an expert solderer/desolderer so I made quite a mess removing the metal covers that cover the area where you'll need to work but all-in-all the scanner works fine. In fact, after the repair the scanner had better reception (I think).

Good luck but be careful. It's a $400 gadget your fixing and the small components and circuit boards don't like heat.

Bernard

12362. Power Connection Problem or Battery Problem

Yahoo group: PRO-96 (2008 — 2017)
Date: 2008-03-12 05:23:03 UTC
From: Mike L
Topic: 12362 Message: 12362

When I unplug the power to start using battery the screen goes blank, I was just running it on battery yesterday so I think they are still good,

Is there some kind of switch in the powerplug hole that pops up once the cord is removed that may be stuck down, or should I get new batteries then reevaluate??

Any ideas here ?

THank you in advance for your help

Mike

12363. RE: [PRO-96] Power Connection Problem or Battery Problem

Yahoo group: PRO-96 (2008 — 2017)

From: Rick Bates
Topic: 12362 Message: 12363

There is indeed a switch in the power plug to allow either power source, battery or ac adapter. If you unplug the adapter and it blanks, simply turn the power off, then back on. If the batteries are still good, it will still work. Most electronics don't like a power blip, in this case the scanner quits if you simply unplug the power source.

Topic: 12362 Message: 12364

Yes there is a switch. If you are lucky, you mught be able to apply a small amount of contact cleaner on the jack/switch assembly. It is best to open the scanner to do this. Rather than squirt the stuff in, I saturate a Q-tip or get a drop of it on a toothpick and apply it. Then work the plug in and out of the jack. Use sparingly, that stuff creeps all over and can get into the display.

I have heard that this problem is more likely to occur if the incorrect plug is used.

Good Luck,
Jack

Hi Paul.
You could... just make a scanner that is also a cell phone. Maybe it would receive scanner frequs over the air, or maybe it just "scans" multiple streaming audio "live feeds" of public safety systems etc. (I can currently do this on my iPod with a plug-in "air card" type modem, but I cant "scan" multiple services...that would be nice).

The point of my mentioning "give-away" cell phones was expressed in a previous email:
"Again, cell phones are now give-away items. If the scanner would use standard cell phone chips for the "tivo-scan', and "GPS/frequ list" function that I described earlier, costs could be kept low. "

BTW is RS going to replace the Pro-96/2096 with a new model, or begin selling another brand ?

The only problem is Paul's point. Cell phones are not cheap. They cost a lot of money to make. The Cell companies give them to you only because they know they will make up the loss (plus much more) in monthly charges.

Get one, and break it. Then see how much a phone really costs.

In addition to Joe's reply, you should note that many if not most cell phones only have 1/2 of the GPS solution on board. The other half (the expensive half) is in the cell site towers. It is called aGPS (assisted GPS) IIRC and requires the phone to affiliate with a site to get the complete GPS solution.

I have no insight to share on RS's future model selection. (When you find out, though, I'd love to hear... :))

What happens with the Pro-96, unlike my old Pro-23, is that the computer shuts down when the power is interrupted for the slightest moment (your desktop computer will do the same thing, which is why you need a UPS). For 11 years I unplugged and re-plugged my Pro-23 without turning it off, but the Pro-96 won't do that.

The switch that changes you from battery to adapter when you plug or unplug often will interrupt the power for longer than the computer can live without. Personally, I don't see why they couldn't have built this thing with a little capacitor to hold the power that long.

Besides this inconvenience, you run some risk of destroying your expensive equipment. See topic #11921 Dec 7, 2007 4:15 pm and the answers I received to my rant.

12370. RE: [PRO-96] Future scanners

Yahoo group: PRO-96 (2008 — 2017)
Date: 2008-03-12 21:57:17 UTC
From: jackandrisin@sbcglobal.net
Topic: 12324 Message: 12370

Hi Joe and Paul,

A scanner with GPS wouldnt need the entire GPS system since it is just for roughly locating the scanner and would not need the User Interface etc.

I picked up a basic handheld GPS at RS for $50 18 months ago, and it includes the screen, keyboard, associated drivers, etc; items which already exists on a scanner. There are also relatively inexpensive FRS radios available that have GPS and can xmit your Coordinates to another FRS radio.

My point was that the technology and hardware already exists and is already manufactured in very high volumes which considerably lowers the cost.
Once the cellphone and chip mfr's pay the development, capital, and tooling costs, the actual chip costs are low. Fortunately, silicon is very abundant on this planet.

Is there a yahoo group for facts and rumors about new scanners, or scanners of the future?

Jack

12373. Re: [PRO-96] Future scanners

Yahoo group: PRO-96 (2008 — 2017)
Date: 2008-03-13 12:48:24 UTC
From: Paul Opitz
Topic: 12324 Message: 12373

Actually, without a full GPS system, you get no location. Adding a full GPS receiver to a scanner would result in about a $80 retail cost up based on todays technology costs. (If you check out those FRS/GMRS radios w/GPS, you'll find about the same delta...slightly more since a FRS/GMRS does not typically have a full display.)

Cell phone chips are, unfortunately, quite specific in their scope of function. In general, they are not adaptable to 25-1300 MHz receive at a variety of bandwidths.

As to "Is there a yahoo group for facts and rumors about new scanners, or scanners of the future?" It has been my experience that the answer is "All of them." :)

Paul

i have only had my 96 for 2 weeks but have been haveing alot of interfearence by pagers and stuff. Iam running the same antenna set up as i had on my uniden 250d, so why is radio shack wiped out by pagers over riding everything.

12375. RE: [PRO-96] Future scanners/Upgrades for the PRO-96 ?

Yahoo group: PRO-96 (2008 — 2017)
Date: 2008-03-13 17:36:34 UTC
From: jackandrisin@sbcglobal.net
Topic: 12324 Message: 12375

Hi Paul:

So I guess the Scanner/GPS idea would only work (technically and economically) with my super convergent cellphone/scanner idea ? :)

I wasnt really thinking about using the cellphone chip as the receiver, but perhaps using the cellphone chip receive freq as the IF. I remember using an old UHF TV tuner to tune the "new" 450 MHz Public Safety Band (and later the 800 MHz Band), so I could receive those frequs on my Low Band VHF receiver.

Previously Paul wrote:

"I have no insight to share on RS's future model selection. (When you find out, though, I'd love to hear... :))"

Right Paul, I understand that you have nothing you can share on this. (And Yes, I would be at least the second person to let you know :))

* *
* * *

Since it appears that there will be no new and improved successors to the Pro-96/2096, does anyone know of any new third party upgrades for the '96 that will increase its functionality (a'la Win 96) ?

Regards,
Jack

This is normal for a lot of GRE built scanners, the selectivity is
not as good as the Unidens (GRE's have a pretty hot front end). I have
a 96 and 2 -2096's and have the same problem when connected to an
outdoor antenna. I use a PAR notch filter for the base which helps a
lot but they still get de-sensed some.

Hopefully the problem will be short-lived. In my part of the country, pagers are almost extinct. I honestly don't know anyone, other than emergency personnel, who carries a pager any longer. Most of the troublesome old frequencies are silent these days. Somebody would probably get annoyed if I said "good riddance," so I won't.

12382. Radio Shack Assistance on Scanner Firmware?

From: John P.
Topic: 12382 Message: 12382

Hi,
Has anyone found a way to get to a 'real person' at Radio Shack to discuss the need for a new firmware update for the multicast/simulcast digital systems that the PRO-96 can barely decode? It is usless as a portable, and barely passable with a yagi antenna. This is in the middle of a dozen towers too, so signal is not an issue.

My emails get returned with the usual "Go to your local Radio Shack store and they will help you".
Well, I did that, and the assistant manager was baffled - 'yeah, that does sound crappy - you're only getting bits and pieces of the audio - maybe they're trying some new frequency hopping method'. Needless to say, he was no help.

From: Rick Bates
Topic: 12382 Message: 12386

There are a few versions of firmware available. Don't expect another edition to come out since the radio will be dropped soon from the RS line (not being made any more and superceded by the PSR-500).

So, try one of the other firmwares, you can switch as often as you like to see which works the best.

But using a Pro-96 with a yagi is asking for trouble too. Presuming you have decent signal (and not too much of it), they are very easy to overload (bloody hot receivers) and using an external antenna is problematic. Try the stock antenna (or single band "rubber duck" antenna) with the ATT turned ON (lower the signal) and play with that to see if it helps. If you have easy access to 12 towers, I'd also suspect that you have multiple packets arriving and blocking each other (multiphase distortion) which decreases the decode rate.

Recap: Try the other firmwares that are out there, try lowering your signal strength with use of the ATT feature. Further questions should be brought here, because most RS stores are filled with folks that can't even make change (exceptions happen but are rare).

I've used it with a simulcast system and it worked quite well, so your case is not the norm.

I don't have the answer to your question, but the first thing you did wrong was bother going to the store with the assumption that anybody there would 1)know what you were talking about & 2)have any idea how to help, besides knowing how to run the register (& even that is hard sometimes).

No it won't break the squelch, using the tone hides the issue entirely. The intermod is still there, blocking what you want to hear (head in the sand syndrome). You simply don't hear the crud (or what you want to hear).

Using the ATT may help, using a smaller antenna may also help (they are REALLY hot receivers and don't usually need much more antenna than what they came with, unlike other brands). You will have to find the right balance (or add filters to block the offending signals) to get it 'right' for you.

123.0 is a standard tone. You put the channel in CT mode (doing this from memory) which will let it scan the tones when that channel is active. When the display reads 123.0, press ENTer and it will be locked to only that tone. Of course if you're using software to program it, enter the tone there and change the channel to CT mode.

It's possible of course, but hams talk during the day too. :-)

You may have to put a filter in to block it. There are cheap ways, there are better ways. Either method will require you to know what has to be blocked.

From: jackandrisin@sbcglobal.net
Topic: 12374 Message: 12400

If you are hearing two different transmissions at once, you could be hearing an intermod product, that is, one station's xmit frequ "beating" with another station's xmit frequ, to create interference on a third frequ (the intermod product). The beating could be taking place in your receiver, at the transmitter site of either station, or in another unrelated location.

When this happens, you only hear the interference on the third frequ when BOTH transmitters are xmitting at the same time. At my location, this usually happens when one of the stations is a pager xmitter. An rf filter in your ant line for the paging xmitter may help this problem if the beating is taking place in your receiver. If beating is not located in your receiver, an rf filter will not eliminate the intermod (but still may reduce the desense of your receiver caused by a strong pager signal.)

If you can ID the two stations, the site manager engineer, or in the case of a ham receiver, the license trustee of the station or repeater, can determine if the intermod product is taking place at their transmitter location. It may not be their fault, or out of their control, but they still may want to help you out.

Interference like this can also be caused by a poor ant connection, acting as signal "detector".

Also, the Pro-96 is very sensitive. Depending on what you are trying to hear, an indoor ant, like a mag mount mobile ant stuck to a file cabinet, or even the stock duckie ant, may receive as well as the outdoor ant on the 250d.

Good Luck,
Jack

I am trying to do a web import from Radioreference.com into Win96 which I have had no problems with before, but I noticed this time that when I go to the web site and look at the list of frequencies, there are 10 listed for the trunked system I am trying to monitor, but when I start the import, and get to the selection screen, there are only 3 listed! Any idea why this might be happening?

Also just to make sure I understand what I have read here correctly, it is my understanding that you can only have one site from a simulcast system in a bank, unless the other site is separated by a non-trunked FM frequency, right?

And finally, if two cities/counties are using the same system, but have multiple sites, each city (or more precisely each radio) will only transmit/receive from one site at a time, correct?

Thanks,

Brent

Is the "CC Only" option in Win96's Web Import dialog checked? If so,
you'll only see the control channels.

I don't know how that got checked, but that was the problem.
Thank you!

Sent: Sunday, March 16, 2008 7:45 PM
To: PRO-96@yahoogroups.com
Subject: RE: [PRO-96] Re: Interfeareance Troubles

If you are hearing two different transmissions at once, you could be hearing an intermod product, that is, one station's xmit frequ "beating" with another station's xmit frequ, to create interference on a third frequ (the intermod product). The beating could be taking place in your receiver, at the transmitter site of either station, or in another unrelated location.

When this happens, you only hear the interference on the third frequ when BOTH transmitters are xmitting at the same time. At my location, this usually happens when one of the stations is a pager xmitter. An rf filter in your ant line for the paging xmitter may help this problem if the beating is taking place in your receiver. If beating is not located in your receiver, an rf filter will not eliminate the intermod (but still may reduce the desense of your receiver caused by a strong pager signal.)

If you can ID the two stations, the site manager engineer, or in the case of a ham receiver, the license trustee of the station or repeater, can determine if the intermod product is taking place at their transmitter location. It may not be their fault, or out of their control, but they still may want to help you out.

Interference like this can also be caused by a poor ant connection, acting as signal "detector".

Also, the Pro-96 is very sensitive. Depending on what you are trying to hear, an indoor ant, like a mag mount mobile ant stuck to a file cabinet, or even the stock duckie ant, may receive as well as the outdoor ant on the 250d.

Good Luck,
Jack

12405. PRO 96 & changes to the Glendale Ca ICIS system

Yahoo group: PRO-96 (2008 — 2017)
Date: 2008-03-17 06:41:31 UTC
From: mikkut
Topic: 12405 Message: 12405

The Glendale site of the ICIS system recently added 4 additional frequencies to the original 10 frequencies. Since the 4 new frequencies were added whenever a transmission occurs on one of the 4 new frequencies the scanner switches to a non-system frequency such as 471.600 (among many others), the talk group alpha tag displays correctly but the non-system frequency flashes and there is no audio ... however when a transmission occurs on one of the original 10 frequencies there is no problem ... I tried programming the alternate trunking table (as listed on RR) to 480.5000 base 12.5 step 380 offset with the result being that the 4 new frequencies work fine but now when a transmission occurs on one of the original 10 frequencies the scanner switches to a non-system frequency .. any suggestions on what might be the issue here?

I haven't looked at RR for the current info (I'm 400 miles away, if you're talking about Glendale, CA, I know of at least 4 others in the country). Obviously, there is a table change because of the new control channels at least, perhaps multiple tables are involved.. Your test proves that out.

Since you're listening to T band (470-490 MHz) it is highly likely that there are multiple tables involved.

If you're programming with Win 96 (and you should) perhaps enter both tables (extended tables) but pay close attention to the channel low and high for each table (that info tells the receiver how far to jump and from what base frequency depending on which channels it's told to use).

In very simple terms, the control data tells the receiver for the active talkgroup to use channel ### (say 390 for an example). The table is the lookup for channel. If the table says channel falls in the range of 380-640 (as an example), it goes 390 steps (of 12.5 KHz in your case) from the base frequency for that line in the table. So if the table is not programmed properly, it won't work (you won't hear a thing). This description is not exact, but you can get the theory from it to understand why you're having a problem.

If you can decode the raw control data (using one of the other available programs) you might be able to discern the new table set(s). Or just hang in there for a week or so, someone will decode the data and post the new tables. I'm betting that is your problem in this case (the table[s] changed).

> Don - can you contact me off list???

I don't promise replacement keys, or even responses to emails asking

for them (see the Win96 registration web page at:

http://www.starrsoft.com/software/win96/register.asp

)

The primary reason for this is that I don't keep records of each

registration for more than a few days, so I have no way of verifying

that any given "replacement key claim" is valid.

> I've been trying to reach Don Starr too for the past month.. sent 3 e-

Do you have a specific question about Win96?

I've not seen any emails from the address from which you sent your

message (to this list). Also, since all WinXX software support is

via email, I (and my wife) normally delete any such messages from the

answering machine without completely listening to them.

-Don

I'm not sure what you mean by "and nothing," but remember that the PL function is basically a FILTER to keep unwanted stuff out, so be sure you really want 123.0 in there. You won't hear *any* radio that's transmitting another tone or transmitting no tone.

I don't see 154.13 listed for New Haven (CT, I assume?) in either the FCC or RadioReference database, so be sure you have the right frequency, of course!

I tried to make it easy for those who lost their key this morning to get back running, I posted a link to Don's site. The link below is a location where you can get a temporary key until yours is sent to you. Its 180 days! You guys musta missed this on Don's site. All I am going to say is write it down somewhere, back it up 100 times, tatoo it on your ankle, whatever. Don's not a babysitter for responsible adults and shouldn't be expected to hold your hand. This happens dozens of times per year AFTER he's told you to make a backup of your numbers. Also make sure you don't have a spam blocker on your end that prevented Don from emailing you back. AOL is well known for this. Some of you are pointing fingers at a person when the problem is on your end.

http://www.starrsoft.com/software/tempkey.html

End of my gripe.

I must chime in on this as well. I have been attempting to communicate with Don also. I have tried for over three months to get my code "reissued". I have sent several e-mails and have never once received any response. I can assure you that I have never been anything but polite and I do understand that it is my fault that I failed to retain my hard copy of my code, but couldn't I at least get a response that he is not going to be able to help me. I love my Pro-96 and I love his Win-96 application but now I am to wonder how to proceed. I am an armature by every sense of the word and I depend on this program in conjunction with Radio Reference to program my scanner. Now I am afraid to even repurchase a license because I do not know if it will be replied to or not. I do not know any other means of help on this. I do understand that he does this on his own time and has a full time family and a job; I still feel that some kind of response is not asking too much.

Subject: RE: [PRO-96] FW: Lost Registration, have proof of purchase

I must chime in on this as well. I have been attempting to communicate with Don also. I have tried for over three months to get my code "reissued". I have sent several e-mails and have never once received any response. I can assure you that I have never been anything but polite and I do understand that it is my fault that I failed to retain my hard copy of my code, but couldn't I at least get a response that he is not going to be able to help me. I love my Pro-96 and I love his Win-96 application but now I am to wonder how to proceed. I am an armature by every sense of the word and I depend on this program in conjunction with Radio Reference to program my scanner. Now I am afraid to even repurchase a license because I do not know if it will be replied to or not. I do not know any other means of help on this. I do understand that he does this on his own time and has a full time family and a job; I still feel that some kind of response is not asking too much.

Importance: High

Don, has a full time Job, and a full time Family, the WIN-xxx software is done n his spare time.

When you purchased the software, the buyer is informed to write, print out, store in a safe space, the reg key.

Hw does not keep copies of them, and he is not requred by law to issue you a new one, when you lost your original.

man up and just purchace a new key, it is automated. pay, and a new key will be created and emailed to you.

This time follow the instructions and store this info with all of your other important papers. Most people use a safe.

Peter
List Owner

Looks like Don is avoiding me after showing proof of purchase, he has not responded with as much as a GTH message. I guess once you pay no matter if you can prove it or not, you get one e-mail for the $30 and after that it is your s#$%.

I see Don responds to the list on other problems, maybe he will address this one?

12431. Win96 lost keys

Yahoo group: PRO-96 (2008 — 2017)
Date: 2008-03-17 22:39:25 UTC
From: Don Starr
Topic: 12407 Message: 12431

I'll put my few cents into this discussion, hopefully addressing most of the "complaints" (or, at least, explaining my side of the issue)...

When you registered, you were issued a Win96 registration key. It was your responsibility to preserve that key in case you had to re-install Win96. Note that this is just like any other software that requires a "key" to install (e.g. Windows itself - you lose the CD jacket/insert with the key, you're SOL). The Win96 registration web page:
http://www.starrsoft.com/software/win96/register.asp
has displayed a "don't lose the key" admonition for a couple of years now.

To me, this seems similar to buying a car, a house, or even a padlock. When you buy one of these things, you receive "keys" that let you use it. If you subsequently "lose" your keys, do you go back to the seller and demand a new set for free? Or do you admit your mistake, pay for a replacement, and vow never to lose your key again?

Some might argue that sending a new Win96 registration key differs from the house/car/padlock analogy above because such a registration key is "free" (i.e. it really doesn't cost me anything to send a stream of bits via email). Those that would make such an argument would be wrong. When I was sending such replacement keys a few years ago, it was taking me, on average, about 20 minutes to read an "I lost my key" email, look up the old registration (if I even had such a record), generate a new key, and send the email. My primary income (my "day job") is based on contract work. For me, "time = money". Time I'm spending sending new keys, without compensation, is time I'm not doing "real work", and therefore costs me money.

I added the "you may not get a prompt response" text to the WinXX registration web pages when the lost key requests started impacting my day job. Prior to that, I was able to spend some time sending such keys without much loss of time/money (and without my wife getting *too* upset, and without my kids asking "where's Daddy").

Over the last couple of years, however, the number of "lost key" emails has, for some reason, increased dramatically. I now get at least 50 of them ***PER WEEK***. The time it would take me to re-issue all of these keys would make all of the WinXX programs a money-losing endeavor. That is:

<requests per day> x <time per request> x <dollars per hour>

has, for a year or so, exceeded

<WinXX registration dollars per day>

To carry the car analogy above to an extreme, it would be as if a Kia dealer sold one car per day, but had 5000 past customers come into his parts department every day, each needing a new set of keys to replace the ones they'd misplaced or otherwise "lost", without any compensation to the dealer. The dealer would be spending more time/money making new keys than he's making on car sales.

There is a very simple solution to the "lost key problem", one that is shown on each of the WinXX registration pages:

DO NOT LOSE THIS KEY

You paid good money for something. Apparently, you thought that "something" was worth that money, or you wouldn't have paid for it. If it was worth that money, you should be preserving or protecting it, or otherwise insuring against its loss. Many technologies are available for such preservation: floppy disks, writable CDs, online "backup" services, perhaps even that newfangled thing called "pen and paper".

While I can sympathize with those who have lost their key (I have, after all, lost my car keys a couple of times and had to pay about $100 for replacements each time, and I've even lost keys for software I've downloaded, requiring a re-purchase if I want to keep running the programs), I really don't believe it's my responsibility to play the role of "key backup service" for all WinXX registrants.

To be blunt... if the key wasn't important enough to you at the time of purchase to get you to make some minimal effort to protect yourself against its loss, why are you now complaining about it?

>I have the original key, it just does not work on a newer version. I
>sent Don an e-mail and he did not reply. So now I know why. I plan on
>just buying it again. Although I paid once already, the recent
>enhancements are worth paying $30 more. I work in the software
>development business and every company I have every worked for charges
>for new versions with enhanced features.

If you have an "original key, it just does not work on a newer version",
it sounds like you have a key issued prior to 01 Mar 2004, when I
removed the registration keys' hardware dependencies. On that date, I
sent an invitation to all registered users, telling them to send me an
email to request a new, non-hardware-dependent key. Most users did
respond to that invitation, and were sent new keys. A very few users
did not respond.

Unfortunately, I no longer have the ability to convert the original,
4+ year-old keys to the new format.

James,

Some very basic questions, please don't feel stupid.

Are you on the right frequency?

Do you have the proper mode (FM or CT *IF* they are transmitting a 'PL' tone, DT for DPL tone, or trunking mode)?

Is the squelch set properly? (just above the noise threshold)

Are you hearing their daily chatter? (If not, check the frequency and mode again if you're sure your programming source is correct.)

Two years old already? Wow, I lost track of the time.

If you're waiting for the ED visits (been there, done that), you only have to wait until they start driving (or school sports). My younger boy totaled two cars before he (surprisingly) turned 20 (he wasn't as talented behind the wheel as he thought he was). Hopefully they'll not do the same as him (must have gotten his hard headedness from his mother), but he's learning.

Then there's the mighty "Bank of Dad" . . . Always open (wallet), they think. ;-)

Right, the 96 wont do tone-outs.

However... If the tone-out is using a different PL/DPL/Talk Group etc than the rest of the transmisions on that frequ/channel, you could set up one channel on the 96 to only open squelch when the tone-out plus PL/DPLetc are xmittted. Then set that channel as a priority. I am not sure if this is commonly done, perhaps someone in the business could answer that.

I think it would be possible for your communications officer to xmit a different PL/DPLetc when toning-out, for people like you who want to use their Pro-96 (or any other suitable receiver) as a"pager". Depending how the system is setup it may/or may not require reprogramming of the pagers. Again, anyone in the busines who could comment?

Jack

Topic: 12374 Message: 12444

Did you mention the frequs on which you are receiving the interference ?

The Pro-96 is very resistant to receiving "image frquency" interference, because like most modern scanners, it has "triple conversion". It IS possible though, as shown in the following example that actually occurred. This explanation is for interference at 381.8 MHz, but the math could be applied to other frequs:

> The freq of 381.8 is only 1 mhz away from the first IF frequ of
> 380.8 on the PRO-96. This may allow this freq to "get thru" the
> first IF stage, making this triple conversion radio, only a
> dual conversion one, and therefore more suseptible to receiving
> images frequencies.
>
> The second IF is at 21.4 mhz, so images would be at 381.8 plus or
> minus twice that IF. The higher total would give a frequ of 424.6
> puting it right in the lower end of the Public Service 400 mhz band.

(The actual trasmitting frequ was tracked to 424.600.)

I could tell my kids were growing when trips to the pediatrician were outnumbered by trips to the orthopedist.

So far so good with driving: The 3 oldest all over 3 years' driving with no injuries. The youngest (20) has expressed NO interest in driving--whose son IS he!?

Don, a little advice from an elder: Quit sending out replacement keys and spend time with your kids; you only get one chance. (I spent a lot of time with mine and I'm not regretting any of it.)

From: Kevin
Topic: 12407 Message: 12446

Well at least I got a response from Don, who like ALL of us has a family and a job! Just know that other software writers have a process once you have PROOF you BOUGHT the software, they give you another key or reissue the old one.

I have installed WinXP and Vista more times in the last two years due to bad HD's and EVERY time I was given a NEW key to install once I called tech support. Once I proved the HD was dead and no other MAC address was using that old code, I was given a new one.

All the other times I reinstalled, I had the e-mail from Don to install the key. The last time I lost ALL data and had to start from scratch. My fault? Depends who you ask.

All I can say is I looked at the web site and it does state "MAY" get a key. I NEVER received anything.

If Don has that many people with registration problems, maybe he ought to change his customer service policy and have a reduced replacement fee like the temp key page. At least that is a LITTLE better customer service than ignoring.

I am just finishing rebuilding a computer (apparently some malware that none of my protection could catch or recover from), and I needed the key to reinstall Win96. Guess what: I had actually read where it said, "save this key", and had done so, and I was thus able to do this without complaining that Don screwed me.

I guess I just grew up too soon; in "my day", we were taught to take responsibility for our own actions.

A story comes to mind about losing keys. I read a year or two ago about a school principal who lost her keys. She paid without complaint $10K (!!!) that it cost the district to completely re-key her school.

By the way, my kids have excellent reputations at work because they actually do their jobs--that is, take responsibility. I drilled that into them because I knew they wouldn't get it anywhere else.

Okay, I'll stop preaching now.

According to that link, the temporary key expired on November 01, 2007.

Hi,
Another good way to check is to press "TUNE" and punch in the frequency
and "ENTER". Then, press "MODE" until you see "CT" in the display.
Then wait for a transmission on your channel. It will show you the PL
frequency when you hear the station of interest.

So you are saying give this Don Guy a pass because he will not do the right thing and send this man a new key? Hey why not, he made his bucks on him why should he? He has our money and unfortunately this is not the first time this has happened. How long would any retailer stay in business with this policy?
As far as saying he is busy with a full time job & family aren't we all.
I see a lot of folks on here helping new-bees with the same redundant questions, they could also say "I responded to that" Isn't this a forum where we all help each other???
Go now Flame on !!!!
Tom

No, you give Don a pass since it was not his responsibility to keep the key the guy was sent - it was the GUY'S responsibility.

The guy received the key he paid for. What he wants is another one for free because he lost the one he paid for.

I lost a DVD I liked. I don't know where it is. Should the manufacturer send me a new one for free?

How long will he stay in business? A lot longer than if he had to supply new keys to everyone every week. You have to remember this is the industry standard, not the exception. How long will someone stay in business following industry standards? About as long as any other business in the industry if that is the only factor.

I have read this thread and kept quiet because I thought everything was already said that could be said. I was wrong.

Tom! Since you think that Don has nothing better to do than re-issue software keys to everyone, even though they were warned to keep a copy, I suggest the following. In your spare time learn to program, then spend several hundred hours writing, debugging, and testing a program. Now charge a modest amount for it and then spend even more time babysitting everyone.

I lost one of my keys years ago and that was back when Don was holding our hands. (THANK YOU DON, and thank you for creating these programs)

I lost my "C" drive once and spent several weeks locating and re-installing my software. Since then I have established a system of backup. 1st, I put my passwords & registration keys into a spreadsheet and PRINT it out. I put one copy in my safe. 2nd, I save all emails that pertain to software purchases. 3rd, I have 2 500gb external drives and every Sunday I make a "Ghost" image of my "C" drive. I also make a "copy" of my data, (including my emails and downloaded files), both on the "C" & "D" drives, to the external drives. I have data backups that date back over a year and "Ghost" images for 6 months. If either of my internal drives crashes, I can recover at least 90%. This system makes it hard to "lose" a key.

I, too, lost my hard drive. Was able to load up everything except Win96. Luckily for me I had saved a copy of the email he had sent me to my off site e-mail (read Yahoo e-mail). Since that day, I mad sure I have ALL my keys, passwords, etc., saved to alternate sources.

On a side note, there are programs that are out there that can actually go into the program that will read your key, serial, etc., number!

I too lost my hard drive, and now do regular backups similar to, but not quite as elaborate as yours, Ron.

However, for important data, like my Win96 key, I also use a quicker, easier, and cheaper (as in FREE) solution. I printed out and filed with my other papers Don's email with the key, and I also WROTE IT DOWN both on the cover of my Pro-96 manual and on an inside page.

It's really a no-brainer. The sad part, and the guarantee that these threads will continue to come up, is that everybody here today now knows about the problem, but future purchasers will probably ignore Don's clearly-written disclaimer, and all of these emails of ours.

I don't tell people how to run their business, but if I was as inundated with this nonsense as Don is, I'd be tempted to put the warning in huge bold print on the download page, and in his email that contains the key, words to the effect, "THIS IS THE ONLY COPY OF THE KEY YOU WILL RECEIVE. PRINT IT OUT AND KEEP IT IN SEVERAL SAFE PLACES BOTH ON AND OFF YOUR COMPUTER. IF YOU LOSE THE KEY YOU WILL HAVE TO BUY A NEW ONE."

12459. Need Pro-96 file for the Denver Metro Area

Yahoo group: PRO-96 (2008 — 2017)
Date: 2008-03-18 13:53:13 UTC
From: jess gypin
Topic: 12459 Message: 12459

Hi all.
Just re-acquired a new Pro-96 and I have lost the files that I had for the other one I had before. I would really appreciate it if someone has a sorted out file for the Pro-96 for the Denver metro area. All I have been able to find is either a standard trunked system file or another file for the state wide digital system. I need to find a file with both combined as there is not enough digital or trunked systems here to warrant having a complete scanner dedicated to either use. And isn't that the point of the 96? Being able to scan all systems at the same time?

Man I cant believe you made this statement.

""For some reason it sounds like Don has a problem with people losing keys and perhaps he might look at refining the way he does them, perhaps that would help"".

Don DOES NOT have the problem with people losing keys. That is THEIR problem and he doesent have to do a thing to rememdy a problem that exist ONLY when people DONT follow instructions. I cant believe, that after Don made his response to the lost key problem, that people are still not getting the point, that it is your RESPONSIBILITY to store your key in a safe place.

Normally, I wouldn't comment, but here it is..

It is the customers job to print the key and keep it. I store all that stuff in the computer and hard copy in a file. However, when I read Mr. Starr's comment last night, I thought it was very "UNPROFESSIONAL" after all the man is a business man. There are many better ways to handle complaints. I have lost a key from BUTEL and he was kind enough to forward when I did misplace.

For some reason it sounds like Don has a problem with people losing keys and perhaps he might look at refining the way he does them, perhaps that would help.

12461. RE: [PRO-96] Re: Interfeareance Troubles/ Image frequs

Yahoo group: PRO-96 (2008 — 2017)
Date: 2008-03-18 17:48:13 UTC
From: jackandrisin@sbcglobal.net
Topic: 12374 Message: 12461

The first part of your message got cut off, but It sounds as if you are receiving two frequs at once,which is typical of intermod.

If you could ID the following frequs it would help:
On which frequ/band are you receiving the interference ?
Can you ID the frequs/TV channel of the two xmitters by searching with a scanner? For example, start at 21.4 MHz above and below the interfered frequ. It is best to do this with another receiver so you can hear the same sound out of both receivers. (Do you even hear the same interference on a different model scanner? Also, try a scanner with different I.F. frequs)

If this begins happening only at 6 pm, and you or your neighbors get home from work at that time, it could possibly be a weak, but very close signal, likely in your own home or a nearby neighbor (or in your vehicles-see below). Try shutting off you house circuit breakers one at a time and see if the interference disappears. Maybe even ask your neighbors to do the same. Move your scanner around the house, around the neighborhood, and see if it goes away, or becomes stronger. Drive around your home in a spiraling path (as the street grid allows of course) out to a mile from your home and see if the interferrence still exists.

I once had an interference which slowly swept thru the lo vhf band on my scanners. I heard it at my house, and I heard it when I drove around. Problem was, nobody else heard it.(Twilight Zone Theme plays in background). I finally traced it to the remote start receiver in my car. Had my wife and I not switched cars one day,I might still be looking for it.

Known sources of interference like this are RF amplifiers, including TV booster amplifiers, especially those bullet types that mount on the outdoor antenna. Also, it is possible that this could be a cable TV leak at a nearby pole, or a sattelite TV amp leak. There is an FM cable frequ that you can use to locate cable leaks with a standard FM radio. I dont know it off hand but maybe a another group member does.

Again, good luck,

Jack W8JAK

Okay, as I count the comments (counting each commenter, not each message, and excluding Don's):
Those who think Don should re-issue keys: 5 (counting those 4 who themselves want a new key).
Those who think the buyer should be responsible: 11.

Seems like there are still some who think every vendor should be like, say, Target, where you can return anything, no questions asked, within 90 days.

In the real world, though:

You lose your keys, you BUY replacements.
You lose that favorite DVD, you BUY another.
You loan out an autographed book and don't get it back, it's gone.
You drop your scanner in the river, it's gone.
(I've done these last two! The scanner was a brand-new Bearcat 6-channel/3-band that got bumped off my belt [I was afraid of leaving it in the car where it might be stolen!], and I went without a portable for over 10 years until I could afford another.)
Your harddrive crashes and you haven't backed up, your data's gone.
You leave your house unlocked and you're burglarized, your stuff is gone; you forgot to pay your insurance (or the payment was lost in the mail), you have NO insurance.
You didn't see that Stop sign, you pay the fine or take traffic school.
You didn't know it was against the law, "guilty as charged".

PUH-leeze! You've lost your key? I'm not touched (sympathetic, but not touched). It was on your drive that crashed? Nope, still not touched; where were your backups?

As far as computer security, I:
Partition my drives so only OS and apps are on C:, which protects my data.
Keep all data on a network server.
On that server, have a RAID, and also clone to a third drive weekly and keep that drive in a fireproof safe not in my house.

As I'm writing this, I'm also cloning C: drives on all my other computers so as to protect me from rebuilding (as I've had to do on a laptop this past week--lost no data or apps, but it's still a royal pain). When I've accomplished this, I'll have at least two copies of every file, everywhere.

On all my software which requires keys, I keep the key written on the CD case--better yet, on the CD. For downloaded software, I keep the email with the key, a separate file (both backed up, of course), and maybe a paper copy. (Tattoos get to be too much what with new versions

and so many apps.)

For the record, I last lost computer data in 1989 (typed DEL *.PTA instead of DIR *.PTA), although even then I was able to recover most of it from backups.

I keep and file necessary (and a lot of unnecessary, I admit) papers, including all receipts, which I reconcile with bank statements and credit card bills.

Where I don't keep paper, I make at least 2 copies on the computer for OFFLINE storage (e.g. CDs), and keep those copies in different buildings.

With my last scanner (Pro-23), I kept a list of the frequencies I'd programmed, so if it got wiped out I could reset it.

For me, this thread has gone far beyond whether Don should reissue keys. Everyday, I'm seeing examples of how what Person A does wrong somehow gets to be Person B's responsibility. That's the main reason why:

Those of us with an earned income are supporting those on welfare.
Our insurance rates are going higher (and will go even higher if we have to also pay for the uninsured).
Our medical costs are up to cover the costs of malpractice suits.
We pay more for pretty much everything to compensate for shoplifting, fraudulent returns, etc.
We pay for and then struggle to remove the protective packaging (which protects us from rifled/damaged/contaminated product and/or protects the retailer from theft).
We pay more for email service and still spend time overcoming the spammers' choke-hold.

Whew, off-topic rant or what!

To somewhat echo RadioLady: If I were in Don's position, I'd consider requiring the user to acknowledge and accept an End-User Licensing Agreement (EULA) which includes a phrase somewhat like, "By downloading this software user understands and agrees that this product will cease to function after thirty (30) days unless a key is purchased and that upon purchase of a product key it shall become the sole responsibility of the user to retain possession of the key and Starrsoft will not under any circumstances provide another key." (An "agree" check would need to appear before download page would open.)

Oh, but wait! This will push Don into hiring a lawyer to write an ironclad EULA, and he'll have to charge more for the software, etc., etc. And then I'll have to append to my above list of things we pay more for because some people won't take responsibility for their own actions.

It might be close to 90% of scanner owners don't read the manual for their scanner, so following the instructions on downloading Win96 is a pretty useless suggestion. Don might do a big and mighty corporation thing and have a accept or decline the download with the keep the key or lose it warning.

Let's talk about the PRO-96.

12471. Lost Key

Yahoo group: PRO-96 (2008 — 2017)
Date: 2008-03-18 21:42:08 UTC
From: Robby Simmons
Topic: 12471 Message: 12471

I had no idea that I was going to stir up so much hostility by simply asking to get my lost key replaced. Yep you are all 100% correct; it is in no way anybody's fault but mine. The facts be known I did print it out and I apparently lost that too. My unlucky day! Ho Hum. If I have to buy another license again yes I will probably do that too because I do enjoy my scanner and I very much appreciate the Win96 program. The fact that you all seem to be overlooking is the ole adage Shit Happens! I posed a simple question and all I really expected in return was a simple answer, "yes I can help you" or "Nope Sorry sucker your on your own" I got neither. So with all of this being thrown back and fourth looking to place blame, calling people idiots or not following directions yadda yadda yadda.... It completely missed the point. All I ever really expected was to be replied to. If you all want to banish me from the group and flame me for asking well go ahead I suppose I have it coming but truth be told I was just attempting to get back what I lost using the only methods available to me. I work with people every day and yep I get asked a dumb question every day too and you know what I answer it to the best of my ability every time. And you know what I'm ok with that. I was under the impression that we were all doing this because it was an enjoyable hobby and there was camaraderie amongst us. Good day to you all. And yes thanks Don for your efforts.

To answer my own question... the FM-cable frequs are 91.25, 97.25, 103.25.
Sometimes CATV operators use these for background music.
Here is a link for CATV frequs:
http://www.n2nov.net/TVFreqs.html

Subject: RE: [PRO-96] Re: Interfeareance Troubles/ Image frequs

The first part of your message got cut off, but It sounds as if you are receiving two frequs at once,which is typical of intermod.

If you could ID the following frequs it would help:
On which frequ/band are you receiving the interference ?
Can you ID the frequs/TV channel of the two xmitters by searching with a scanner? For example, start at 21.4 MHz above and below the interfered frequ. It is best to do this with another receiver so you can hear the same sound out of both receivers. (Do you even hear the same interference on a different model scanner? Also, try a scanner with different I.F. frequs)

If this begins happening only at 6 pm, and you or your neighbors get home from work at that time, it could possibly be a weak, but very close signal, likely in your own home or a nearby neighbor (or in your vehicles-see below). Try shutting off you house circuit breakers one at a time and see if the interference disappears. Maybe even ask your neighbors to do the same. Move your scanner around the house, around the neighborhood, and see if it goes away, or becomes stronger. Drive around your home in a spiraling path (as the street grid allows of course) out to a mile from your home and see if the interferrence still exists.

I once had an interference which slowly swept thru the lo vhf band on my scanners. I heard it at my house, and I heard it when I drove around. Problem was, nobody else heard it.(Twilight Zone Theme plays in background). I finally traced it to the remote start receiver in my car. Had my wife and I not switched cars one day,I might still be looking for it.

Known sources of interference like this are RF amplifiers, including TV booster amplifiers, especially those bullet types that mount on the outdoor antenna. Also, it is possible that this could be a cable TV leak at a nearby pole, or a sattelite TV amp leak. There is an FM cable frequ that you can use to locate cable leaks with a standard FM radio. I dont know it off hand

but maybe a another group member does.

Again, good luck,

Jack W8JAK

Here's a suggestion for everyone. It's a good extra safeguard against losing the software key. One of the many features that distinguish Don's software (Win92, Win96, possibly others) is the ability to change the scanner's Welcome Message. Why not use a couple of the lines of the welcome message as an additional storage place for your software key? Hard drives fail, CD's get lost, but not many folks lose their Pro96.

Robby,
DO NOT LEAVE THE GROUP!! The only "dumb" questions are the one's not asked. New people are joining the groups all of the time. It has to be expected that as new people come aboard, the same questions are going to get asked over and over again. But isn't that what the group is here for? I know that's why I'm here...to help people and to get help when needed. Whether you are new to scanning or an old Pro, whenever you encounter a problem that you never encountered before, it's gonna be new to you...so you should ask all of the questions you want to!!

Robby, there are always going to be a few rotten apples...don't let them spoil the fun of the hobby for you. Just ignore the crap and enjoy the fun!!

Take care and I hope to see you around the boards!!
Mark

12480. Wash, DC PD trunked system w- 2 base freqs

Yahoo group: PRO-96 (2008 — 2017)
Date: 2008-03-19 21:02:03 UTC
From: gwgvfdpio
Topic: 12480 Message: 12480

The Wshington, DC PD operates on a 450 mHz Motorola Type II "Smart-Zone" APCO-25 system. In the past the Radio Reference database listed one "base" frequency for MPDC, with 12.5 spacing and a 380 offset. In updating my Pro-96, (for the first time in a long time), I see that RR now lists two base frequencies, 453.450 and 460.025, both with 12.5 spacing but with different offsets.

I've been told that I need to enter both of these frequencies, with their associated spacing and offsets. However, I can't see any method of entering more than one freq/spacing/offset group, either by direct entry or using Win96.

What am I missing?

Thanks,

Ed

In Win96, you'd select the "Multi table" item under "MOT 3600 CC" on
the Channels tab, then click the "Extended Tables" button, entering
your settings in the dialog box that appears.

I appreciate it Mark and Ron! Don't worry I'm not getting my cage rattled that easy. I do enjoy listening to my scanner. I'm no radio buff at all. As a matter of fact, most of the time the post here are way over my head. But know that I am learning little by little day by day. I enjoy listening to the local happenings of the PD, FPD, and the Air Evac here in the St. Charles, Mo area. I just think it's real interesting. I've even gotten a few of my friends in to it a bit. I never listen in my car, chase storms, or ambulances as far as that goes but sitting in my easy chair listening to my scanner while I surf the net or watch a Cop's rerun is very relaxing to me. I even had the opportunity once to hear the Fire department dispatch to my neighbors house because it had been struck by lightening. I ran over with a fire extinguisher and had it out before the FD arrived. Whoo Hoo! No not a superhero it was only her low voltage transformer for her decorative yard lights. But I did get it out before it had time to spread and cause considerably more damage. No I'm not running to every call I hear to get in the FD or PD way but hey the neighbor lady is a nice gal so I helped out. So no worries they can insult me, degrade me, speak to me with their condescending insults but when the day is over I will still enjoy my trusty Pro-96 using my Win-96 to program it. Thanks for having such an informative resource for newbie idiots like me to learn from.

Robby,
DO NOT LEAVE THE GROUP!! The only "dumb" questions are the one's not asked. New people are joining the groups all of the time. It has to be expected that as new people come aboard, the same questions are going to get asked over and over again. But isn't that what the group is here for? I know that's why I'm here...to help people and to get help when needed. Whether you are new to scanning or an old Pro, whenever you encounter a problem that you never encountered before, it's gonna be new to you...so you should ask all of the questions you want to!!

Robby, there are always going to be a few rotten apples...don't let them
spoil the fun of the hobby for you. Just ignore the crap and enjoy the fun!!

Take care and I hope to see you around the boards!!
Mark

Hi All..Talking about backing up your software I use either a CD or a DVD to do that but I also use Carbonite from http://carbonite.com/ and just backed up my complete computer. What will happen if your house burns down? All your software is gone for good, unless you store it offsite as suggested before, but I have to much invested to lose it all, so I back all of it up OFFSITE also..How do you do it? Wish I could do that with my PRO-96..Cheers..Keithmj

Yea I will probably do that the next time I buy a scanner. I do have an older BC 200xlt and its a great radio but no trunking capabilities. The Uniden radios do seem to be a step above the rest at least by weight and feel? I bought this 96 pro on a whim, I should have researched it a little better before I put down the cash. Don't get me wrong I've never had any problems at all with it and it has been easy to use so I'm not complaining at all. I would probably just do it different if I had to do it all over again. Thanks for the advice!

Actually, there is a way--a pretty easy and straight-forward way--to backup our Pro-96s: Using Win96, do Scanner>Download from scanner, save the file (repeat for each V-Scanner, loading each in turn into main memory, downloading to a file). You can save a copy of the file to a floppy if you wish, or a USB stick, or a CD, to keep offsite.

No Problem.Hope it helps someone to keep from having problems...I got the idea from listening to the Rush Limbaugh radio show and I tried it and it works. If you add anything it will automatically adds it to the backup. I also tried LifeLock for idenity theft and use that also..About two years ago my computer disc quit working and had to install a new hard drive and I couldn't find my key for the PRO-96 software and I thought I might be stuck with buying a new key, which we shouldn't have to and I couldn't use it for about 2 months and then when going thru some old scratch papers I found the key that I written down. Now it is all backed up on CD and an external hard drive and then I heard about Carbonite and backup to that also..It is worth the money if you can spare it..Cheers..Keithmj

12492. Illinois Starcom 21 problem

Yahoo group: PRO-96 (2008 — 2017)
Date: 2008-03-22 03:17:34 UTC
From: chicago132000
Topic: 12492 Message: 12492

I've been trying to monitor Illinois' Starcom 21 channels. (This is their new statewide system that the State Police is now using). I can't get any good reception. I live in Chicago and have tried tower sites and the reception is awful on all of them. Transmission is garbled almost all of the time. I know they're using CQPSK modulation, but I have DSP 1.4 which is supposed to support that. I do have the oldest CPU version 1.1 though. None of the talkgroups that I programmed are encrypted.

Any thoughts?

From: John P.
Topic: 12492 Message: 12496

Please keep hammering Radio Shack (call -and- write them a letter) to issue a new Firmware update for this CQPSK on the PRO-96, as Lucas County Ohio is the same way - tried 3 different antennae, with and without ATT and still horrible, unusable reception despite having a dozen tower sites.

Chicago wrote: "...Transmission is garbled almost all of the time. I know they're using CQPSK modulation, but I have DSP 1.4 which is supposed to support that..."

Yahoo group: PRO-96 (2008 — 2017)
Date: 2008-03-23 08:36:18 UTC
From: Rich Carlson
Topic: 12492 Message: 12497

This is an issue for all digital scanners, including the Uniden and GRE's,
The issue is non-simultaneous reception of multiple simulcast towers,
essentially a type of multipath distortion.
If you venture out of the Chicago area into locales covered by single tower
sites you should notice the system sounding much better. (Check the CARMA
Profile for those sites)

Some success has been had by reducing the antenna resources so that you are
only receiving a single site instead of multiple sites.

Channel lo is the offset. Channel hi is one less than the offset of
the next freq up in the table.

12503. Re: FW: Lost Registration, have proof of purchase

Yahoo group: PRO-96 (2008 — 2017)
Date: 2008-03-27 17:39:35 UTC
From: Randy Evans
Topic: 12407 Message: 12503

When I received my key I simply sent an email to myself using one of the free email accounts available (Hotmail, Gmail, yahoo, etc.). Just send an email to one of those type email accounts with a Word attachment containing your key.

I created a folder on Gmail and labeled it "Win96 Key" and saved it to that location, which of course is actually located on their server rather than your own PC. That way you have the information backed up offsite and can simply retrieve it anytime it's needed by logging on to the free email account of your choice and pulling up the needed info. That's the quick and easy way of storing small amounts of data to an offsite location.

I saved my key using both Gmail and Yahoo email systems (just in case somethings crazy happens to one of them - you never know). I REALLY don't want to have to ever buy another key again!

Anyway, that's the best way I've found of keeping the info handy while still saving it to an offsite location.

Randy

NUF SAID !!!!!!!!!!!!!!!!!!

When you register, you will be issued a unique key that will allow Win96 to run past its 30-day trial period. DO NOT LOSE THIS KEY. You will need it any time you wish to install Win96 (new computer, new operating system, computer crash, etc.). In many cases, we can re-issue a registration key upon emailed request, but this is not guaranteed and may not get you a prompt response.

I have saved the email with my key in 2 different email accounts. If 1 company had a problem it was in another. Also, I printed it out and have it in the filing cabinet. I bought the key to the program so it is MY responsibility to have access to the key. I don't think that the software developer/salesman has the time to keep reissuing keys to those irresponsible people that lost their key. I would rather Don Starr have the time to upgrade and develop new programs for us scanner enthusiast to enjoy.

Just my thoughts.

For those that replied to my request with helpful information like Don, I appreciate your replies. To those that answered with either incorrect information or catty replies, neither were necessary. I found my key within a few minutes of sending the original email and as regularly occurs Yahoo Groups put my follow up "I found it" email in the queue and did not send it for several hours. Replies just stating "NO" were incorrect and unresearched. I had made a copy of my registration information, however with both advancing age and reams of saved paperwork I was not able to find the information for a while until the light bulb went on and I remembered where I had filed it. Also, I had not been back to Don's site, so until I read about the upgrade that allows you to view your registration information I didn't know about it. I have been on groups since Yahoo started groups and was on BBS's before that and if there is one thing I have learned is that both truthful and technically correct replies go a lot further than replies with either incorrect information or replies with an "attitude". Don, thanks for a great program and keep up the good work!

Subject: RE: [PRO-96] LOST KEY

We are NOT going to start this topic up again. It has been started every
other week for 3 months.

If you followed the instructions listed in the email and on the starrsoft
website.

When you registered, you were issued a Win96 registration key. It
was your responsibility to preserve that key in case you had to
re-install Win96. Note that this is just like any other software
that requires a "key" to install (e.g. Windows itself - you lose
the CD jacket/insert with the key, you're SOL). The Win96
registration web page:
http://www.starrsof <http://www.starrsoft.com/software/win96/register.asp>
t.com/software/win96/register.asp
has displayed a "don't lose the key" admonition for a couple of
years now.

If you did not follow these basic and comon sence rules, then man up and buy
a new one. Don Star is not responsible to / nor is he required to waste his
day away replacing all of the lost keys, that has become so comonplace
nowadays.

This topic is CLOSED! We have hashed this out 3 times in 45 days.

Peter
List Owner

From: John Hyde
Topic: 12536 Message: 12536

Hi all: I know I have asked this before but I'm 1800 miles from home and on a friends computer so I can't look back in my outlook express to see.
How does one go about setting the '96 to go off if a severe wx alert is received?
I think it's something like wx band-func-pri-scan-pri again to get it in to priority?
I just require the steps to set the wx channel in this area as priority.
Thanks all.

Topic: 12536 Message: 12537

I think what you want is in here somewhere; since you're off in the boonies, I'm sending you everything.

Pro-96 manual, pp. 64-66

SAME Standby Mode
The National Weather Service precedes each weather alert with a digitally encoded SAME ... signal, then a 1050 Hz tone. The SAME signal includes a FIPS ... area code, and an event code that corresponds with the type of alert being sent. You can configure your scanner to operate in SAME Standby mode, where it monitors a selected weather radio station for SAME alerts for areas you specify. You can program your scanner with up to 10 FIPS codes for the areas you desire. The National Weather Service maintains a current list of FIPS codes at http://www.nws.noaa.gov/nwr/.

To configure your scanner for the SAME Standby mode, follow these steps:

1. Press WX until you identify the weather station with the strongest signal for your location.

2. Press FUNC, and then PROG to access the FIPS code entry table.

3. Use the <up> or <down> keys to select the desired FIPS code storage location.

4. Use the numeric keys to enter the desired FIPS code, and then press ENTER to store the code. Press TEXT to label the code entry with an alphanumeric text table if desired. Repeat this process for all the FIPS codes that you wish to store.

5. Press L/OUT to lock out or enable specific FIPS entries.

6. Press WX to exit the FIPS code entry table.

7. Press FUNC, and then WX to initiate SAME standby. The scanner will monitor the selected weather radio station for alerts with FIPS codes that match the codes you entered in the FIPS entry table. To exit SAME standby, press FUNC, and then WX.

Hope that gets it for you.

From: xpawel16x
Topic: 12507 Message: 12539

I am also new to the Pro-96 and I asked the same exact question on RadioReference... Seems like during scanning the bottom line is always BLANK...what a waste of space, I thought it would show the text tag of the bank that is being scanned like on my Pro-97 but no, the Pro-96's bottom line is always blank when scanning. :(

From: mcginleyjoseph2000
Topic: 12542 Message: 12542

When programming extended tables for UHF trunked systems, I have noticed Radio Reference does not always indicate the proper hi-lo programming when using exyended tables.
Is there a standard formula used to calculate these ranges, ie. Morris County NJ?

For Mot 3600 systems like Morris County, NJ, you can usually do
this:
1. sort the entries by "offset" value
2. For the last entry (the one with the highest offset):
CH Lo = offset
CH Hi = 759
3. For all entries but the last:
CH Lo = offset
CH Hi = _next_ entry's offset minus 1

So, for Morris County, NJ, you'd end up with:

CH Lo CH Hi Base Freq Offset Step
380 519 471.000000 380 12.500
520 759 476.000000 520 12.500

Got this off the Pro-92 Yahoo Group.

Just what I have been looking for!!

Here's a trick I learned from Scanning USA magazine - author steve Donnell and it is a handy "Bolt on Mod".

http://www.cardowireless.com/US/BTAII
<http://www.cardowireless.com/US/BTAII>

http://www.cellularaccessory.com/uniscalabta.html

Attach a CARDO BTAII bluetooth adapter to your scanner. You may have to use a submini(3/32 2.5m) jack to Mini(1/8 3.5mm)plug stereo adapter or the same to mono depending on your scanner. It works great upto 30ish feet, but most of the time I get as far as 60 feet. You can use most any Bluetooth headset, but I recommend you buy the BTAII adapter and the CARDO scala 500 headset as a pair if you can find them. The BTAII and Scala 500 are "Paired" at the factory it makes it a lot easier. Also if you buy the paired package the charger is a dual charger, you can charge the adapter and headset at the same time. The BTAII submini plug has three contacts similar to a stereo plug, except the tip is the "mike" and the ring is the "speaker" inputs. Look to ebay for the best prices, I have found a few BTAII/scala 500 sets for under $20.00. Dont buy from DarkskyRacing, or Nerak0301. They both sold dirty/used, BTAII's only, as new BTAII/Scala 500 sets, denied responsibility. You can probably do the same with any brand of Bluetooth adapter, but I tried the CARDO BTAII with the SCALA500 headset and it works great and is easy to operate.

12550. Re: Re: [PRO-96] Blue Tooth Transmitter

Yahoo group: PRO-96 (2008 — 2017)
Date: 2008-04-12 15:57:51 UTC
From: BOB PERKINS
Topic: 12545 Message: 12550

I'm using a Motorola cell phone ear piece with the Cardo. With the Cardo plugged into the scanner ear phone jack, it will activate the Cardo transmitter when the scanner starts to receive a signal. The Cardo needs enough audio volume out of the scanner for it to start transmitting, but in my case that isn't a whole lot. In most instances, I run my scanner volume about 1/3 up. So, make sure you have enough scanner volume to put the Cardo in transmit mode when the scanner receives something.

After the scanner quits receiving and there is no audio, the Cardo will continue to transmit to the earpiece for about one minute, and then it turns off if the scanner doesn't start receiving again. It does that to save battery use. Then, when the ear piece doesn't get a signal from the Cardo, it, too, will go into standby mode to save battery.

You shouldn't have to "wake up" the earpiece manually. My Motorola wakes up on it's own, though there may be a half second delay between wake up time and the actually start of the scanner receiving. I don't have to wake the earpiece manually.

It sounds like your earpiece might be in some kind of manual answer mode. The earpieces are designed for cell phone use, so it may be waiting for you to manually answer "the call" before it starts receiving. You may need to look at the earpiece documentation to see how to turn on automatic answer mode.

The Motorola model I'm using is an H500. I tried 5 different brands including top name brands, and the H500 had the best range, so I stayed with it and returned all the others. There were a couple earpieces that would barely work 15 feet away from the Cardo/scanner. However, all of the units I tried would "come on" almost immediately after the Cardo started transmitting.

12556. Attenuator question

Yahoo group: PRO-96 (2008 — 2017)
Date: 2008-04-17 20:41:01 UTC
From: Craig
Topic: 12556 Message: 12556

Should the Function + ATT be the same as just ATT attenuate the same? Here on the Orange County California TRS system some of the cells will be distored when I am in certain places and if I turn on Global ATT it will help some what but if I just press ATT only (with Global ATT off) it clears it right up. I thought either one would have applied the same Attenuation but ATT by itself seems to apply more attenution then Function+ATT for Global. Any thoughts

Craig

Global ATT applies ATT to ALL channels. ATT only applies it to a single channel. The Global setting could be attenuating something that you don't want attenuated...thus, poor reception.

Thanks for the reply. I thought they would apply the same attenuantion but it appears they don't. During the same radio traffic I can try just ATT (clears up the traffic alot)or just Funtion + ATT (clears it up but not nearly as much as ATT only) I get different results making me think ATT applys more attenuation then Function + ATT.

THe two methods use the same attenuation. When you use FUNC+ATT
(global atten), you've only turned on "global attenuation"
mode. That doesn't necessarily mean that global attentuation
is _on_. Pressing ATT would then turn it on.

Date: 2008-04-17 23:37:07 UTC
From: Craig
Topic: 12556 Message: 12560

Thanks Don,
I had read that a few times in the manuel and did not get it until I read your post. I still thought it was 2 seperate deals global and per channel which it is but you still need to activate the Global by doing Function + ATT and then turn it on by again pressing just ATT.
Makes sence why I thought ATT by itself was a stronger Attenuation then Global + ATT(as this by itself does not do anything).
I still thought when I pressed Function + ATT it made some difference (even though I was just activating it not turning it on) I will try and test that part to see if I'm just loosing(lost)my mind.

Again thanks

Craig

12561. Can anyone help me?

I own the Pro-96
my area Anoka County,MN on MN ARMER system
is rebanding next week
Im a geek and really know not more about my Pro-96 other than locking
out TGID's,banks
and downloading with the win96 sofware from THe
radio reference database
my area is standard p-25
I need to lower the frequecies by 15MHz
Right now they are in the 868mhz area
my reqeust?
Could anyone walk me through the steps of manually changing the
frequencies with my pro-96?
I looked in my owners manual and it does not work as i follow the steps
on the page for this.
Thank you in advance for any help on this!

Go to first frequency to change in the bank.
Press PGM, key in the new frequency then ENTER.
Press UP and repeat above for each freq to change.
Don't mess with voice freqs...fact is, zero them out with FUNC + CLR.

If you use Win96 for programming (and if you don't, shame on you) simply check the extended frequencies box on the first page (when the program starts up) and you'll be all set to program from 25 MHz to 1300 MHz (minus the cell zones). However, the sensitivity may not be all that good (see the www.starrsoft.com <http://www.starrsoft.com/> pages for the software and other information).

If you do NOT use Win96, there is no way to allow the new channels.

The Win96 mod is the way to go. I've done this and listend to Blue Angels and T-birds, among others. If you're at the show, no problem with the sensitivity. I've also listened from my home, about 2 mi as the F18A flies and still heard them no problem - all while using the standard ducky antenna.

Good luck,
Marc

I do have Don Starr's software and have clicked the extended frequencies button, but don't have any frequencies in my area that I'm aware of that are extended so that's why I looked through the manual to find my answer, oh well. Thanks for the replies.

I do a File >> Export to CSV, and then open in a spreadsheet like Excel
(or even notepad) for formatting that prints out reasonably clearly.

From: ski4506
Topic: 12573 Message: 12573

hi guys
i live in Minneapolis and am not getting anything on my scanner i
believe they re banded the systems around here.
so a few questions.
first can i reprogram it?
second does anyone have the new file after the re banding for mpls/st
Paul?
im not real technical with this scanner and don't understand a lot
about the programing of it but i was able to program it when i first
got it using win96. also if there is anyone in the Minneapolis area
that would be available to help me let me know i would like to find
out more about the virtual scanner feature.
thanks in advance for any help
ski

From: Paul
Topic: 12573 Message: 12574

Yes, they've rebanded.

All channels, except for one are now 15 MHz less than what they were, so the new controls are: 852.0375 - primary, 852.1375 - alternate, 853.8125 - alternate, and 868.6625 - alternate; note that this last one is the single, non-rebanded channel mentioned above.

Just put in the new controls and you'll be all set. You can use this same approach with the other rebanded systems, including Carver, Bayport, Dakota (Hastings), Cambridge, and any others that might be of interest to you.

From: astrobicyclist
Topic: 12575 Message: 12575

I'm just curious how many people actually do use these. I change them up all the time for road trips and love the V-Scanner feature. I went to my local scanner/shortwave enthusiast group and was surprised to find that nobody used this feature. This is more of a yes/no poll question.

If you haven't used the V-scanners--they're not difficult to load up and use. It's great to not to have to use a computer to load up new configs while on the road.

Thanks,
Scott

If you download Donn Starr's Win 96 in conjunction with Radio Referance.com. You can set up some ultimate scanning banks for your area.

Topic: 12575 Message: 12578

I use them a lot. Being in Los Angeles, there are just too many agencies to have them all arranged efficiently in just one set of ten banks. I keep a couple location/driving-specific V-folders for trips I take regularly, and one that stays empty "just in case."

Very handy. In less than a minute you file/save a complete set of frequencies and load in another. A little bit like the old SBE Optiscan but with 50 times the capacity, and you don't need the deck of cards <g> http://www3.telus.net/ve7aq/Optiscan.html

Also being in the Los Angeles area, I echo Radio Lady's comments. Just listening to
LAPD alone and placing the many specialized groups (and Divs.)in different banks can almost fill one
V-Folders. It's easy to change folders as different scenarios develop amongst the different agencies.

I know this is PRO-96 group but just a word for the Uniden type of dynamic memory.
I use their Quick keys to activate and deactivate groups in much the same way.
I have both Unidens and Pro-xx and both are great in their own way.

Just thinking about the V-folders puts a knot in my stomach! I have a Pro-96 that has gotten very little use because I don't know how to begin using them, even after reading the manual and the Radio Shack helpsite. I wish I could just get off the ground with it. But I find it scary as I don't understand what happens to what's in the working memory and if you can retrieve it later, or whether it gets stored and in the process it deletes something else that is already in there. And I don't know what buttons to push in what sequence to get going. And I'm also afraid of possibly getting something hung up while trying to figure it out.

It's been embarrassing to be about the only one here who doesn't understand V-folders, and I hate to be missing out on all the enjoyment. Any tips about this would be greatly appreciated!

Your not alone. I don't understand them either, I figured out enough to set it on the one for Connecticut but about all I receive is the State Police. It's on my list to figure out how to program it so I can get the local fire and EMS but the learning curve factor is enough of a reason to keep me procrastinating.

For me I have found Win96 by starrsoft is a godsend...it makes
programming a snap..you need a cable to program it with too...GRE
makes a great USB cable..
downside is the software is windows only and not MAC...but I have a
macbook with a windows partition on it too... :-)

I just finally broke-down and bought my Pro-96 last weekend (got an outstanding deal on it!). I haven't had a chance to experiment with V Scanners yet, although one of the other Pro-96 users here uses them all the time.

I have my immediate county's frequencies programmed into the first group of frequencies, and I plan on programming the surrounding counties into V Scanners. This should give me more than enough left over for trips as well.

Buying Win96 + programming cable from Radio Shack is one of the smartest things you can do to maximize the potential of your Pro-96.

Very simple operation.

To get your current Working Folder into a V-Scanner folder:
Press in this order:
1. PGM
2. FUNC
3. PGM
4. 1
5. select a number 0, 1, 2, 3, 4, 5, 6, 7, 8, 9 or (.)
6. ENTER
7. ENTER Please Wait >>>>>>
8. ENTER
9. CLR
10. SCAN

To get a V-Scanner Folder to the Working Folder:
Press in this order:
1. PGM
2. FUNC
3. PGM
4. 2
5. select a number 0, 1, 2, 3, 4, 5, 6, 7, 8, 9 or (.)
6. ENTER
7. ENTER Please Wait<<<<<<
8. ENTER
9. CLR then wait for reboot
10. SCAN

OK guys thanks for the info i still don't really understand what control channels are and how exactly to change them maybe someone could explain it. when i first programmed my scanner i did use win96 and a file i found in the groups but that is as far as i got so i never really went any further into it such as using the v scan feature i really only listen to mpls police and fire witch were in bank 5 on my scanner along with some other agencies like hcmc hennepin county sheriff and some others. i guess one question i have is has any one created a new file with updated frequencies that i could download to win96 and program it like before? other question is if there is anyone in the mpls area i could hook up with to help me understand this thing a lil better. again thanks for the help.

I just visited the FCC equipment authorization page. I had not been there for several years, and found the address had changed. It is now

https://gullfoss2.fcc.gov/oetcf/eas/reports/GenericSearch.cfm

For newer Pro96 owners, this provides some interesting information about your scanner, such as GRE's request for confidentiality, measures taken to assure cellular reception not possible. Admittedly old stuff, but still interesting reading.

I have being using the V-Scanner feature from day one.
It was one of the factors in choosing this scanner.

I have mainly used it for travel, but I create different files
for many areas. If you were to look through the files section
you will find many I have written to cover large areas of travels
across several Interstate highways. This is a fantastic feature of
this scanner that everyone should be using to their full advantage.

V-Scanner is a way to save your work you have in your scanner.

Me I have two sone and they live in to states so I can program my scanner so when I go to there house I can loisted to what is going on at eather sons house. plus I just have to progran once and store it in a folder then bring it up and now I am ready to see that is going on there. right now I have two state 3 city loaded in my and a test folder that I use when I am changing my around because most of my is on marsc and so I can here what is realy going on.

I use the software WIN96 and does all the work. ww8o

From: newnethboy
Topic: 12575 Message: 12596

I've used them some, like the feature very much but haven't moved around enough to have the need. (I think what I like most, besides the ability to change programs, is that each V-Scanner is a complete program, makes the scanner a totally different personality, vs. just different channels. E.g., you could program your scanner with no lights or sounds, but for situations where you want/need to see the buttons you set up a V-Scanner for that.)

I have become totally dependant on Win96 for my programming, and the same thing as V-Scanners can be accomplished by building and storing different files, and loading them as desired. The limitation of this approach is that you can only change programs while at your computer, whereas you can change to a different V-Scanner load anywhere you can carry your Pro-96.

As discussed in this group a while back, to load V-Scanners using Win96, you must:
1. Build the program in Win96,
2. Load the program into the scanner,
3. Using the scanner's front panel, copy the program to a V-Scanner.

You can read the V-Scanners from Win96, but you can't load them directly.

Be sure to remember this trick:

Before loading from a V-Scanner, copy your regular setup to the "scratchpad" (V-Scanner .). This saves whatever you had in the main memory, a good safeguard even if you already had that program in a regular V-Scanner. One too many copies is always better than one too few.

(Do NOT save to scratchpad before loading from the scratchpad. That will wipe out what you saved in the first place.)

I was remembering the thread starting with #12238 on Feb 7 08, but I wasn't remembering your reply, Frank.

Looking in the Win96 (v1.05) Help, search on V-scanner, select Virtual Scanner Interface, and it tells that you can upload to any or all of the V-Scanners from individual files. You need one .P96 file for each V-Scanner you wish to upload to. That means you need to create the program with Win96, save it to a file, and then load it to the V-Scanner.

So the way this looks like it would work out, you create all the programs you want to have available, and save each one to a .P96 file. Then when, say you're going on a trip, you upload the appropriate files into the V-Scanners. Let's say you upload the locations you plan to pass through today. Tonight in the motel, you connect to your laptop and upload the set of locations for tomorrow's travel.

Way cool! That's what this V-Scanner business is all about!

Did I get it right this time, Frank? (Thanks for setting me straight--or at least a little straighter.)

Or better yet, do as Joe suggested earlier. Set V-folders by states
which you travel through and load the next state as you cross the line.

Thanks to you and others, I am happy to report that I am now up and running. I have successfully saved my working memory to the V-scanner scratchpad (thanks for your trick - it came just in time), and I have loaded in and then saved back a few of the V-folders to their original locations. Then I retrieved my original from the scratchpad (folder .), and there it was - Ha!

I just need practice is all, because I am having to read Frank's directions every time I do it, and going slowly and carefully. I appreciate those who recommended WIN-96, but I enjoy programming by hand and have gotten pretty fast at it. Most of my "stuff" I can load in and then won't have to change it very often anyways.

Thanks again!

I can't imagine groaning through programming by front panel, but then
I don't write computer code or build radios either. Each to his own.
If you actually enjoy this, go for it!

Just keep one thing in mind: There are a few things you can do with
Win96 that you can't do with the front panel. (I won't list even one,
but they've been mentioned from time to time here.)

Also, my scenario of having several programs in files and loading 10
at a time while traveling, won't work without Win96, a cable, and a
laptop.

Have fun!

G'day Bruno,

If you only program in the control channels, that's all it can scan.

If the system you want to hear is a p25 system, that is all the programming that is needed (they broadcast enough data for the radios to figure out the rest of the programming).

Rick

I think I interpreted your question differently than Rick or Joe.

If you mean, "can the Pro 96 scan through a range of frequencies, locking onto control channels only" - as the Uniden 396 and 996 can do when searching a custom search range, then the answer is "no."

From: Cyrano Jones
Topic: 12612 Message: 12612

A new trunk system was just implemented in my city, Eugene, OR. The only trunking I've worked with so far is Redding CA. At the Radio Reference site, the trunking type for Redding is listed as "Motorola Type IIi Hybrid". I was able to get this system programmed into Win96, and it works fine.
RR lists the new Eugene type as "Project 25 standard". This isn't one of the choices in Win96. Does anyone know if the Pro96/Win96 can handle this type, and if so, are the any tips, tricks, or pitfals to watch for?
Thanks,
Mike

What version of Windows is on the laptop? (Win500 requires Windows 2000 or later). Is that version of Windows current with all Microsoft updates?

In Win96, look at Help>About; What version do you have?

What actually happens when you attempt to connect to Web Import? How
far do you get?

In Win96 v01.55, if you go to File>Web Import>RadioReference.com, and
choose either Trunked systems or Conventional frequencies, you'll
reach a window where you have to log in to RadioReference.com. Are you
a paid-to-date premium member? If so, enter your username and password
and click Start and you should be in, and you can select the locality
you wish to import.

(Since it worked on your desktop, maybe you had checked the box for
Remember me, and you've forgotten about entering your username and
password.)

How far do you actually get before you're stumped?

I can't replicate what you're reporting. If I leave out the login, I
just get a message that tells me to put it in. Nowhere am I getting a
"file not found" message, so I can't help you any further, I'm afraid.

I've had no problem with Win96, Win92, (or ARC8 or ARC83 scanner software) - or anything else - since installing SP3 about 10 days ago. My 4-year-old computer runs at least as well as it did before, maybe just a tad better (faster).

This is a story of my faithfully following instructions and paying for the software via US Postal Money order.

I have written many times to win96@starrsoft.com and Don@... providing a copy of the receipt from the Post Office.

I am writing this message in the hopes that Mr Starr will see and respond to my most recent email message of the 23rd of May.

The language here;
http://www.starrsoft.com/software/tempkey.html
indicates that Don is behind in addressing paper transactions. A temporary key was provided but has since expired.

It is simply not right to allow individuals to purchase "manually" then not respond at all.

I now have a non-functioning product that I have paid for. The nag screen indicates that if the registration message is displayed in error to contact the author. I have tried and tried to make contact.

I originally sent the Postal Money Order to Don in December of 2006. I have written many times and have never ever received a response.

While I fully agree with the "can't provide replacement keys" I would really love to have been provided a key upon purchase.

If manual transactions were not to be honored then please don't take the money and "run".

So in the hopes that Mr. Starr has an occasion to read these threads I would appreciate a response and key as I really enjoyed the software while I could use it!

Don, Please respond

Did you check your spam filter to see if it got caught there? Yahoo is notorious about filtering messages that are NOT spam. If you're fortunate, it hasn't been deleted yet (if trapped).

The key maker program responds within minutes (and Don has no record of who paid or what key was issued).

At about the middle of 2006, I stopped accepting "postal" registrations for my WinXX programs. The various registration pages on the web site were changed a couple of years ago, removing any "instructions" to send such postal payments, leaving only credit card and PayPal options.

I made this change because:
* people were sending payments (check and money order) to "StartSoft.com", which is not a "legal" entity that can cash a check
* people were sending cash
* I got behind in processing such payments (manual key generation was required)
* people kept sending emails regarding payments for which I had no record

If you've sent a money order that has not been cashed, go get a refund for it. If you sent a check, stop payment on it. I won't be cashing either type of instrument.

I appreciate the reply, finally a reply.... All I needed.
"a couple of years ago" sounds wrong.... If I did not read the instruction on the www page I would not have followed said instructions. Mid-2006 sounds wrong as I sent the payment based on what I read during early December 2006.

Rick, No one here is stupid, I decided to use this forum in an attempt to get a response to my queries regarding the situation. As the subject states this NOT about a lost key.

The reply from Mr. Starr and the previously mentioned "stupid" I lost my key messages can be made "sticky" or saved as a document for others to reference.

Of course I check all spam filters, and I would not use yahoo mail for any more important than completing a form that requires a valid email address.

Now that I have a response I will get a refund from the Post Office and use paypal. All I wanted was a reply to a question. Mr Starr could have scribbled "return to sender" on the envelope and I would have had an answer.

There could have been a one line (or 2) on the www site about the manual payment similar to the language in the reply below and I would have "got it".

Just looking for information.

So, Thanks Rick, a real man. Can you insult strangers at a whim for no logical reason in person? Your brains are made of dung.

What I said in response to another comment OTHER than your note was that "Ignorance can be fixed, but stupid lasts forever." While it was not directed AT you, I can see how your frustration and anger can cloud your view. Ignorance is fixed through education. It's your choice, just as it is to choose your behavior.

If you had searched the archives, your question could have been answered. All key issues have been WELL covered before and are in the archives. That is why the other person made a comment, it was their frustration showing.

While opinions of me may vary, your follow up comment and personal attack was uncalled for and indicates which group you're choosing to join. Again, your choice.

I hope your problem gets resolved. I agree it can be frustrating.

12642. quick fix for audio squeal

Yahoo group: PRO-96 (2008 — 2017)
Date: 2008-05-26 01:09:15 UTC
From: Richard L. Elliston
Topic: 12642 Message: 12642

My Pro96 recently developed a high pitched squeal, ressembling audio feedback, at higher volume levels. The problem is not uncommon, and was discussed here just a couple of years ago. (message #6887) I suspected a poor antenna connection at the bnc was having a microphonic effect. While investigating this possiblility, I grasped the scanner with thumbs over display, fingers interlaced behind the scanner. When I squeezed the scanner, the squeal stopped. Solution to problem was then obvious -- tightened screws slightly. Hope this is helpful to Someone else having the same problem.

12643. Win-96 & Vista Update

Yahoo group: PRO-96 (2008 — 2017)
Date: 2008-05-26 15:21:05 UTC
From: David Shrum
Topic: 12643 Message: 12643

Well I just in the last couple of days allowed M$ Windoze to do an optional update; Well last night when I tried to start IE it refused to start, it clams it's because of Data Execution Prevention (DEP) which isn't so bad because I use Firefox for just about all of my web browsing.

You ask what does this have to do with the Pro96, it's this, this morning I went to start the Win-96 program and it wouldn't start either responding similarly just without the "Data Execution Prevention (DEP)" message. I'm going to see if I can 'work around' this but in the mean time, I would suggest using caution with the MS optional updates.

In case someone is going to do a system restore to a date before the last update, I did and no joy; Also unzipped a new copy of Win-96 and let it over write the old copy, no joy there as well.

Something obviously burped during the last Windows update. If you check your (MS site) update history, you *might* be able to uninstall it and try again. The only other options are to use a recent system backup (you have backed up, no?) or start all over again with a complete system rebuild using the stock distribution disks (been there, done that).

If you can't get MSIE to run properly, you won't be able to do any more (new) updates, ever (required by MS for that function) and indicates a more serious problem. MSIE is Explorer and is used for many of the Windows functions. It's an integral part of the OS. Win96 is likely not the problem here, but the Explorer program itself (and you'll have errors in many odd places). In short, the OS is broken, not your additional software like Win96.

My condolences, I've been through similar (I use system AND file backup programs because it would take me 40-50 hours to rebuild my configurations). And no, I don't run Vista (no need, and most of my printers, page and film scanners and such wouldn't work). If I didn't have to run Windows (Photoshop isn't available in linux) I wouldn't. MS 'fixes' over the last three years have taken my boot time (power on to being usable) from 30 seconds to 4 minutes. Other software is more sluggish as well (not a virus or worm, I'm protected from those).

Good luck,

Rick WA6NHC

There are two large issues with SP3. It can render .exe files useless and will not open them, and it will create false positives for anti-virus, anti-spyware, and anti-malware programs. It is not ready for download yet. The good news is, you can go into control panel, click the "Show updates" check box, scroll down to SP3, and click remove...Bye-Bye!!

SP3 update ?
I wasn't aware that Windows Vista had already prgressed to SP3.
I thought SP1 was just recently released.

12650. Entering talkgroup IDs in Win96

Yahoo group: PRO-96 (2008 — 2017)
Date: 2008-05-27 16:11:33 UTC
From: Cyrano Jones
Topic: 12650 Message: 12650

Hi all,
I was trying to enter talkgroup IDs for Redding Ca public safety trunked, as found at RR, and had a strange result.
They are all 5 digit decimal. Some of them entered fine, like 33280 or 34816, other were immediately translated by the program to a strange format. E.g., 53384, 58704 and several others were all changed to 600-09. I could see it translating them to a different format, it almost seems like some information is lost when it translates them all to the exact same number ;^)
Any idea why this happens, and how these IDs can be entered? These are all straight from radioreference.com.
Thanks,
Mike

53384 is not a valid TG ID. According to the RR DB it should be 58384. 58704 should be OK. Are you entering it correctly?? Or are you maybe using 53704 or something like that. Do you have the bank and channels set to MOT. 600-09 is a sub fleet setting. I'm guessing it is purely a setting issue.

It looks like you have entered a fleet map for the system. Since this is a Type II system, there should be no fleet map.

Oops. I was looking at the wrong Redding system (there is a city and a county system). According to rrdb, it is type II. However, I noticed that some of the TG's in the db are in Type I format (but the note says that it went to pure type II in 2007). Sounds like you need a reply from a local. If none pipe up here, I'd try the California forum at RadioReference.

That's what I had to do to get Win-96 to work.

When I tried that with IE and that still didn't work; using safe mode IE (that started) I started disabling add-ons and nothing worked until I disabled the Google tool bar, all 3 components of it, which I don't remember installing.

I should have said...Windows XP Pro Service Pack 3... I did find a
solution to my issue...delete the program only...not using the
uninstall option..just drag into trash the Win96 files and re install
the latest version..
it will open but at first start up select the open file option and
open your file and it works fine..John

No significant problem here with XP SP3. I have noticed that starting anything on the Internet takes longer, but everything is running normally. I've also noticed over the last two years that my boot up time (power on to usable) went from 30 seconds to about 4 minutes now. All for their 'security' fixes.

12660. Weather alerts

Yahoo group: PRO-96 (2008 — 2017)
Date: 2008-05-28 16:49:13 UTC
From: newnethboy
Topic: 12660 Message: 12660

When I first read the Pro-96 manual, I didn't understand the section on Weather Band (pp. 65-66). I just re-read it and I still don't get it.

1. The manual tells of a FIPS location code and an event code, but goes on to explain only how to find and enter the FIPS code. Can an event code be entered?

2. When the Pro-96 is set to monitor for an alert, is other scanning/monitoring kept on or turned off? Is there an option on this?

I'm wondering if I could use my Pro-96 as a weather alert radio, say, have the Pro-96 on standby, for example overnight, when the "scanner" is "off" and then if during the day I could be scanning and still have the weather standby in effect.

(I program with Win96.)

12661. Re: [PRO-96] Weather alerts

Topic: 12660 Message: 12661

1. FIPS codes are entered by you (to limit the alerts to the counties you want to rx from). Event codes are what are sent by NWS to identify the type of alert being received. You do not enter these.

2. You can either scan or have Weather Standby.
IIRC, you can have weather priority running while scanning, but the audio will be interrupted every 5 seconds, the alerts will sound regardless of the entered FIPS, and you will not get a visual indication of the type of event. The only way to both scan and have Wx Standby (with FIPS and event display) would be to have two complete receivers in the scanner.

If you're going to use the weather alert, be careful how you set the backlight delay. See message #9423. Apparently a slight design error. Others have been able to duplicate the problem.

12663. WIN 96 & RR Import Problem

Yahoo group: PRO-96 (2008 — 2017)
Date: 2008-05-30 11:18:30 UTC
From: Ed
Topic: 12663 Message: 12663

Disclaimer 1: I know there are some clowns on here who like to jump all over people when they have a problem so let me start off by saying: I am not a newbie and I have been using the program and happily recomending it verbaly, on the Internet, and in print since 2004.

Disclaimer 2: Spelling is not my forte and I do not have an opportunity to spell check this post.

With that out of the way:
Using Version 1.54, when I do a web import from the RR conventional database, 3 out of 4 times the program will lock up when doing the import after I click the button on the bottom of the page after selecting frequencies I want to import.

The frustrating thing beyond the initial lock up is, to get out of it I have to go to the task manager (CNTRL,ALT,DEL) and end running the program, thus anything downloaded prior to the lock-up and not saved is lost.

Has anyone else run it to this or have heard of this before?

Thanks & 73,

Eddie Muro K2EPM

I may have found a possible "cause" for the lock up:

I just went to try to recreate the file I was working on, which happened to be for Middlesex County, NJ and I was going to add convention frequencies to an already established bank.

So, I went to the RR web import section of the program and started to compile my list of what I wanted to import....when all was said and done, to the best of my reccolection I had duplicated what I had done earlier....end then I noticed the number of frequencies checked off for import plus what was already in the bank was over "50". (as in CH 00 - 49)

So, I unchecked a few frequencies to bring the total under 50, hit the import tab and it worked like a charm. I then saved the file and that's where I am at.

I guess it could be a cause, but one would think that Don worked in a pop up to warn you that you could not download that many number of frequencies in to a bank.

I haven't attempted to replicate your problem, so I don't know if this will fix it, but even so, I recommend you upgrade to v1.55 (free--download, install, use same username and license).

Tip for if you do upgrade: Afterwards, manually download and "install" (copy to Win96 folder) the latest Help file.

I further recommend that you try download operation (deliberately wrong, to test) in the newer version, and if it still kills the program, email directly to Don a description.

Topic: 12663 Message: 12666

```
> one would think that Don worked in a
> pop up to warn you that you could not download that many number of
> frequencies in to a bank.
```

He did:

```
if ( channels > _ChannelsPerBank )
{
CString str;
str.Format( "You've selected %d frequencies, which is more than the number
of\n"
"channels in one of the scanners's banks. If you continue,
only\n"
"the first %d selected frequencies will be imported (subject
to\n"
"the 'First target channel' setting you will select
momentarily).\n"
"\n"
"Do you want to import anyway?",
channels, _ChannelsPerBank );
if ( IDYES != ::AfxMessageBox( str, MB_ICONEXCLAMATION | MB_YESNO ) )
return;
}
```

Something is happening before that warning pops up.

This list is for discussion about anything related to Radio Shack's GRE built PRO-96 Digital capable Scanner. This includes Any and all Software for the PRO-96. You can also place your p96 data files for WIN96 software in the files section.

We are the official recognized List by both GRE America, and Radio Shack, And Starrsoft software For the PRO-96..... Several Members are on this list and Our Sister List.

Thanks for your support

Group Contact, subscribe & unsubscribe info:

Post message: PRO-96@yahoogroups.com

From: newnethboy
Topic: 12663 Message: 12668

I just re-read your description, and saw something I'd missed before: You were adding your download to an existing bank. That might have flummoxed the program. Here's what I could see happening: You download less than 50 frequencies, so the warning doesn't pop up, yet because you are exceeding the 50 the bank can handle (because of the freqs you already have in there), during the actual download the program freaks (like the pun?).

Seems to me the better practice is to do all downloading to an empty bank, better yet to a new file. After you've downloaded, copy freqs to your existing bank(s). Advantages:
1. Doesn't confuse the program.
2. Saves you from corrupting/losing your original file.
3. Allows you to download en masse and then place freqs exactly where you want them.
4. Allows you to build "library" of freqs that is separate from your actual scanner set-up.

Also, I strongly recommend always saving the changed file under a new name, thus preserving the old file intact and unchanged. This way, you have something to fall back on if somehow the new file doesn't work. (I save versions with the modified-date in the filename, which immediately identifies the file and also gives it a unique filename.)

All good points! I have been using dates on my files for years now (going back to my BC245XLT)...there's nothing worse than loading in a file such as local.p96 and getting out in the field to find that controal channels have changed, etc.

73,
Ed

According to the Newark Advocate newspaper, Heath, Ohio is switching from their analog 800 mhz system this week to a P25 (not on marcs) system. Has anybody heard any info on frequencies yet. Its a Johnson system from Texas per the newspaper. I do see what appears to be radio service trucks at the Heath city building.

If the antenna was attached directly (not through a feedline) to the scanner, you likely broke the connection under the connector by over flexing it (between the connector and the circuit board). Repair time, sorry.

If it's anything like Toledo/Lucas County's similar switch, you may be S.O.L. as the PRO96 works fine with MARCS here, but horrible with a multi-site simulcast P25 CQPSK system. Your mileage may vary, but maybe you'll luck out as it's probably a single site.

12681. Los Angeles newbie needs help getting started

Yahoo group: PRO-96 (2008 — 2017)
Date: 2008-06-09 07:04:55 UTC
From: inserteditnow
Topic: 12681 Message: 12681

I'm sure I'm the one-millionth newbie to ask for this kind of help, so I apologize for the redundancy. But hey, we were all beginners at one time, right?!

The super-short version is: I'm looking to find someone in the L.A. area to help me program my new Pro-96. And I'm willing to pay someone to help me do that.

Now here's the background (for anyone that might care.)

I remember as a kid listening to my dad's HAM receiver. I'd simply rotate the dial, maybe adjust the squelch, and bam - there I am listening to conversations or morse code from all over the world. I've also always been interested in radio talk from local police, fire, and other local services, partly because I like to know what's going on in my community, but I also enjoy learning about the different 10-codes that are used.

So, I recently took the plunge of buying myself a scanner (I had sticker shock on this one! but managed to find it on sale for $350.) And since owning it, I've . . . been able to tune in the weather!!! So you can imagine my disappointment.

From what I've read, the only way to go, is to get the software and the cable. However, I'm a Mac owner, and don't plan on buying a PC only to program my scanner. That's where YOU come in, my friendly and willing to share neighbor in Los Angeles. I'm willing to help you offset your expenses of buying the software and cable by helping me to program mine.

Like any hobby I guess, the more you get into it, the more you realize there's a lot to learn!!! I'm a bit overwhelmed and would truly appreciate the help. I live in Studio City and will certainly drive to you if you're willing to help.

Thanks in advance for replies. (well, at least the helpful and non-flaming ones!)

Matthew

I am sure I programed mine different than all of you. I just took mine to my local Radio Shack and they programmed it for free for my area.

I am mostly just want to listen to the emergency stations anyway.

However one day I would like to program it to listen to the air traffie as well.

I took the simple route.

Hi Matthew,
Congrats for remembering how ham radio is fun - and it can be as simple as a spin of the dial and squelch.

Your best bet is to find somebody in LA with a PRO-96 - then all you need is an 'audio' cable to connect your two radios and 'bam' - you've got a 'clone' of their radio! Pretty simple actually, and probably all you'd have to do is to meet them for lunch (and buy them lunch) and it's done in 2 minutes!

Good luck, and don't give up on radio - it's still fun.
And don't forget to program some ham radio channels into your radio - that you can easily do without a computer or software.

73's
John

I did the same thing when I got my first scanner several years ago (a Pro-95). Then I lived in fear of accidently pushing the wrong button and messing something up - which I did and had to go back to Radio Shack twice more and have them reprogram it for me. It's a good way to start out and buys you some time to go through the manual over and over and really learn how to do it yourself. After having my radio about 3 months, I was able to completely re-do what Radio Shack had put in, and fix it like I really wanted it.

As for listening to aircraft, you can do that right now by pressing SRCH at the bottom left. That will take you to the Service Searches and then you keep pressing SRCH until you get to Aircraft (written at bottom of screen). Then you just listen, and if it gets stuck on an open carrier, you just hit the up or down arrows at top left and it moves on. You may need to adjust your squelch if it's set too high. Just turn it until you hear static, and back it off until the static disappears and then a little tiny bit more.

Happy scanning!

No. LCN means its in the logical order. There is no way to fool the
radio. Channel 1 must be in the channel 1 slot.

Hi there, I am quite new to the group and was hoping that I could find a file for the Mpls, MN PD/FD to upload unto my Pro96. I check the files but only found files that pertain to St. Paul and other locations in Twin Cities, but not Mpls proper. Plus I noted that the files are somewhat out of date due to St. Paul going digital and rebanding issues in our area.

Can anyone offer any advice on where I can get a good/current Mpls file, I'd also like something that had area ambulance/EMS channels.

Thanks in advance.

1. Make sure your serial port is set correctly. Mine is on comm 6. I don't know what yours might be.
2. Make sure you have the stereo-to-mono adapter cable plugged in.

First of all, you've got the right cable (if you're truly using the one with the part number you gave--has an orange case in middle). Secondly, with Windows "things happen", changes sometimes just occur. So do the following, testing after each step, until it works (then don't mess with it any more):

1. Check connections. Unplug and replug a few times. Try a different USB port. (USB ports are prone to fill with dust; vacuum before using a port that hasn't been used lately.)
2. Verify that the USB driver is simulating a serial port and that it's the same port that Win96 is looking for. (Sorry, I can't give you detailed directions; I'm away.)
3. Reinstall the USB device driver (run Install from the CD).
4. Uninstall and reinstall Win96 (AFTER making sure you have your username and license number written down in a secure and accessible place AND you've backed up your data files). (Make sure you have v1.55 or newer. Your license from any recent version is still applicable, i.e. your upgrade is free.)

Let us know what the problem was (if you can discover it) and/or what fix worked.

Plug it into the computer WITHOUT the scanner attached, let it be discovered and THEN plug in the scanner. If you don't follow this simple format, the discovery process can fail, thinking the combination is something else, like a mouse.

Mono adapter not required for this scanner or the other 10 in top listing. The latter three require the cable.

Below copied from the pdf on disk with the cable.
☐ Compatible with the following scanner models: 20-196, 20-427, 20-428, 20-466, 20-496, 20-515, 20-522, 20-523, 20-525, 20-526, and 20-527.
☐ When combined with the conversion cable, your cable is compatible with the following scanners: 20-426, 20-501, and 20-524B.

I have done many and never had a problem with the upgrade. I turn the scanner on and right when I turn it on (while the power on messages are still on the screen) I press "0" then "PGM" then "enter" in that order. Just a note if you are using the scanner to receive an 800MHz APCO 25 state system normally the DSP 1.2 works the best. I you are picking up a APCO 25 simulcast system then 1.4 works the best.

Good Luck,
Mike

Some UHF Apco25 MOT Systems also work best with the 1.2. LAPD for example intermittently loses sync when I upgraded to 1.4.

I'm not sure you can. RadioShack has a serial cable, 20-049, but it's not listed as compatible with the Pro-96. The 20-047 is a compatible cable, but it's USB.

Now let me ask you: Is there a reason you can't use the USB cable? Does your computer lack a USB connection, or are you running Windows95?

Or are you reading the directions for Win96 and seeing reference to a serial connection? If it's this, you need to get, install, and read the directions for the 20-047 cable; it tells you how to set Windows so it sees the USB cable as a serial connection. (Then you need to set Win96 to see that port.)

Topic: 12709 Message: 12711

>Moderators note<

The serial cable has been a discontinued item from Radio Shack which was compatable with the 96. The USB version is the only cable available for the Pro93, 95, 96 style radios.

>End note<

Serial Cable..Radio Shack .com.... Better Yet get the USB version from
GRE.com Far better... JG

Yes, go to a channel you can afford to change (or a blank one), press PROgram then the frequency, including decimal. When done, press scan or manual to leave program mode. If you program by computer or front panel, the radio will round out to the closest standard (what it thinks is standard anyway) frequency.

The difference between .5375 and .54 is not enough to cause a problem (2500 Hz), even on narrowband (where low volume may be a larger problem).

12724. EDACS question

Yahoo group: PRO-96 (2008 — 2017)
Date: 2008-07-08 21:38:13 UTC
From: Joseph DiPaolo
Topic: 10353 Message: 12724

Forgive my ignorance in the programing world, but I use Radio Reference and do the downloads - which have worked well, except for an EDACS system.

I downloaded Camden NJ, an EDACS system, and after putting the frequencies in the correct order (1 through 5) I am getting a lot of activity. This is BANK 6.

My questions are basically these:
1) Do the talkgroup IDs have to be in frequency order? I notice some are not.
2) Is it possible to load another EDACS system (Cherry Hill - a city near Camden) into the same BANK 6 and where would those control frequencies go (as well as those tlakgroup IDs). I DID load in the Cherry Hill frequencies but hear no activity there
3) Finally, can conventional frequencies be loaded into that same BANK 6, again where would they go.

Sorry if this is a dumb question or if it had been gone over before. I did a search of the board but got more confused!

Thanks in advance.

Joe D.

Topic: 10353 Message: 12725

Joe,

You can not put two EDACS system's in the same bank. If you want to monitor Cherry Hill as well as Camden you will have to put Cherry Hill in a different bank and put the all the frequencies in the proper LCN order to get it to track right.

1. TG ID's do not have to be in an y particular order. Only the freqs. and the LCN has to match the channel number. For example, LCN 1, has to be in channel 01 of the bank...not 00.

2. Only one EDACS system per bank.

3. Yes, just start listing them after the last freq of the EDACS system.

These are not dumb questions...that's how we learn, by asking questions. The only dumb question is the one never asked!!

Enjoy and good luck!!
Mark

> are not.

1. I don't think you're talking about frequencies when you're talking about talkgroups, you're talking about talkgroup IDs. I don't think they need to be in any particular order.

> 2) Is it possible to load another EDACS system (Cherry Hill - a city
> near Camden) into the same BANK 6 and where would those control
> frequencies go (as well as those tlakgroup IDs). I DID load in the
> Cherry Hill frequencies but hear no activity there

2. Here's where we talk about frequencies and order. The control channels (frequencies) MUST be in the scanner channel that is the same number as the number of the channel in the RR table. For instance, for Camden City, using Bank 6 of your scanner, channel 01, 851.16250, MUST be in scanner channel 601 (NOT 600). Same with channels 02 through 06 in this case.

Therefore, with an EDACS system, you can never put more than one system into one bank. (How could you put Camden 01 and Cherry Hill 01 both into 601?)

> 3) Finally, can conventional frequencies be loaded into that same
> BANK 6, again where would they go.

3. Yes. Put them into any channel in Bank 6 OTHER THAN 601-606. (You can even put a conventional frequency in 600.) I would recommend that you think out the order for your conventional channels so it makes some kind of logical sense, e.g. put a conventional system of 4 frequencies into a spot where frequency 1 is in, say, 611. But the scanner doesn't require that; your brain might.

>
> Sorry if this is a dumb question or if it had been gone over before.
> I did a search of the board but got more confused!

Reply A: The only dumb thing here would be to have up to $500 tied up in a piece of electronics that you can't get any use out of. Asking how to make it work is anything but dumb.

Reply B: Confused? There's an old adage, "To operate a wheelbarrow, first you gotta be smarter than the wheelbarrow." Well, few of us are smarter than the Pro-96 "wheelbarrow", or digital trunking (and I'm not one of them). I need help with this, you need help with this, most people need help with this. (You'd be amazed how many posts I've seen expressing bewilderment about trunking and the signature contains a HAM radio callsign--even these radio hobbyists can't figure this stuff out without asking questions!)

>
> Thanks in advance.

You're very welcome.

One further hint before I close: If you download from RR, keep the bank intact in your file. That is, don't try to copy the trunked system bit-by-bit to another bank or another file; use Edit>Copy Bank instead. You can add conventional freqs to that, afterwards.

12728. Lost all power

Yahoo group: PRO-96 (2008 — 2017)
Date: 2008-07-10 01:47:30 UTC
From: agave7
Topic: 12728 Message: 12728

Hi

I tried to turn on my Pro-96 today and it's completely blank. No power at all. I've used two different sets of batteries and an AC adapter, and nothing will get it to turn on.

I last used it about two weeks ago with no problems. I usually power it with NiMH batteries in the yellow case, but I also plugged in the AC adapter last time I used it because the batteries were low. The adapter I use only puts out 5V, but it's enough to run the unit, and it's the proper plug size (B).

Does anyone have tips on what I can do to try to get it to work? Or will I need to send it to Radio Shack for service? If so, how much will that cost me?

Thanks

DUDE! I just re-read your message: You need a different power supply! Unit calls for 9V, not 5. If you've been powering it on 5V, I SINCERELY HOPE you haven't burned out the scanner! (Low voltages can kill electronics, too.)

But best-case, your wimpy power supply is not recharging your batteries (which usually go dead after about a week or so). (In fact, it's probably draining them.) Either recharge your batteries on a proper charger or put a 9V power supply on this puppy. Try Test #2 below first, to assure yourself that you still have a scanner to be powered.

You need a power supply that puts out not only 9V, but at least 300mA. Also, this scanner needs a C Adaptaplug, and make sure you get the polarity right: positive on the tip.

[I wrote the below before re-reading your message. I've left it in for general information.]

Do you have a battery tester or a multi-meter? If so, test the batteries, one by one. If you have a multi-meter, test the voltage of the power supply.

But here's some things to check first:

1. Remove the battery case cover, remove the yellow carrier, remove all batteries, then put it all back together. Try the scanner.

2. Remove all as above, try different (known-good) batteries (new alkalines, or borrowed from somebody's Walkman, etc.--if you don't have your black battery carrier handy, you can put these in the yellow but definitely do not connect the power supply while you have non-rechargables in the yellow carrier). Try the scanner.

3. With all batteries removed, plug in to power. Try the scanner.

#1 tests to see if perchance something got loose, or batteries got to not making contact.

#2 tests to see if batteries you had in it are bad/uncharged.

#3 tests to see if batteries were messing up delivery of power through the power supply.

My guess (and my hope) is that the power supply is messed up. The rechargable batteries do not normally hold a charge for more than a week, so they may be good but dead, and not getting recharged. If this

is the case, the non-rechargable, known-good batteries should make the scanner work.

Hoping the best for you!

Truly humbling! You're in lots of company, though.

You know you've got some serious equipment when your computer needs a computer to program it! As you know, only the truly brave (and foolish) attempt to program a PRO-96 without Win96; I don't even change lockout settings without Win96!

And then, we not only have to understand the scanner, but we have to understand all this new radio stuff--tough for those of us who started with low-band VHF simplex! (We were smarter than those "wheelbarrows".)

Have fun!

Hello group,
My question is, using the cloning cable used to clone a
two Pro 96s, Can I also clone a Pro 96 onto a Pro 2096? I was thinking
I could since they are the same basic unit just one is handheld and the
other base. Thanks in advance for the help.

Nope. Their structure in completely different. A PSR-500 will clone to a PSR-600.

I think Don Starr's Win500 program will import Win96 files and convert them to Win500 but this is not something I use personally.

I use the PSREDIT software. I connected my Pro-96 with it's programming cable and use the import feature in PSREDIT to download everything in my Pro-96 into the software. I then made any changes I wanted to make in the software and then using the programming cable for the PSR-500 and the PSREDIT software I uploaded everything into the PSR-500 and it worked great and saved a lot of work.

In Win96, on the first page, set the priority channel to the weather channel (it's a check box) then enter the channel number of the weather channel in your area. When scanning, turn on the PRI feature and you're looking for the 1050 Hz alert tone (not the data burst). (Page 40) It doesn't work while listening to a trunked channel. Manually programming it is on page 41-42.

If you enter the SAME codes (lockout works the same as a talkgroup or channel, so you ignore some codes) then when you put the scanner in the SAME standby mode (page 64) while you sleep (it WILL wake you up if the alarm goes off). The display will show the type of alert. How to enable that mode is on page 65.

I hope that helps.

Well, our dearly-beloved RadioShack is at it again, losing themselves customers.

I went to my local store to order a replacement beltclip for my Pro-96. (I've also learned my lesson and I ordered the leather case from ScannerMaster.) At the RS, I was told, "We don't have it. Try Fry's Electronics."

So I went to the RS Website. Looking for parts got me to a place where I was supposed to locate my local store!

I phoned their
"Contact us anytime
We can help you
☐ find products
☐ choose the right stuff
Call 1-800-843-7422
Hablamos español 1-800-843-7422"

number and after 3 min, 20 sec working through a phone tree, finally got into a queue for a live operator, where I waited another 3:20 to reach "Eddie", who told me to go to the local store!!!!

I told him that RadioShack was trying really hard to lose a customer, and if he couldn't help me, please transfer me to someone who could. He transferred me to a number where the machine said they're there during normal business hours (this was Friday at 5:20 PST). !!!!!!! (or maybe #%@^@*&^)

So:
Does anyone know how to get parts?

Does anyone know the name and address of the RS CEO?

12747. Problem with BNC connection

Yahoo group: PRO-96 (2008 — 2017)
Date: 2008-07-21 00:13:45 UTC
From: rolf_baehr
Topic: 12747 Message: 12747

Hi all,

I see this issue with the Pro-96 has been discussed at lenght, and I see similarities with some of the cases with what I'm seeing, but thought I'd check with the group before digging into this thing.

What I'm seeing is, (and it happens with multiple antennas), when I'm receiving, if I move the antenna back and forth a bit (there is a bit of play in that regard with a couple of my antennas, but some are quite tight fitting), I notice a drop in signal strength, especially on VHF. The local WX broadcast is a good check. It will go from full quieting, to a somewhat weaker signal with some background noise. I cannot see that anything with the bnc connector on the outside of the radio being loose.. all appears tight. This scanner if about 8 months old.

Does this sound like that wire coming loose / breaking problem that many of you have experienced? So far, I'm not seeing complete loss of signal, just a drop in strength.

Any inputs appreciated. Sounds like something I might be able to fix myself. Maybe I can check with a local electronics repair shop as well. I'm in the Loveland, CO area north of Denver.

Many thanks!

Rolf

12748. Pro-96 issue

Yahoo group: PRO-96 (2008 — 2017)
Date: 2008-07-21 03:15:21 UTC
From: racerpgt@aol.com
Topic: 12748 Message: 12748

Hi all,

I own an early model of the pro-96 from when they first came out. The CPU is version 1.1 and the DSP is upgraded to 1.4. My problem is that after about 10 minutes of scanning (Montgomery County, MD police and EMS) the reception gets lots of static and then gets almost completely garbled after 20 minutes.

I compared the radio to a friends who has a pro96 with cpu 1.4 and his remained crystal clear. I sent the radio in to radio shacks repair shop. They tested it in Florida and found no problems.

Anyone else with an early pro96 cpu scanning MoCo have a similar problem?

Thanks,

Matt

Rather than trying to get to the CEO, try their Investor Relations Dept. I've had decent luck with other companies and have seen others have REAL SUCCESS using this avenue.

Here is the contact info.:
Primary IR Contact
Investor Relations
RadioShack Corporation
Phone: 817-415-3021
Fax: 817-415-8994
E-mail: investor.relations@...

I have found that explaining your unbelievable experience and history with their company adds to the urgency they may respond with. We all know this company used to have knowledgeable people behind the counter but those days are behind us. IR may need to be reminded that their new direction isn't working for those who supported them before the days of cell phone and PC sales.

Rolf,

Yes, it's possible that you have a failing connector (or the wire attaching the connector to the board). Since you tested with several antennas, a (near) break seems likely (or a bad solder job).

The problem: The small size of the BNC (designed to match the smaller coaxial feedlines) does not give it much physical resistance to flexing the components of the connector, which stresses are passed to the attached wire. Add in that most manufacturers use cheap (as in poor quality $.10 versus $.75) parts and you have a situation where even normal use can cause a failure. (The 'moment and arm' of the leverage applied to the connector exceeds its ability to maintain integrity. It's too easy to flex the crap out of it)

Is it fixable? Yes. By you? It depends on your ability to safely open the case, remove the shielding panels (well soldered in) to gain access to the wire and connector and how well you can solder (small tip, low heat, not a typical soldering gun). Then you compare your ability to the cost of the radio (and your time) to consider the risk factor should you fail to do it correctly. Any competent shop (i.e. a REAL radio shop, not the counter monkeys at RS) should be able to fix it, for a small fee. Or you can send it to the RS repair center for a small fee.

I would suggest, that if you have to replace the wire behind the connector, that you use a little bit more wire and make a slight corkscrew (a small spring) so it has the ability to flex a bit more than the original design. The connector (even the better ones) will flex and the wire is typically not allowed to absorb that flex, so it breaks. It should still be as short as possible for technical reasons, but a LITTLE bit more is ok.

There's a really simple way to prevent damage to the antenna connection, or to prevent an already damaged connection from worsening. ALWAYS remove the scanner from the belt BEFORE sitting down, and ESPECIALLY remove it from the belt before sitting down in a car. Sounds too simple to be true, but it works.

I no longer have my early model Pro-96 but I do have a late model and have found that DSP 1.2 works better on my local Michigan State digital APCO25 system. The system I monitor is not a simulcast system and the DSP 1.4 was to help with the simulcast systems and you can download and go back to 1.2 off of the radioshack website. Just something to try. When I when to 1.4 the scanner audio broke up a lot or went digital and not the case with 1.2. I also tried 1.3 and it still whent digital but not as much as 1.4.

Your 20-289 is supposed to work. For more info, look at
http://www.starrsoft.com/software/win96/cables/cables.html (cable is
NOT available; page is behind on that point--but no matter since you
have one). Do note, though, that Don Starr says that cable is not
completely compatible with your serial port. I urge you to read page:
http://www.starrsoft.com/software/win96/cables/GRE_cables.htm
before you decide to use that cable.

Meanwhile, I assure you that the 20-047 cable works fine.

All the best on your scanning and on beating the cancer.

12758. Re: Problem with BNC connection

Yahoo group: PRO-96 (2008 — 2017)
Date: 2008-07-29 02:06:29 UTC
From: rolf_baehr
Topic: 12747 Message: 12758

Richard,

Well, I wish it WAS that simple ;0) I actually have never used the belt clip, and rarely carry it around much except in the house and a bit outside. I've actually noticed that some of my portable antennas bnc connectors fit much looser onto the bnc on the radio than others, and it seems that may be more of a problem than the connector / wire issue on the radio itself. I mess with the antennas ocassionally when receiving, and some antennas seem to lose signal strength easier than others. But I hate wiggling those antennas around too much... probably causing more damage doing that than if I just leave well enuf alone. The loosest antennas as far as fit onto the radio bnc's are my Max Systems 800 antennas. They really wobble around on that connector.

So I think I'll wait until it actually dies on me ... then we'll know for sure.

Anybody else experience similar problems? Just not sure if it's the radio yet or not.. have been very careful with it, and it's only 8 months old (which I know doesn't guarantee anything).

Rolf

That cable will work just fine on your scanner. That's the cable I used just this weekend up update my -96 and my 2096 both.

I don't use the USB-Serial adaptor though. I have a modern motherboard that has a real serial port.

As long as you have the drivers loaded for your adaptor though, it should work just fine.

Hi Richard, if you remove the aerial and see if there is any movement on the bnc and / or get a pen and try to move the inner section of the connector, if you have movement the problem is inside the cover need to purchase a new bnc and replace it, this is what i have found

You don't need drivers for serial cables such as the 20-289.

From: rolf_baehr
Topic: 12747 Message: 12764

bruno and Richard,

Not sure how much actual "force" would be required to move that inner part of the bnc on the radio (white part), but mine appears tight. I inserted a small screwdriver between the metal outer housing and the white insulator stack, and with what I would term a fair amount of force (considering the size and weight of what we're dealing with), I couldn't get it to really budge.... and the connector itself will not move on the housing of the scanner, so I'm thinking mine might be ok.

The other thing that I've tried is the "o-ring fix" ... (see other postings in the group). I've inserted an o-ring in the radio's bnc connector around the insulator stack and the outer housing. It's a snug fit and goes down to the bottom of the connector. Not only would that provide some additional support to that insulator stack, but it has really stiffened up the antenna when I install it onto the radio, and once doing that, I can't budge the antenna at all, and tugging on the antenna won't bring about the decrease in signal strength that I was noticing when wiggling around the antenna before installation of the o-ring. It does take a bit of additional force to get the antenna installed on the scanner (the final bit of turn on the rotating locking collar), but once on it pretty much becomes "part of" the radio itself. I suppose that not having any "give" at all might present it's own set of problems if the antenna is bumped alot ... no give with the antenna might apply additional damaging force to the radio's bnc housing. So additional caution will probably have to be used in that respect.

I rarely change antenna's, so I'm going to leave the Max 800 antenna on it full time with the o-ring and see how it goes.

Rolf

For what it's worth, my Max 800 antennas (I have 3 of them) are loose and wobbly on all my radios. I think it's just the way they're made. They are great 800 MHz antennas - except for the shape - don't sit down with your radio hooked to your back pocket with one of those on it!

Your USB adaptor should have come with a disk that has the driver on it.

If you don't have the disk, you might check the manufacturer's website and/or put the model number in Google and see what you find.

If your lucky... just plug the adaptor in (without the scanner or 20-289 cable attached!) and perhaps XP will pick it up and find the drivers for you.

Also, try posting the brand here... maybe someone else has the same one and has a source.

Good Luck!
Bob

Interesting, I have 2 of them, and both of mine are the same way. When you wiggle yours around, do you notice any interruption in signal? If for example I'm locked in on a weak vhf signal, such as a WX channel that isn't real close, if I wiggle that thing around, the signal won't usually completely drop out, but I do get an increase in background noise (aka weaker signal). And occassionally, I'll notice a DTRS drop out as well. Not knowing for SURE if it's an internal radio problem, or just flaky connections between antenna and bnc connector, I hate to send it in for repair.

Inserting that o-ring into the radio's bnc connector definately helped stiffen up that Max antenna.

And yeah, that antenna could be deemed a lethal weapon in many places.. definately not the most portable portable antenna, but the best I've found!!

Serial Cable: With my ancient HP desktop, I would have to have the Serial Cable plugged into the computer when it booted-up, then it worked great, but not always when I plugged it in after it was running.

As far as XP recognizing the USB cable, I thought the instructions said NOT to let XP pick the drivers and to force it to use the CD-ROM that came with it for the drivers instead? Does the XP driver work okay for both uploading AND downloading?

Thanks,
John

One of the minor tricks is to NOT have the scanner attached during boot up or when attaching the cable. Attach it after the cable is plugged in. The XP discovery may read it wrong if you don't follow that pattern.

The USB cable driver is specific to the chip inside (not all are equal). If the driver is already installed, XP will recognize the chipset and install the proper driver. If it is a new chip, you'll need the CD (which may have a newer version of the driver too).

There is a downside of the O-ring use. If you look at the mechanics of the plug, the farther IN you can drive the center pin, the more contact will be made. Putting an O-ring around the base of the connector will push the pin out (because it pushes the plug away from the socket). So if you have marginal center pin contact to start with, the O-ring can make it worse. Wiggling the antenna (or connector) and seeing variations in signal strength means you either have a poor connection and/or a broken wire on the inside.

An O-ring makes a tighter mechanical connection on the outer layer of the plug, but not the internal pin (which contains the signal) where it matters. Even if it did stiffen the internal pin, it would only cause any external physical stress to be passed through the pin, making the internal wire flex more and eventually failing (unless some flex for that wire was designed into the radio.

BNC, while commonly used, is a poor choice for critical signals (screw on connectors are a better choice). BNC is common because it is quick to use and cheap. Some BNC connectors are cheaper than others, which only aggravates the problem. You get what you pay for, as usual.

Jeff,

Don't know if you've seen my current posts about possible problems with my BNC on my Pro-96 or not. I was experiencing intermittent signal strength drops, especially on VHF, when wiggling around my portable antennas. I did notice that the antennas really wobble around on the bnc. I saw your posting about the "o-ring" fix, and I dug thru my o-ring collection to see if I something close to what you recommend.

I never saw anything in your postings on exactly where the o-ring actually goes, but I found one close to your suggested measurements. I pushed it down into the connector that is on the radio, and it went around the white insulator inside the metal housing. I then put my antenna on and it did make a HUGE difference.. no more antenna wobble. I did have to push down pretty hard on the antenna to be able to lock the collar onto the connector, but once I got it on there, it seems to eliminate any connection problems.

Is that where you were putting your o-ring? Based on your measurements, I think I got it in the right place.

Please let me know!

Thanks!

Rolf

No, I haven't noticed signal interruption from wiggling the antenna, although if a signal is weak, then sometimes moving the radio a few inches one way or the other can make a signal drop out or come in better. Good luck finding a solution!

> tools online what is 2047 the talkgroup isnt listed

RadioReference has 2047 as a "patch" talkgroup for Riverside SO, and my understanding is that when two TGs are patched, both of them "disappear" and the units go to the patch group... until they get un-patched, when they return to their previous TGs.

From: kb8rvp
Topic: 12781 Message: 12781

It looks like RS has reduced the price to $469.99 for the everyday price and it doesn't say sale on the website so it looks like the price is going down ahead of the new models coming out soon.

Perhaps it might be competition from the PSR-500/600, which are probably still a better value.

12784. USB adapter driver problem

Yahoo group: PRO-96 (2008 — 2017)
Date: 2008-08-08 17:45:32 UTC
From: agave7
Topic: 12784 Message: 12784

Hi

I am attempting to use a USB adapter to upload data to my Pro-96. I've used this cable before on a different computer, so I know the cable works.

When I plugged the cable in to my Vista machine, it automatically downloaded a driver, with no option to cancel the procedure! (Just one more reason not to use Vista...)

I have since gone into Device Manager and updated the USB Serial Port driver to the one on the disk that comes with the cable. That did not make a difference.

I was able to download from the scanner to the computer, but now I cannot upload my changes back into the scanner.

I have the correct COM port selected in Win96.

Any suggestions?

Thanks

Sean

Hello All,

I have had a rs pro 96 scanner for several years now and never had any problems w the scanner. However a couple of days ago I was doing a normal charge with the scanner and eversince it hasnt worked right.It seems to be scanning but wont pick anything up not even the weather,I have tried everything that I could in the manual including resetting and initializing the unit 1 time I was able to pick up the weather and 1 channel but nothing else. Since, it keeps scanning not stopping on anything. Any help or suggestions that anyone might have please let me know. Thanks in advance steve

Hi Steve,

Is this reception problem only in SCAN or is it also there when receiving in MAN? (The 96 didnt go into global ATTEN or global L/O mode did it?)
Loose or scratchy SQUELCH control ?

Using an outdoor ant ? Maybe a nearby lightning strike took out the scanner's front end.

Here are some common problems I have run into:

Loose ANT connection that finally broke free when moving the scanner around when charging.

New electronic device near the scanner causing interference.

Same reception problem on batteries as when charging ?
Check/replace the batteries.
Check the internal battery/charge switch which is part of the charging jack.A little shot of contact cleaner in the power jack, and working the plug in and out usually fixes that, unless the switch is degraded from using the wrong plug size.

Clean off all battery contacts and those from the scanner body to the battery holder.

Good Luck,
Jack
==========

Normal troubleshooting process would take me first to the batteries, since the last change before it went bad was a battery charge. Simplest approach: Remove batteries, insert plain old alkaline. (If your black battery carrier is not available, you can use the yellow as long as you are VERY CAREFUL to NOT CONNECT external power.) If it works, it's one or more of your batteries or your charger.

If it still doesn't work, check your antenna connection. Since it "appears" to work but receives nothing, this is suspect.

Third possibility: Try reprogramming.

I hope it's the batteries--easiest and cheapest to fix. But I hope you find and can fix the problem and get back to scanning.

Check your antenna bnc connection where it's soldered to the circuit board It's a bit more complicated than the Uniden due to the shielding they use but not impossible. Must be patient and be fairly good with the soldering iron.

From: Brian
Topic: 6767 Message: 12799

i have a pro 96 CPU 1.4

when i do a search in police and fire i run into this problem

the manual says 856.2125-860.9875 and 866.0125-868.9875

so why when i do a search it starts at 851.0125

i tried it both with extended frequencies on and off

i guess my only beef is that i use win96 or at least would like to use
it but it wont let you program anything under the 856.2125

also whats the differance between Pro 96 Manual and Rev. B Manual

12800. DSP factory tests mode--need info

12803. RE: help please

Yahoo group: PRO-96 (2008 — 2017)
Date: 2008-08-10 19:45:02 UTC
From: Don Starr
Topic: 6767 Message: 12803

Actually, the 800 MHz band has always started at 851.012500 MHz
for Mot (3600 bps) systems. That's Mot's "channel 0" for a non-
splinter system. (It could also be argued that such Mot systems
really start at 851.000000 MHz, since that's Mot's channel 0 for
a splinter system).

My mid-2003 PRO-96 has SR-3's Group 3 starting at 851.012500 MHz.

In any event, I've changed Win96 so that its SR-3 (Police/Fire)
search page reflects the ranges actually used by the scanner, not
those that are described in the manual. The new range limits for
SR-3, Group 3 are:
* 851.012500 - 860.978500 MHz on 25.000 kHz steps
* 866.012500 - 868.987500 MHz on 12.500 kHz steps
These ranges are used for display at the right-hand side of the
SR-3 tab, as well as the "allowed" values for that tab's Lockouts
grid.

Hi all: I just got a new power supply for my '96. It's a 9v 300 ma power supply. The tip fits in to the scanner a little tighter, but it's not like I have to force it to get it in. The only thing is my scanner gets pretty warm to the touch now.
I might just be paranoid because I haven't used the unit with ac power in a while and I might be forgetting that it gets warm, but I don't remember that from before.
Does anyone else find there scanner being warm to the touch when using a wall-watt?

Are you using the yellow adapter and leaving the cells in the scanner?
That may be the source of the heat.

I have had a 96 on a wall wart for literally years and it doesn't get
warm. There are no cells installed in that one.

A volt meter will tell you of course, but wall warts should be measured under load conditions. You might be able to use the battery contacts as the points for the measurement. I haven't tested this and the circuit may be diode protected. If that fails, you would want to open the case and carefully measure the voltage at the power plug WHILE the scanner is on (creating a load). If you don't have a meter, I'd bet you know someone that does. They can be cheap and even a Radio Shack or WalMart variety is adequate for basic measurements.

Now the bigger question is why GRE chose to use 9V in the first place, when 12-15V is FAR more common and certainly would have simplified my set up (I already have a couple 35 amp power supplies for other radios).

Hmmm...I wonder if there would be a way to test this?
I just don't want to fry my Scanner!
-John

I wonder if your adapter is putting out substantially more than 9V.

Just a hunch, but maybe it was because 3V is easier to dissipate (heat-wise) than 6V would be. Much of the 3V could even be done with diodes. For that matter, all of it could be done with four diodes while 6V would require eight and would generate twice the heat.

Just a hunch, as I said.

i have a Pro 96 with Duracell 2650 batts (batts are about a year old and for 6 months i didnt use it) and its always beeping saying low batts

i decharged them all the way via a mini mag light

i then put them in the charger for like 18 hours (the light went from red to green)

the carger holds 4 batts

1, 2, 3, 4
when they were done i moved them around

4, 3, 2, 1
when the light went to green agian i changed them to

2, 1, 4, 3
light went to green i changed them once agian

3, 4, 1, 2

i put the batts into the radio yesterday used it on and off total of maybe 6 or 7 hours and there dead agian (the backlight was not on)

anyone have this problewm ever

Maybe one or more of the batteries is defective? Try a different set and see if you get more "run time"; if you do, then a bad cell is the likely culprit.

Mine runs cool unless I'm charging batteries.

Since this is a new P/S, you might want to check the voltage and make sure it really is 9v.

Good Luck!

Subject: [PRO-96] unit getting warm

Hi all: I just got a new power supply for my '96. It's a 9v 300 ma power supply. The tip fits in to the scanner a little tighter, but it's not like I have to force it to get it in. The only thing is my scanner gets pretty warm to the touch now.
I might just be paranoid because I haven't used the unit with ac power in a while and I might be forgetting that it gets warm, but I don't remember that from before.
Does anyone else find there scanner being warm to the touch when using a wall-watt?

Last night as I was listening to my pro 96 I wanted to pause on the TG, but before I hit pause, I must have hit another button, because now if I turn my scanner off, and then on I dont get the alpha tags, I get the decimal ID's. I can push the text button, and it will go back to my alpha tags. However, if I turn the radio off then on again I lose the setting and it back to the decimal ID's once again. Does anyone know how to set them back to the alpha tags only, so that if I turn the radio off and on once again the alpha tags will be on? Thank you in advance for any help I can get on this.

Perry

WOW!!! The same problem has come up with my radio in the past three weeks or so. Date code is 5/05. I have had it since new, however this is the only device I frequently use AA batteries with so I had thought my battery chargers were defective.

I have a total of 46 AA NiMHs that I rotate through the '96 (mostly Energizer, some Rayovac, some off-brand), I have three chargers (two Energizer, one Rat Shack), and no matter what charger I charge which batteries in, and no matter how I put them into the battery holder, the radio seems to suck the life out of them like no device I had ever seen. In fact the RS charger I just bought a couple months ago.

I was just about to invest in new chargers and batteries, but this post has me wondering...

I use a Radio Shack 4-6 hours Battery Charger Cat No 23-1304. My Ac
Adapter is a Radio Shack Part No. AD-539 with an output of 9 volts DC
350 ma. I have all of these Items for about 1 year now and have
great success with all of the above. I can run the scanner for about
12-14 hours straight through without a problem. I do charge using the
wall adapter however I recommend using a separate battery charger.

Be sure and check each individual battery with a good battery tester. It's not unusual for one or more batteries to have lower capacity or to have died which makes the whole set look bad. Also, make sure that your batteries have the same mA hour rating. I've made that mistake before - the lowest rated battery goes out and the whole set looks like it's not working.

I've got three banks going in my Pro-96, and I can usually get about
12 hours of continuous use out of one set of rechargeable batteries.
I'm using the Energizer 2500 mAH Ni-MH batteries, and I have two sets
that I rotate out. So far it's worked fine for me.

One thing another Pro-96 advised me when I first got mine is to never
recharge the batteries in the scanner. I use the external charger
that came with one set of Energizer batteries.

i have a craftsman vol metter
i tried to check it but all i can get it to read is 1.2 volts i wana check to see if they are realy 2650's i tried AC/DC A - mA i also tryed mV DC

then agian i dont really know what im doing with this thing LOL

i try new bats

some one said theres is doing it and gave a date code my date code is 08A05

also if new bats dont work why do i get the sony bats they was talked about?

12838. copying from vfolder

Yahoo group: PRO-96 (2008 — 2017)
Date: 2008-08-17 16:13:49 UTC
From: steve
Topic: 12838 Message: 12838

First let me say I am new to the 96 and have yet to get a cable and software for it.

The manual says I can copy from one folder to another, if I am reading it correctly, but I am unable to figure it out. Any help would be great.

12839. Re: copying from vfolder

From: newnethboy
Topic: 12838 Message: 12839

Yes, you can. (In fact, that's the whole point of V-Scanners. You can have 10 [or even 11] different setups and switch back and forth in seconds.)

I'll say something in a minute about software and cable, but switching V-Scanners is one operation you should learn to do from the front panel without needing to re-read the instructions each time. Here's why:

Say a major fire breaks out in your area, with lots of mutual aid. You normally monitor local police and fire, and maybe local retailers or ambulance companies, etc., but now you want to hear everything on this fire. You have two choices: 1. What you can do with any scanner is to go through all your banks and turn banks and stations on or off. 2. You can switch to a V-Scanner which is set up for all area fire/mutual aid/major incident. The second is a lot easier! And quicker.

Okay, here's how it works (I'm going to use computer notation, where I give you keypresses, where a comma between keys means press one then the other, and a plus between keys means press both together, a notation within [brackets] means you have to choose what to enter there; and for clarity, I'm substituting a star for the period):

Get into V-Scanner menu:
PGM, FUNC, PGM

Save what's in your scanner now, placing it into the "scratchpad" (V-Scanner *):
1, ENTER, *, ENTER
(Scratchpad will be indicated as "#".)

When it's finished, press ENTER.

Load a V-Scanner into the main memory (starting at the V-Scanner menu):
2, ENTER, [V-scanner to load], ENTER, ENTER

When it's finished, press ENTER, CLR. Scanner will reboot to new scanner "personality".

Note: These directions are more fully given, not in the PRO-96 manual, but in the PRO-96 Preloaded Data Addendum, starting page 3.

Now, concerning the software: "To operate a wheelbarrow, first ya gotta be smarter than the wheelbarrow." The PRO-96 is a really smart "wheelbarrow", so most mere mortals can't figure out how to program it, especially when you get into trunked systems. (I knew I was in trouble when I turned mine on the first time and it didn't just go on,

it BOOTED!)

I HIGHLY RECOMMEND AND URGE the use of the Win96 software and the RadioShack cable part number 20-047. (It will work nicely if you follow the installation directions step-by-step and exactly for both the software and the cable. Read everything before doing anything.)

Not only does the software help you to do the programming much more easily, and to do some programming that can't be done on the front panel, but here's the best part: You can get completely built and debugged setups from others in this group, other groups, and from RadioReference.com. (When you get into trunking, you will be SO GLAD for this option!)

Enjoy your PRO-96 and this group!

I've accomplished this by loading the V-file into the active scanner and then saving it into another V-slot. That may not be the only means to accomplish it, but it is my workaround.

Buy a cable and the software. Is a much more user friendly device via computer than direct interface programming - esp with a Win96 import of system freqs.

Sorry, Steve; I missed your meaning. What Jon says will work, or with Win96, you can simply rearrange the V-Scanners by connecting the scanner cable, selecting Scanner>Virtual Scanner, Refresh, then WRITE your source V-Scanner to a file on the computer, and READ that file into the target V-Scanner.

Oh, another hint for when you get the cable and Win96: I still had the factory-set V-Scanners, and the first thing I did with the software was to Write these to files. That way, I could go ahead and put other stuff in there without losing those defaults.

12844. upgrading from apco-25 phase1 to phase 2

Yahoo group: PRO-96 (2008 — 2017)
Date: 2008-08-19 02:38:40 UTC
From: misticworrier
Topic: 12844 Message: 12844

Hi.

I have run into a very strange problem. I am using my pro-96 to listen to the Michigan state system. Itis an 800 MHz with apco-25 common air. I am using 1.2DSP, all of my talk groups are right on the money. The radio was working very well. On 4/18/08 I took the radio to Port Huron and did not hear a beep out of it. I rechecked everything and it was right. I have had the same radio in the upper part of michigan and had the same results in the U.P.

I might be answering my own question. The radio uses apco-25 phase 1 asrto 6.5 in April the state of Michigan did a up grade to apco-25 phase 2 astro 6.9. I would like to know if anyone in the state of Michigan is/or having the same problem and if an upgrade for phase 2 can be done for this radio.

12845. win 96 question

Noticed when reading the documentaion for win96 that it allows you to open the scanner up on what it can hear. Does it work well in the mil-air bands when opened up?

Topic: 12838 Message: 12846

Good point. All I want is the freqs and talk groups from one folder to be in another since that is how my layout is.

Basically, I have Ohio Marcs in bank 0, local and county police in bank 1, fire in bank 2 and air in bank 3. Skipped bank 4, and in bank 5 I have another counties trunked system. Nothin in 7-8 and in 9 right now I have Memphis, TN since I was there over the weekend, but plan on moving that to another vfolder all together. Its tough to fill any of the banks, There is only 2 trunked systems in my area.

I believe that P25 Phase 2 is a TDMA 12.5KHz 2 slot system.

I don't believe they are in production yet. I have no idea whether there will be a firmware upgrade for this.

Had Huron done a rebanding?

Good Luck

From: John Hyde
Topic: 12850 Message: 12850

Hi all: I'm wondering if there is a delay feature on the pro-96? A feature that would allow the unit to hold on a conventional freque or a tg for a couple seconds after a transmission...to here any follow-up comms?
I am blind, so if someone would be able to give me the keystrokes to turn it on...that would be greatly appreciated.
Thanks in advance.

For conventional channels, the Delay can be set on or off on a per-channel basis, just like "lockout" or "attenuate."

Iwould like to thank all of you who anwsered and those how are still thinking about it.

As they say in the sports world" on feather review" I have found out that the problem is in the radio it's self. The primary control channel (s) will go from 99% to 00% in less then 15 min from the controler from the tower that is about 10 to 20 miles away (the antenna is up on a 32 ft tower). If anyone who might have any information on service or a service manual it would be very helpful.

Thank You
Mark

I thought it was "upon further review"... Don't spill that drink in your scanner :)

Is it your antenna that is at 32ft - or the transmitter site you are referencing? Any chance it is a Motorola Intelligent Repeater that is only operational when a subscriber unit is within range, and therefore may drop out when not needed?

Jon

That's really odd. It works fine going from Win96 to Win97, but not the other way around.

I would say it might be a paste bug in Win96. I know there are some bugs with respect to copying the lockout flags the other way around, and copying the TGs, I think.

Do what I did. Go to your local firehouse and find a young kid who can program the radio for you. I know a young man who is a whiz at this kind of stuff and he fixed me right up. Of course, I only listen to local stuff.

Have you tried using the pre-loaded vscanner folders? It would be vscanner #7 for you. I'm not in NY though.

I see they added LTR capability to the replacement model (Pro-106). That's the only thing I wish the Pro-96 had :(Beats me why a $500 retail flagship scanner wouldn't have something as basic and common as LTR . . .

You're one of the smarter Pro-96 newbies I've seen, because you realize already that you're clueless with this scanner.

The Pro-96 or any other digital trunking scanner is way smarter than most of us. There are very few mere mortals who are smarter than these machines, and I think almost all of them are radio professionals. (I've even seen some posts here from very bewildered users who turned out to be HAM operators--even they couldn't figure this out.)

To use these scanners, you have to:
1. Understand trunking and digital trunking (way different from conventional radio).
2. Understand the scanner and its user interface.
3. Have access to all the specs and settings for the radio system you wish to program.
4. Put all that together and enter it into the scanner.

Good luck!

So here's what you absolutely must do:

1. Download Win96 from Starrsoft.com.
2. Buy the connecting cable, item # 20-047, from RadioShack.
3. Install both on your computer strictly according to the directions.
4. Find and download files for the systems you wish to program. (You'll probably want to buy a premium membership for RadioReference.com, but someone in your area might have better files.)
5. Load the file into Win96 and tailor to your wishes.
6. Load the changed and saved file to your scanner. (Hint: Save the new file with a new name, so you don't corrupt the one you got from RadioReference or wherever.)

I get nothing from Starrsoft or RadioShack, but others will tell you this is the only way to go.

Enjoy.

12881. Logic Trunked Radio LTR

Yahoo group: PRO-96 (2008 — 2017)
Date: 2008-08-24 02:58:40 UTC
From: BSugarberg
Topic: 12781 Message: 12881

Logic Trunked Radio
From Wikipedia, the free encyclopedia

Logic Trunked Radio (LTR) is a system developed in the late 1970s by the E. F. Johnson Company.

LTR is distinguished from some other common Trunked Radio Systems in that it does not have a dedicated control channel. Each repeater has its own controller and all of these controllers are coordinated together. Even though each controller monitors its own channel, one of the channel controllers is assigned to be a master and all the other controllers report to it.

Typically on LTR systems, each of these controllers periodically sends out a data burst (approximately every 10 seconds on LTR Standard systems) so that the subscriber units know that the system is there. The idle data burst can be turned off if desired by the system operator. Some systems will broadcast idle data bursts only on channels used as home channels and not on those used for "overflow" conversations. To a listener, the idle data burst will sound like a short blip of static like someone keyed up and unkeyed a radio within about 1/2 second. This data burst is not sent at the same time by all the channels but happen randomly throughout all the system channels.

An article on LTR from Monitoring Times:

http://www.signalharbor.com/ttt/00may/index.html

Using Win96 can be pretty simple: Get a file, open it in Win96, upload it to the scanner.

Or using Win96 can be very powerful: Put the systems (trunking) or frequencies (conventional) where you want them, set lockouts, delays, etc., add or delete talkgroups, etc.

Once you get Win96 and the cable installed and get familiar with Win96, you can look at the pre-installed V-Scanners and see how they're set up, download files and open and study them. Other Pro-96 users can share their files with you (and later, you can share with them).

I'd start out with getting a file somewhere and loading it into your scanner. Then you can listen to it for a while and see what works and what doesn't. Then you can modify things to fit your style better and/or to fix errors. And it's all easy with Win96 (and nearly impossible with the keypad).

12885. File - Monthly Post

Yahoo group: PRO-96 (2008 — 2017)
Date: 2008-08-24 13:20:09 UTC
From: PRO-96@yahoogroups.com
Topic: 160 Message: 12885

This list is for discussion about anything related to Radio Shack's GRE built PRO-96 Digital capable Scanner. This includes Any and all Software for the PRO-96. You can also place your p96 data files for WIN96 software in the files section.

We are the official recognized List by both GRE America, and Radio Shack, And Starrsoft software For the PRO-96..... Several Members are on this list and Our Sister List.

Thanks for your support

Group Contact, subscribe & unsubscribe info:

Post message: PRO-96@yahoogroups.com
Subscribe: PRO-96-subscribe@yahoogroups.com
Unsubscribe: PRO-96-unsubscribe@yahoogroups.com
List owner: PRO-96-owner@yahoogroups.com

Also, Our sister Group RS_GRE-Digital-Scanner@yahoogroups.com is available for People who want to talk about any of the Radio Shack GRE built or planned Digital capable Scanners.

Please enjoy the list....

Thanks

12886. [PRO-96] how do i open the v folders?

Yahoo group: PRO-96 (2008 — 2017)
Date: 2008-08-24 14:49:10 UTC
From: iGlobalOne@aol.com
Topic: 12886 Message: 12886

I want to upload all of the local fire and pd frequencies, including the trunked and moto.

how do i direct the upload to the scanner?
if i want to have two or three folders with portions of my region, and/or say only fire?
how can i do that?
thx
jeff

In a message dated 8/24/2008 4:47:24 A.M. Eastern Daylight Time,
newnethboy@... writes:

Using Win96 can be pretty simple: Get a file, open it in Win96, upload
it to the scanner.

Or using Win96 can be very powerful: Put the systems (trunking) or
frequencies (conventional) where you want them, set lockouts, delays,
etc., add or delete talkgroups, etc.

Once you get Win96 and the cable installed and get familiar with
Win96, you can look at the pre-installed V-Scanners and see how
they're set up, download files and open and study them. Other Pro-96
users can share their files with you (and later, you can share with them).

I'd start out with getting a file somewhere and loading it into your
scanner. Then you can listen to it for a while and see what works and
what doesn't. Then you can modify things to fit your style better
and/or to fix errors. And it's all easy with Win96 (and nearly
impossible with the keypad).

It is the open and closed banks. When a bank is open, you can hear all talk groups that are talking on the tower. When it is closed, you can only hear groups that are saved in your scanner.

Subject: [PRO-96] Display Question

Hello,

When scanning banks I have noticed either a "-" or a "+" sign under the
bank number. Have no idea what this for....

TIA

Matthew

You've downloaded and installed Win96 and have it open? The Help menu
item is way over on the right from the other items. Everything you
need is in there.

Not clear what you're asking.

1. If you're wanting to upload to the scanner a file that you have open in Win96:

With your Win96 file saved, the cable connected to both the computer and the scanner, and the scanner turned on (screen should say CLONE MODE), do Scanner>Upload to Scanner.

2. If you're wanting to move a V-Scanner to working memory:

Page 4 in the PRO-96 Preloaded Data Addendum, and follow the instructions there.

That's really odd. It works fine going from Win96 to Win97, but not the other way around.

I would say it might be a paste bug in Win96. I know there are some bugs with respect to copying the lockout flags the other way around, and copying the TGs, I think.

From: rolf_baehr
Topic: 218 Message: 12895

Jeff,

Good question... I'll be interested to see what others have their scanners set at. I think it's probably as much a choice as to how much "warning" you want the radio to give you before it shuts itself down. I have mine set at 4.05v. I always have an extra set of batteries loaded and ready wherever I go with it, so I don't mind a short notice. I find the warning beeper more annoying myself. That 4.05 setting usually means only 2 or 3 minutes before shutdown.

So, we'll see what others set theirs at.. but that's my 2 cents worth... the higher the number on that lower limit, the more beeping you'll have to endure before it goes dead, but then again, that might be a good thing too.

Rolf

That means that there is nothing programmed into the active memory. Are you trying to load form VFolders on the scanner, or are you using Win96 software??

I'm still a bit confused. Are you using Win96 to program the scanner, or are you trying to program it manually? I'm not 100% sure exactly what you are trying to do. You can email me offline if you want to.
Win96 doesn't have any frequencies in it. You have to program them in. There are a few different ways to get the frequencies into Win96...is that what you're having trouble with?

12904. Re: Display Question

Yahoo group: PRO-96 (2008 — 2017)
Date: 2008-08-25 20:25:33 UTC
From: John P.
Topic: 218 Message: 12904

" + " means that it will scan every trunked talkgroup (or any PL tone conventional frequency) in that bank;
" - " means that only the non-locked-out listed talkgroups will be heard (or only matching PL tone conventional channels) in that bank.

If you've got 300 groups on your trunked frequency, and you only want to hear two of interest, then "-" will help you.

Non-trunked/conventional:
If you've got 4 local police departments using the same frequency, but different PL tones, you can list it as 4 channels, assign the correct name for each department's PL, so you can listen to only which of the 4 departments you want, or can listen to all 4, but will know by the text which department is which by their PL tone, using the '-' closed bank.

Pretty useful feature.

If you have thrashed, trashed, mashed or otherwise done in the original folder(s), they can be found in the files section in this group (I'm pretty sure). If you want them emailed to you that can be done too. Once you have them, you can modify to your hearts content and still restore the original files using Win96.

But having said all that, the folder contents are some years old and may have inaccurate information. Eventually you will likely use the folders to store packages of channels for various places. I use one for home, others for standard road trips I take (Yellowstone, Alaska, etc.) so I can load them on the fly when I transit an area or arrive there.

By using Win96 (which you should be using to save your sanity) you can load the unzipped files directly into the v-folders in your scanner. So let's start with the first question, do you have Win96 (www.Starrsoft.com <http://www.starrsoft.com/> first 30 days free) and a programming cable?

If you do, you will use the command (in Win96) Scanner | Virtual Scanner (with the scanner/cable connected and the COM port set to the proper port). Then click on the v-folder you wish to load and it will ask you what file name you want to load. The rest is straight forward. If you need more help, please ask.

Oh, without Win96, it is a LOT more complicated to get the original file back into the scanner.

And if you have Win96, it adds features to the scanner and is the ONLY way to program a multi-table trunked system.

You can't load selectively from the VFolder list. If you want to load Baltimore for example, and the Baltimore file is in a VFolder with four other systems, you have to load all of them. For now don't worry about the VFolders. I will have a file for you today that you can upload to your scanner.

This is different than the PRO-92, as you could 'lock-out' units without a matching PL if you programmed it for PL, and not just FM. I'll check it out tonight and see if they changed this feature from the PRO-92 to the PRO-96.

If your signal drops that quickly, it is likely one of two things.

1) You are being blasted by a nearby off channel transmitter that is blocking the signal. This happens when you use a high[er] gain antenna than the stock antenna. The fix is to use the stock antenna and also try the ATTenuator feature to reduce the sensitivity on the control channel [only]. (I know, it sounds backwards but reducing the signal can make it better sometimes). Generally speaking, using an outdoor antenna on the GRE scanners is a 'bad' idea, their receivers are really hot and easy to overload. The one exception is when you live in BFE (you don't).

2) You may have a broken wire inside the scanner between the antenna connector and the internal boards. Or a broken connector or cable, amounting to the same problem. If NOTHING is moving when the strength changes, it is likely interference (1 above).

I doubt it is a scanner issue as the failure rate of GRE is pretty low except for operator actions (scanners don't swim well). All the firmware changes would do is to decide HOW the signal is decoded, not how much signal is there. If two scanners are dropping out at the same time, that points to 1 above, UNLESS the transmitter is actually dropping out but with the time involved in resolving this issue, that is unlikely (the techs get right on that).

If you use "CT" you do block out other PL's in the Pro-96.
CT as well as PL detection is standard in most high end scanners.

I have had the same problem, and just now have been told that the scanner is "Deaf", my electroics guy is trying to find a board diagram to work out what the problem would be. I connected my Pro 96 to my outside discone with the 20amp booster and it worked fine but as soon as I connected the original aerial the problem was there. I believw that it has something to do with the charging of the unit either from Mains power outlet or 12v. I will let you know when they are fixed.

12924. Black Goo on Circuit Board

Yahoo group: PRO-96 (2008 — 2017)
Date: 2008-08-29 23:01:24 UTC
From: racerpgt@aol.com
Topic: 12924 Message: 12924

The last few months I have been receiving static-filled digital trunking from a known clear transmitter. Another Pro-96 side by side sounds fine.

I took the back off my scanner and noticed black goo coming from the side and bottom of the metal bracket which covers the BNC leads, etc. Did I blow a capacitor or do others have this goo?

Matt

I've never opened mine (no need to) but I can say it isn't 'normal'. I've seen caps dry out over time (takes MANY years) and I've seen them fail in a spectacular fashion (POW!). I've not seen one release goo, there just isn't much moisture in a cap. Something either failed or got into it. It's time for a visit to the repair shop.

Is it sticky or "pretty solid"? It *might* be a
staking compound used to hold yhings in place.

Unfortunately I sent in my radio to RS and they returned it to me saying it didn't have any problems. I don't know if they ever opened it or not.

As Joe mentioned, the black compound is a normal component of assembly. It prevents access to certain parts for either proprietary or regulatory effect. If it is working properly and you just noticed the goo...there was nothing to repair, so RS's response was appropriate.

12935. Repair Manual for Pro 96

Yahoo group: PRO-96 (2008 — 2017)
Date: 2008-09-04 01:35:16 UTC
From: monteleoneb
Topic: 12935 Message: 12935

Hi, has anyone got available or would someone be kind enough to source a Repair manual for the Pro 96. Radioshack don't send to Australia. I am happy to pay all costs.

Thanks

12936. Help with San Diego County and other SoCal Frequencies

Yahoo group: PRO-96 (2008 — 2017)
Date: 2008-09-05 00:33:31 UTC
From: 1st Investigative Group
Topic: 12936 Message: 12936

Im reaching out to those in the know who may possibly be able to assist and or "jump start" my radio.

In late August 2008, my wife purchased a used Radio Shack PRO 96 Digital Trunking Handheld Scanner, Model # 20-526 (for $25.00, w/o instructions or manual) at a local garage sale and now I want to program all of the important local San Diego, Orange, Riverside, Imperial and Los Angeles County frequencies.

Does anyone have a suggestion or a source for a quick " Jump Start"?

Regards,

Santos "Sal" Garcia,

The manual is available as a PDF file and can be downloaded at radioshack.com.
For the frequencies, go to www.radioreference.com

12938. Re: Weather or not?

Yahoo group: PRO-96 (2008 — 2017)
Date: 2008-09-05 15:14:03 UTC
From: newnethboy
Topic: 12742 Message: 12938

Wow, has it really been two months that it took me to get around to this?!

Thanks, Rick, for your help.

About three or four weeks ago I programmed my Pro-96, per your directions, to have the weather alert as the priority channel. The following two Wednesdays, it sounded off for the weekly test. (One of those times I was in a doctor's waiting room--good thing I had the earpiece on!) This past Wednesday I noticed (when my Midland WR-300 caught the alert) that the Pro-96 missed this time. This morning (Sep 5, 0750), the scanner sounded off two or three times, and the audio was a tone, repeated, and some 2*2 tone sets (or maybe just tone pairs), but no audio alert; the Midland had no reaction. (Both are on the same, closest/strongest station and are set to receive LA County alerts.)

So apparently the Pro-96 does the weather alerts differently than the Midland. Generally, the Pro-96 works in alert/priority mode, so that's good. (I suspect that the tone/signal it needed for the Wednesday weekly test was transmitted between priority channel checks, or something like that--the two radios were side-by-side and the transmitter signal is pretty strong.)

Anyway, thanks for your help; wanted to let you and others that that part of the weather setup works. Still haven't gotten around to the other part (monitoring weather alert when I'm not scanning).

The Manual is in Files of this group as is a programming cheat sheet in word format. Also, some San Diego smart net may need to be set as splinter. Program using PGM>TRUNK>FUNC+3 and press UP to Splinter then ENT.

Once you download the manuals (2: the manual and the V-Scanner suplement), if you have a Windows computer and Internet, go to http://www.starrsoft.com/software/Win96/ and download Win96 (assuming the software/hardware requirements are met by your computer), and then go to RadioShack and buy the cable, part number 20-047. Install both the software and the cable exactly according to the directions.

You can then program manually into Win96 and upload it to the scanner, or you can pay for a premium account at radioreference.com and download systems directly into Win96.

Way easier and way better than punching buttons on the scanner.

Santos,
You can find a manual on the p-96 on the radioshack website in pdf format.
just a quick thought tho' if you only had to pay $25 for that unit you got it D...m cheap or it is as hot as the Arizonia sun in the summer time! I have purchased two in the last 4 years and one was stolen fron my vehicle in 2006/7. as for the frequencies there are lots of sites on the internet with them some could be a little outdated so you will have to look around.
I use starsoft and a cable to program my unit which makes it a heck of a lot easier..

Guys/Gals,

I owe you all an apology for not being around this past month. On August 8, 2008 my oldest son passed away unexpectedly. For that reason I have in most cases, ignored the scanner groups as well as pending items. I will be in and out (more out) over the next several weeks as we are trying to find something to call a normal life. There is no training in the world that will prepare you to work on one of your own kids, absolutely none. There is still alot to be finalized around here and therefore I will apologize now for the next few weeks. I have taken a month off work and trying to ease back into life one day at a time. I appreciate your understanding.

Dave and family,

You all have my sincerest condolences for your loss. While the sense of loss will never go away, the pain will diminish over time. That amount of time varies and is an intensely personal occurrence that no one has the right to tell you how much time you need. You have no need to apologize to anyone and please take ALL the time that you need. You are in our prayers.

To quote Thomas Jefferson (I think), I condole with you.

There is still alot to be finalized around here and therefore I will apologize now for the next few weeks. I have taken a month off work and trying to ease back into life one day at a time. I appreciate your understanding.

No need for apologies Dave. I myself had to deliver my stillborn son a number of years ago. As you said nothing can prepare you for a loss of one of your children. Our prayers are with you and your family.

Joe, what is the replacement model for the 2096? I guess this explains why RS has dropped the price on the 2096 & the 96 to $379. Thanks, Gil

Yes. The portable is the PRO-106. No mobile model number yet. The 106

will be essentially the same as the PSR-500.

Gil,

At this point no one really know's accept I guess GRE. The 106 is the only one so far to be type accepted by the FCC. I can only assume that it will be a repackaged PSR-600 with the Radio Shack name on it. So far no type acceptance info as been found on it yet.

According to some posts in the Radioreference.com forums the base/mobile version should be called the Pro-107 and basically be a Radio Shack branded PSR-600.

12962. Thanks for assistance with San Diego frequencies.

Yahoo group: PRO-96 (2008 — 2017)
Date: 2008-09-10 16:11:31 UTC
From: 1st Investigative Group
Topic: 12962 Message: 12962

Thanks to all who responded and provided suggestions to my post for assistance in programming my used /new PRO 96 with San Diego County frequencies. I appreciate your suggestions.

There was a comment regarding cost of $25 for this radio and that it may have been "hotter than the Arizona sun". It turns out that this radio was legally purchased by the late sellers husband who was a long haul truck driver and died in a traffic accident in late December 2006, in Tennessee.

Tennessee State Troopers kept the radio and other personal property for safe keeping and released her deceased husbands property to her in January 2007. Sad story.

Thanks again for your assistance.

I can't speak for bsugarberg, but I would have suspected this post simply because it seems totally unrelated to the stated subject of the group, because it has the tone of a "pitch" (language such as "we must have", "we don't have to spend", which bear the same tone as many ad pitches and spam pitches), and because it lacks specifics, has only a link to go who-knows-where to get infected with who-knows-what).

Ok disregard my previous post then. I thought he was referring to another post that I made on the 106 group earlier today. But now I see he was questioning Joe M on his earlier post about this invitation. Again sorry for the confusion.

I can't speak for bsugarberg, but I would have suspected this post simply because it seems totally unrelated to the stated subject of the group, because it has the tone of a "pitch" (language such as "we must have", "we don't have to spend", which bear the same tone as many ad pitches and spam pitches), and because it lacks specifics, has only a link to go who-knows-where to get infected with who-knows-what).

It was my interpretation that bsugarberg was indeed referring to the post on the 106 group, "A list of Software that we must have on our computer". That's the post I am giving feedback on in my post to which you have replied here.

Are we all now totally confused? Again, I believe bsugarberg was speaking of the "list of software" post on the 106 group, and I know I was speaking of the "list of software" post on the 106 group.

Topic: 160 Message: 12986

This list is for discussion about anything related to Radio Shack's GRE built PRO-96 Digital capable Scanner. This includes Any and all Software for the PRO-96. You can also place your p96 data files for WIN96 software in the files section.

We are the official recognized List by both GRE America, and Radio Shack, And Starrsoft software For the PRO-96..... Several Members are on this list and Our Sister List.

Thanks for your support

If the frequency is P25 conventional leave Mode as FM as the scanner will decode digital.

If the system is P25 trunk then program as Motorola, however, you will need to set P25 trunking tables.

You can search the internet for Scanner Laws and you will find a few sites (some more up to date than others). Here's one I like:

http://www.afn.org/~afn09444/scanlaws/scanner5.html

You can also look in your state's Statutes to see if it is addressed. I know that in Florida it's easy to look up, but I don't know about your state.

By the way, now that Morse Code is no longer required, it's easier than ever to get your ham license, and there are several online sites that have practice exams (QRZ is one of them).

Good luck and happy scanning.

Just go to the files area of the group. Locate what file you want to download and just click on it and save it to your computer. Then go to where you saved the file click on it and Win96 should open the file.

Just program the frequency as FM and it will decode fine.

The PRO-96 does not support any selective call for P25 (called a NAC).
You didn't give one, but I wanted to offer this fact. You will hear
anything that transmits on that frequency.

> free offer like WIN96.

I looked at the Butel page for ARC96. I've never used that software, so I certainly cannot speak to its technical capabilites, but...

<rant>

0. Brand new software for a discontinued scanner, 5 years after the scanner was released and about a year after the scanner ended production.

1. "cheapest software for the PRO96/PRO2096 series"

Can't argue that. It's the cheapest... by a nickel.

2. "ARC96 is the first software for the RADIOSHACK PRO-96/PRO-2096 that fully supports rebanding"

Only if "fully supports rebanding" means "lets you knock selected frequencies down by <x> MHz"... something that really has nothing to do with actual "rebanding" as it's important to us scanner users in the USA.

Perhaps ARC96 really does handle rebanded Motorola systems in a user-friendly manner (i.e. via a simple selection of "Rebanded" for the trunked system), but the web page doesn't indicate this.

3. "Are you upgrading from WIN96? Send us your WIN96 license information and receive 25% discount on your ARC96 purchase!"

It's mildly annoying that another software vendor would try to use my software's name in the promotion of his own. At least the Google Ad that, over this past weekend, said "PRO-2096 star software" seems to be gone.

Beware: if you take advantage of that offer, you are now allowing a 3rd party to run Win96 on your license, and you have no control over how that 3rd party uses your license information. If your "WIN96 license information" appears on the 'net somehow, who will look like the "key-sharing pirate" when that fact is advertised? Keep in mind that registration keys for Win96 contain your name, email address, and postal address.

4. "Supports extended frequency range"

Gee, I wonder where that came from. As far as I'm aware (and I'm in a pretty good position to know what the GRE docs say, though I suppose it's conceivable that the docs have changed since I wrote^H^H^H^H^Hlast saw them), GRE does not publish information on how to enable that feature - the only way to "figure it out" is to look at a Win96-programmed radio's data.

"Are you upgrading from WIN96?"

Seems to me it would be a
DOWNGRADE, given the large base of Win96 files that are widely
available
plus Mr. Starr's undisputed expertise with the GRE products. Also, I
had little choice where my dollars went when I purchased my scanner
but with the software I will support a software author that lives and
pays taxes in the US.

13000. software marketing tactics - the low road

Topic: 12997 Message: 13000

Don,

Par for the course and why I prefer to not purchase from a certain vendor anymore. I waited for YEARS for major bug fixes, and even today I don't know if they are fixed or not. I started using another vendor's product and haven't looked back. I find certain products are the most user unfriendly SW ever made for a scanner. I hate having to click in a field to change data only to have to change it somewhere else on the screen.

On the other hand, I had at least three distinct features of Win500 I asked for (basically new functionality, albeit minor) and they were added WITHIN HOURS - POSSIBLY WITHIN MINUTES! Now, that is how customer service should be! (specifically, the features added in versions 1.63 and 1.64 - notice that both versions were released within 24 hours of each other)

My only decision was between Win500 and PSREdit. I didn't even consider anything else for the above reasons. I feel both of these programs are fine work, and I know you, Don, and Mike both make excellent products with great support, and promote same without the need to smear anyone else's products. Anyone who wants to take on both of you is crazy.

BTW, I ended up deciding on Win500 because I liked the user interface *very slightly* better and due to the Win96/97 compatibility. The fact that I've always been very happy with Win96/97 was another factor. I think it's safe to say that nobody knows the GRE scanners like Don Starr. I'm sure I would have been just as happy with PSREdit as I am with PRO96Com. Again, the support is there.

Send us your key? Sounds fishy to me. When you do that, you essentially sold all rights to use Win96 and will be 'stuck' with their product (unless you want to use a product illegally or purchase a replacement Win96 key).

I like the concept of the "cheapest" SW. By a nickel, AND in stark contrast to the company's other products which are usually the most expensive in the field.

Smearing the competition is nothing new to certain vendors. I thought that had stopped a couple years ago and the high road was taken, but apparently it has not or was abandoned. It's odd that a certain phrase was used to criticize SW packages that cost less than his. What does that tell you about his "lowest price" SW? You can't have it both ways. Either price is important or quality is. Personally, I've seen better quality AND lower prices (like FREE) in SW for Uniden's products.

I note that ScanControl made an announcement of PSR-500/600 support, but they did it touting their strengths rather than criticizing others - taking a page from the "modern politician's handbook".

Personally, I think they are looking for "new fishing grounds" with GRE/RS due to decreased sales in other markets. I wouldn't want to jump aboard a sinking ship.

Joe M.

Make sure that Vista isn't asking for permission, I know, I have Vista and it is known for that, but I didn't have any problem installing it on Vista Home.

Just to be safe, download the latest version.

Notwithstanding all the bashing Don has received because people lost their license codes and thought he should bail them out for their lack of responsibility (I'm trying to not make it obvious where I stand on that issue), he, unlike most software vendors, gives the updates free.

Mine too but I am guessing there is a point when the plug is inserted it breaks the connection from the battery before is senses the power from wal-wart. Two ways around it is to plug in the power supply before you turn on your scanner or turn it off then back on; either way works I just can't tell you why they designed it that way.

Power should be 300ma and either a C or B tip.

Subject 1:
The Pro-96 is not like my old Pro-23; when I powered on the Pro-23, it would just go on. Not the Pro-96; it BOOTS! Here's how that answers your question: If you interupt the power to a computer, it only takes less than milliseconds for the thing to crash; that's what happens to the Pro-96, which is a computer. You just can't consistently plug/unplug the AC adapter fast enough to keep power to the computer.

I made mention of this in a post on 7 Dec 2007; it would help you to go to the archives and read that thread. Key point in a reply: Do you REALLY want to hit your $500-worth-of-sensitive-computer with voltage changes?

Bottom line: Never have your Pro-96 (or any other sensitive electronic equipment) powered on when you plug or unplug power.

Subject 2:
According to the manual, p. 27, you need an AC adapter/power supply which provides 9V and a minimum of 300mA through a size C "Adaptaplug" and the tip positive. You said you're using a 200mA source; you need a little more oomph (pardon the technical terminology), lest you stress the electronics.

Could be you have the wrong tip... could be a bad transformer.
If you have a volt ohm meter test the voltage and that will eliminate the possibility of a bad transformer.
As for the right tip you should be using the universal (B) tip (Yellow).

I also use the B tip because the C tip causes the power to go on and off to my radio when I move the radio around on the desk. The C tip just doesn't fit snugly enough. I heard long ago that it's a misprint in the manuals, and (in my case) it applies to my Pro-95, Pro-97, and Pro-96.

I think the C tip would be okay if you are leaving your radio totally still and not picking it up or moving it around. I don't know why this hasn't been corrected in the manuals. I took my C tip back to Radio Shack years ago and they gladly replaced it for the B at no cost. And that solved my problem of losing power to the radio.

13016. Re: PRO-96 AC Power

Yahoo group: PRO-96 (2008 — 2017)
Date: 2008-09-27 17:27:35 UTC
From: newnethboy
Topic: 13004 Message: 13016

The "C" tip is the correct tip.

The barrel of the tip presses a switch which disconnects the battery power from the radio itself, so that the adapter power goes directly to the radio instead (it also goes to a battery-charging circuit). A smaller diameter barrel than the specified one could cause a less dependable activation of that switch. A larger barrel will not physically fit into the jack.

At the same time, the center of the tip makes contact with a pin centered in the jack, and connects one pole of the power (the barrel, in contact with the springy contact at the periphery, makes contact on the other pole). If the diameter of the center is too small, the tip won't fit into the jack; if it's too big, it will give a loose fit. If the diameter of the barrel is too small, the pressure of the spring is too weak and contact between the center and the pin is undependable, as is the contact between the barrel and the spring contact.

I can't explain why kayi4cle has had the experience of the B tip working better than the C, unless it was a connection problem elsewhere that was cured by accident while changing the tip or the tip had a problem. (It could also be a problem within the jack, with that springy contact and/or switch. It could also have been a defective tip.)

I can say from experience with this type of power connector, that moving it could very easily cause very brief breaks in power. I have that same problem with my headset adapter to my phone, where if I move the plug I get static. And with the computer we call the Pro-96, the briefest breaks in power can create havoc.

BTW, the RS salesperson gave me "B" tips when I bought the radio and adapter; if I have to choose which is right, a RS manual or a RS salesperson, I'll trust the manual slightly, the salesperson not at all. (They exchanged the tip I hadn't opened; I didn't ask them to exchange the second one.)

And as far as Mark's point on unstable power:
A: Always have a surge protector on any electronic device.
B: Always turn your radio off before connecting or disconnecting the adapter.
C: Even if you do have $500 lying around waiting to be spent, do you really want to use it to buy something you already had, or to buy something additional?

Have you tried hitting func-lock? (same key as the backlight on & off button)

it toggles back and forth from locked and unlocked mode

also, think there is a thread someplace where it is all locked out if you have nothing programmed,

A 15 pin plug into the Logic Board jack may need to be checked.
Remove the back and look above reset near power plug. Using a
standard flat head screwdriver with flat part against side of scanner
front and the tip against the white plug, gently rotate driver until
the plug lifts away. Then press it back to re-plug. Reconnect
power for test. If it works, unplug power and re-assemble back of
scanner.

If it doesn't work, the problem is likely in CPU or circuits to this
jack on Logic Board.

Frank

From: dahupmich
Topic: 13029 Message: 13029

I just purchased a new Pro-96 but when I tied to load in the V-Scanner Folder #8 data, it wasn't there. I went through and checked and all other V-Scanner folders and each has the appropriate data. Some one may of deleted the data while experiment at the store.

I found the default V-Scanner data (folders 0-9) online and down loaded same. I see the file has a p96 file extension.

So now I need a software program to work with the Pro-96. Any suggestions, on a free program, or the cost of a decent one on the market? I see Win96 out there but is this what I want? Need your input.

I've been in search mode and saving some of the frequencies I'm looking for but this isn't the answer.

13033. Win96 Recommendation !

Date: 2008-10-11 23:07:02 UTC
From: dahupmich
Topic: 13033 Message: 13033

I down loaded Win96 and am in the "trial period" yet but it sure worked for me already. As a test I loaded in the V-Scanner folder #8 that wasn't in my Pro-96. Worked just fine. Looks like this program can do quite a bit, so I'd better get to reading the help file. This is a definite purchase for me. Thanks again for those that suggested the program.

Greg

Exactly. I didn't weigh in earlier because it seemed like you were getting the answers you needed, but I'd have told you three things:

1. The Pro-96/Pro-2096 are good scanners. (Support from Radio Shack is pretty poor though.)

2. You can't have one of these scanners without having Win96 and the RS cable. You just can't. Way too valuable. Besides making programming easy instead of clumsy, you can do things through Win96 that can't be done at all elsewise. Like loading files from others, like downloading from RadioReference.com (requires premium membership, WELL worthwhile), like customizing the welcome display.

3. You made an extremely good move joining this group. I joined a year ago not only knowing nothing, not suspecting much, and they made me nearly an expert.

Welcome to the Pro-96 group and the Pro-96 world!

Ditto.

And you can load directly into the V folders using Win 96. You can now program multiple tables for the systems that require it (can't do that from the keypad, DOH!) and can scan more frequency ranges, set your battery level warning beeps and a few other neat things.

Oh yeah, it programs the radio too :-)

13036. PRO-96 Voltage Regulator

Yahoo group: PRO-96 (2008 — 2017)
Date: 2008-10-13 19:41:26 UTC
From: dahupmich
Topic: 13036 Message: 13036

Does anyone know what internal voltage regulator is installed in the PRO-96? The reason I ask is that I have several wal-wart 12v. DC output units. I know most of these units would have around 18-20v. DC out without a load. I'm only guessing the suggested 9v. DC units would have around 12-13v DC out without any load.

Any thoughts?

I'm using 2700mAh Ni-MH (Nickel-Metal Hydride) batteries. They last 10+ hours per charge.

Make sure you use the YELLOW battery case, that allows the power supply of the PRO-96 to charge the batteries.

I use rechargables too. on the down side they don't last as long but while you are at the house use a recharge charger.
Unless you have a mint, use rechargeables they are about $10 for 4 and if I were you I'd buy a charger seperate of the radio and two sets of rechargeables one for backup they won't continue to take a charge forever but they will last longer than two days.
I remember the first digital radio I owned a Pro-95 I purchased the salesman told me I couldn't charge rechargables in my radio the manual said I could..
I opted to use the manual's advice and did it anyway I left them on charge for about 16 hours when I picked up my radio it was sopping wet I was thinking what the ..... the batteries didn't explode but had leaked all over the battery compartment and had eat the black part of the lower portion of my board!
I still use rechargables but with great care.

I have used Alkaline AA cells and they lasted longer than 2 days. But then that depends on a persons usage and how busy an area is when scanning. My usage is about a few hours a day then I turn it off. If you are listening to your scanner around the clock in a big city area, then it may be normal for your batteries to only last a couple days. I use rechargeable batteries. I have two sets. While one set is in use the other is charged up and ready to go. When the set in use discharges, I just swap battery holders. You may want to do what I'm doing. It will be a big savings in battery cost and you will always have charged batteries. Get an external charger that will charge 4 AA batteries an eight new AA Ni-MH batteries from Radio Shack. You will be set to go.

Carleton

I am currently using the RadioShack Rechargeable Nickel-Metal Hydride Batteries and I primarily scan only bank at a time, most of the time and on that bank I have about 35 channels programmed in. With this configuration I can scan about 10- 12 hours straight through without recharging the batteries. As for the recharger, I seldom charge the batteries in the unit I have been using RadioShack Cat No: 23-1304 4-6 Hour Battery Charger. The combination seems to work great together for me at lease. With all the fires in my area this past week here in socal the pro 96 has been getting a workout and has performed very well.

I'm using Duracell 2650mAh AA batteries with the 15 minute charger. I purchased the kit with the charger and 4 batteries for about $39 at Staples along with a couple extra 4 packs priced around $12. I'm using them for several devices including a digital camera and 3 scanners. The 15 minute charger has worked great with a very good cooling fan. It runs much cooler than other models and uses half the voltage of the previous Rayovac model I had. It runs fine off of an inverter in the car. I've been using them for close to a year without any problems or need to replace the batteries. With the extra set or two I don't have any real down time and don't bother with any adapters for the scanners. Run time varies but is consistent with other comments here around 8-10 hours depending on usage.

They've been a good investment for my needs.

Don't use NiMH they run to hot while charging, use good old NICADS. So you get 10 more minutes is it worth the heat generated ?? Charge them in the radio or the little door will break off or the battery contacts will loose strength after a while by moving the cells in and out constantly.

Mine in the car runs off the regulated lighter plug for years and no problem. Keep it simple.

From: dahupmich
Topic: 13058 Message: 13058

Is there a good tutorial out there for understanding and then entering info into the "Channel" page in regards to MOT systems? I have printed out the help files for Win96. Up here in Northern Michigan at times I hear a police or fire unit request going to a different channel, or they might say something like "lets go to 52 comm" or we'll use "52 comm" for a particular even etc. If I enter the correct info in the trunk info area might this help? I have tables for different talkgroups withs DEC and HEX info but don't really know how and where to properly enter this info.

I've looked in vain for such an item. I've also failed to find a basic tutorial on trunking radio. So having learned all this the hard way, I wrote a introduction to trunking, put it up on my local scanner group for comments, heard nothing and did nothing. Time to get with it again. So for you, dahupmich, happy reading; and for others here (esp. those who actually understand this stuff), please read and comment:

==========
I'm going to try a new summary explanation here, freely plagiarizing from n6en and possibly others.

----------This is a drill exercise only.----------
I will not guarantee that anything I say here is accurate. I'm posting precisely because I'm not an expert but I'm trying to understand, and there's no simple, clear explanation online anywhere that I've found. If you're a novice like me, DO NOT believe what you read here. If you're an expert, please correct me freely (but with facts and correct explanations, please). If you're correcting and it's convenient for you to copy this into a word processor (I have MSWord, WordPerfect, or WordPro) and use the show revisions mode, you can attach the corrected file to an offlist email; otherwise, please reply onlist so we can all benefit. I plan to post the finished explanation document where we can get to it, so if you edit or correct or otherwise contribute, make sure to give me the "handle" you want included in the final document.

----------This is a drill exercise only.----------

How Motorola trunking works and how to program your radio

In a conventional radio system, a frequency or a pair of frequencies are assigned to a particular use (say a fire department main dispatch channel), and they sit unused unless the assigned user is active. In a trunked radio system, a bank of frequencies are assigned to a group of users (say, all departments in a city or even a group of cities). These frequencies are assigned as needed, which tends to maximize their use. For instance, there may be a time when various city departments, say sanitation, water, parks, are using the radio heavily, and other times when these departments are quiet but the fire and police departments are active. In a trunking system, the same frequencies can be used by all these users.

In order for a trunking system to work this "magic", a computer assigns voice* frequencies as they are requested by a voice radio. We'll look here at a Motorola system. There is also the EDACS system, which we will not discuss here.

In a Motorola system, the computer transmits control signals over a control frequency (Control Channel, or CC) which continually transmits and tells voice radios what frequency has been assigned for a particular voice communication. The voice frequency is chosen from a bank of available frequencies, and the CC identifies a frequency by its assigned identifier number according to the "band plan". The voice radio must know the band plan, which consists of a base frequency, the frequency spacing, and an offset value. (In the band plan, the bank of frequencies and the system's way of referencing them becomes the trunking "table".)

To program your radio for a certain site (transmitter tower--either the system tower or one tower of a system), you need to enter the frequencies for the control channel (primary or primaries, and alternates), and also the base, spacing, and offset. You can usually find these values on www.radioreference.com, or a Website which focuses on your area, or you might know someone who knows them, or you might find an interest group of scanner enthusiasts for your area. (Nearly everything I'm telling you here was learned from people in the SoCalScan and PRO-96 Yahoo! Groups, several of whom actually work with these systems for a living.)

I'll be using the ICIS (Interagency Communications Interoperability) Radio System from Los Angeles County, California for illustration, since this system was what provoked me to learn all this stuff. That system has, presently, eight sites in a SmartZone configuration (see [Jim Walls citation]).

If I wish to program the Montebello site, I need to enter into the radio the eight frequencies listed in RadioReference. Then I need to enter the base of 480.50000, the spacing of 12.5, and the offset of 380. Once I've done that, I should be able to receive voice transmissions repeating from the Montebello site, and I should see a readout (depending upon the radio's features) of either the actual voice frequency in use or of the channel number. If I'm that interested, I can do some math to calculate the frequency from the channel number or the channel number from the frequency.

Everything starts with the base frequency (which is why it's the base [duh]). Looking at this math from the point of view of a known channel number, it goes like this: When the "channel number" is equal to the "offset", it specifies the "base" frequency is to be used. Each additional channel is higher by the "spacing", and the receiver computes the actual frequency desired by computing with the formula {Frequency = Base + (Channel - Offset) x Spacing}. The channel number derives from the control channel data, and base, offset, and spacing I have set in my radio.

When using that formula, remember that base frequency is usually in Megahertz (MHz), and the spacing in Kilohertz (kHz). For instance, 12.5 kHz = 0.0125 MHz. The channel numbers are limited in size due to the design of the system. With a spacing value of 12.5 kHz (the

spacing in ICIS; also could be 25.0 kHz or 50 kHz) the available channel numbers will only span a theoretical range of 4.75 MHz. However, in practice, the allotment of frequencies can be a much smaller range. It is possible, depending upon the radio's features, to program a Channel Lo and a Channel Hi to limit the radio to the range of actual assigned frequencies. (This is necessary in multi-table systems. See below.)

If my radio shows the actual voice frequency in use, I can use the formula given above to reverse-calculate and find the channel number. For instance, if the frequency is 480.50000 MHz, without calculating I know that's channel 380 (the actual base frequency). If the frequency is 480.52500 MHz, that's 0.02500 MHz higher than the base, or two steps (because the spacing is 12.5 kHz, or 0.0125 MHz), so we know the CC told the radio to look on channel 382 (offset plus difference). If our display tells us the voice is on channel 382, we can apply the formula to find that the actual voice frequency is 480.52500 MHz.

But then it gets a little complicated, because some sites have multiple tables.

The ICIS system Glendale site is a good example: This site has frequencies in the 482 to 484 MHz range and also frequencies in the 470 MHz range. Because the system is limited to a span of 4.75 MHz, a single base/spacing cannot produce the required frequencies. The solution is that two frequency "ranges" are needed, one for the 470 MHz channels and another for the 482-484 MHz channels. So there are two tables, two ranges, for Glendale:
Range 1: Base 470.0125, Spacing 12.5, Offset 380
Range 2: Base 482.0000, Spacing 12.5, Offset 500

To receive this site, I enter the 14 frequencies and then use a multi-table entry to program Ranges 1 and 2 as above. However, the radio also has to know that the channel numbers apply to different ranges, so it's necessary to add Channel Lo and Channel Hi values. For the Glendale site, the values for the base of 470.01250 MHz start at the offset of 380 and end at 499, just short of the offset of the 482.00000 MHz range. The result is that when the CC tells the radio to go to a certain channel, it knows whether to calculate from the 470.01250 MHz base or from the 482.00000 MHz base.

(If the radio were not restricted as in this example, an assignment to, say, channel 501 could be interpreted as 471.52500 MHz [121 steps from the 470.01250 MHz base] or 482.01250 MHz [one step from the 482.00000 MHz base], and the radio wouldn't know what to do.)

So now that we thoroughly understand all that [uh-huh], we can now move to programming the radio. (Note: You are well advised to get and use a computer program, with a connecting cable, to program your scanner. The scanners that can handle trunking are complicated, and programming from the keypad is just too much like work.)

The first step, besides emptying a bank if you need to, is to enter the site frequencies. Go to the table for your system and enter all the frequencies. Most people start entering in line 1--in EDACS you MUST leave line zero out of the entry because the LCNs need to be in the same line number as their place in the system.

Once all your frequencies are entered, go to the table settings and enter the base, spacing, and offset values. Also set Lo and Hi if applicable, and also select the right kind of table.

That pretty much should have you scanning, unless you have a multi-table system. In that case, you will also need to click Multi table and enter the table for each bank, along with Channel Lo and Channel Hi.

Okay, that should give you the radio system. But one step remains: You need to enter talkgroups. Going again to your source of system data, choose the talkgroups (TGs) you want to hear, and enter them in the TG table, setting them according to your preferences for delay, lock-out, etc.

An alternative to setting TGs is to set the bank for "open", which means you'll hear all TGs. You can then make note of which you wish to monitor, and program them into your scanner.

Once you've done all this, reboot the scanner and you should be hearing the trunked system. Happy scanning!

---
* What I'm calling "voice radios" are the radios which are being used to transmit and receive communications pertinent to the user's activity, as opposed to the radio control transmissions. They actually may carry voice or data, but I've applied the term here to clarify easily whether I'm referring to the control or the user's radio.

13060. USB to Serial cables

Yahoo group: PRO-96 (2008 — 2017)

From: Kevin Halucha
Topic: 13060 Message: 13060

I have recently upgraded to a new computer and it does not have any serial cable outputs on it. So I need to get a USB to Serial adapter. I have seen 20-289 listed in previous post (rat shack) but when doing a search for that part number it comes back as unknown.

Does any USB adapter work these days or is there still problems. The only reason that I want this instead of buying the USB programing cable is I have an older GPS that uses Serial to program it. So, I should be able to use the one cable for both purposes.

Thanks,
Kevin

Yeah, I also NEED serial ports still (I'm using 2, and that's without my scanner). Had to add a card to my current computer.

For the scanner (Win96-to-Pro-96), you're best off with the RS 20-047 cable. However, you're mentioning another problem, your GPS. Your best bet there, I think, is to get a USB-to-serial adapter. This is a computer thing, not a scanner thing; go to your favorite computer place.

I looked this up on NewEgg, and they have MANY of these, ranging from a simple USB-to-serial short cable for about $8 to a whole lot more. You can get one serial port, two serial ports, or a serial plus a parallel.

I recently purchased a new set of 2500mAh Eveready Energizers. These are, by far the best rechargeables I have owned. However, I have noticed that the battery door fits much tighter than with other rechargeables, espcially when the batteries are still warm from recharging. I expect that this will eventually cause the door to break. One or more of the batteries obviously has a greater diameter than other brands, but placing them end to end with other brands does not reveal a visible difference.

I've been using the Radio Shack version of the 15-minute "I-C3" rechargeables in mine since August 2005. They were made by Ray-O-Vac, who has since discontinued them "due to lack of sales." They're rated at 2000 mAh and will last me 8-12 hours depending on the usual variables. I paid about the same price as you did, Greg, and of the 12 batteries I bought at the time, only one has died on me.

I use the 15-min charger maybe half the time (especially if I'm traveling), otherwise I use a generic AA charger and it takes the generic amount of time to recharge them. I had feared the heat problem when doing the 15-min deal, but as I say, I've lost only one of the twelve batteries in three years. BTW, my kid uses them in his Xbox controller and he tells me he gets about 20-30 hours of use per charge, and always uses the 15-min charger.

From: gbainer06
Topic: 13065 Message: 13065

Hi all,

I have a quick question regarding charging batteries in the Pro-96 and using the power supply for operating the scanner.

I have been using the scanner for quite a while by charging the batteries, and then using the scanner while not connected to the Radio Shack 9 volt, 300mah charger/power supply.

I just recently discovered that the power supply will run the scanner just fine, with no batteries installed. For some reason, I was under the impression that it wouldn't work this way.

My question is this...does the scanner have an internal charging circuit that will keep the batteries charged if I just keep the power supply connected to it all the time? Or is the charger only supposed to be used for a certain amount of time, since the batteries seem to get somewhat warm after charging overnight?

I guess what I am getting at, is can I leave the batteries in the scanner, and leave it hooked to the power supply indefinately without damage to the batteries or scanner? This would be much more convienient, as I was considering a Pro-2096 to avoid having to constantly worry about the batteries.

BTW, the batteries in question are 2000mah Nickel Metal Hydride AA batteries, in the yellow holder, of course.

Thanks for your advice in advance!

Glenn

I never take the batteries out of my scanner. I sometimes leave it on the charger for 2 or 3 days at a time. When I take it off the charger, I can usually run it for 10 to 12 hours before it starts dying off. I am using Energizer Rechargeable 2450 mAh batteries and have never had a problem.

HAVE A GREAT FIRE FREE DAY

I also leave my batts in always, I have left mine on charger for days operating without problems. Been doing this for 2 years on same set of batts,
So I guess they should fail any day now.
Mine are the 2700 mah, and I can commonly get 10-12 hrs, I even leave the light on during that time, which barely makes a dent in the run time.
It took me a while of testing, but I have the voltage alarm set to warn me when I have about 1/2 hr left of monitoring, before it shust down.
One thing that love about the 96 is the weather alarm, I set the SAME for the two counties west of me, as well as my county. When I first ran it, I didn't know that the text display of what the event was would show up, way cool.

13073. Power Adapter

Yahoo group: PRO-96 (2008 — 2017)
Date: 2008-10-19 20:43:28 UTC
From: Chris Gaines
Topic: 13073 Message: 13073

I am having trouble finding a power adapter for my Pro-96. Radio Shack says the adapter specified for it does not work. Nayone have a part # for thier adapter and where they got it. Need Car adapter.

Thanks,

Chris E. Gaines

13075. Re: Pro-96 Battery/charger question

Yahoo group: PRO-96 (2008 — 2017)
Date: 2008-10-19 15:47:48 UTC
From: thaiscanla
Topic: 13065 Message: 13075

I prefer to use an external charger and have at least three sets of rechargeable batteries. Each of my scanners gave at least two battery holders and the rechargeable batteries I buy usually come with a charger.

I recall seeing messages from other users that had the battery holders melt in their scanners because they used the scanner to charge (overcharge?) the batteries. So I didn't want to take a chance on that happening. I always try to depleat the batteries completely before fully recharging them. I've had my current sets of batteries for close to four years (both Energizers and a "cheapo" brand from Fry's Electronics). I like the Energizers more because they seem to have more power - enough to run my Canon digital camera for days whereas the "cheapo" brand cannot power the camera for long.

My two cents.

273-1863 9 volt car cord
Use the "B" tip.

Mine has been running about 3 years on my 96. Never had any problems at all.

13079. Re: [PRO-96] Power Adapter

Yahoo group: PRO-96 (2008 — 2017)

From: Carleton Reed
Topic: 13073 Message: 13079

I bought my Pro-96 about 4 years ago. I also purchased the recommended charger with adapter tips. When I tried to charge my 96 through the radio, it wouldn't work. In fact, the scanner would not even function (power up), as long as the adapter was plugged in, with or without power. I tried different adapters and none of them worked. And yes, I was using the yellow holder.

So I purchased two sets of rechargeable and an external charger. While one set was in use, the other was charged and ready to go when the other discharged.

I saw a post on here the other day that the door would not slide close because the AA recharge cells were different in diameters. Since owning my 96, I've used different brands AA cells in both holders and never had that problem. I also take extra care when closing the sliding battery holder door, not forcing it.

Carleton, AA6GZ

From: newnethboy
Topic: 13065 Message: 13083

I have been successfully recharging in-scanner, but I'm using NiCads (RS high-cap). I was never able to get a reliably expert answer about my old Pro-23's charging circuit, and I have no knowledge about the Pro-96, re their ability to correctly charge NiMH or other non-NiCad batteries. Since the alternative would have been to buy a new, external, charger and swap out batteries all the time, I've stuck with the old-fashioned technology.

(Over the 11 years with the Pro-23 and 2 years with the Pro-96, I've had no problem with batteries or the scanner, save one: Since the scanner is on charge for long periods and running on battery for short periods, the batteries develop "memory", and go from lasting over 4 hours to lasting as little as 1 hour. Completely discharging the batteries and recharging them completely, and repeating the cycle a few times, largely restores their runtime. BTW, I label my new batteries with the purchase date [keeps sets together], and I have still-good batteries currently that date from 1998 and 1999.)

Car adapter: RS #273-1863
120V AC: RS #273-1767

There's a myth floating around that the "C" tip specified in the Pro-96 owner's manual is not the correct tip. Wrong. While the "B" tip seems to work, the smaller barrel puts you at risk of intermittent contact, which is the type of power problem that can do things to electronics that you'd probably prefer not to do.

The proper tip in a barrel-type power connector is important so that you get positive contact on the inside and the outside from the spring-loaded outside contact. Too large a tip will not fit into the jack; too small a tip will not put proper pressure on the contacts. (Too small of a tip might also not fit on the center pin.)

You can also buy the wall adapter for the Pro-96 from GRE it is the same one as the PSR-500 P/N 100-010 but you can't change the tip it is build right in the cord.

You may want to check the shape of the battery holder and the radio case where the batteries reside while you are using and charging them, since I believe that you mentioned that you have charged them internally.

I had a Regency HX-1000 (nice scanner way back when) that used rechargeable batteries, and one time that batteries overheated, this caused the distorting the rear plastic cover and the compartment where the batteries reside. I could never put the battery pack back into the radio again. Make sure that you never allow the batteries to overheat in the battery pack and/or inside the radio. Hopefully this isn't what happened that's preventing you from closing your batteries into the battery compartment with the rear cover, or getting the contacts to mate up.

On a lighter note, I'm surprised that no one was snarky yet and suggested that to mate up the contacts, that you should put the radio and battery holder into a dark container, and play Barry White music...

Regards,

Doug Gavilanes
Garden Grove, CA.

Ron are you having problems with the battery holder itself or the connections inside the pro-96? If its the holder, try using the other holder. The pro96 came with two holders. If both of them are having the same problem then you do have a problem with the internal connections of the scanner itself. If thats the problem, the only advice I can give is to try adjusting the contacts carefully with a needle nose pliers or a small screwdriver.

Carleton

13112. volume problems

Yahoo group: PRO-96 (2008 — 2017)
Date: 2008-11-10 07:20:20 UTC
From: John Hyde
Topic: 8977 Message: 13112

Hi all: I am having a problem with my pro-96, and this has been ongoing for the passed 6-8 months or so.
75% of the time when I turn the unit on, the volume is automatically blasting out at about 1/4 to 1/2 of the full volume range.
I get this even when I turn it on and set the volume right as low as it will go [basically the last possible threshold before I would turn it off].
Now the strange thing is, if I bump the antenna or move the bnc connection towards the front of the unit, the volume will dip [not quite to silent, but a lot lower than it is normally when it's acting up].
Has anyone else had this problem?
Thanks in advance.
-John

From: Steven Mrkvicka-Sr.
Topic: 8977 Message: 13115

sounds like a loose solder connection with the antenna. It will need to be re soldered. The same problem happened to my pro-37 re soldered the connection back on to the board and the problem went away.

13119. VHF freq steps

Yahoo group: PRO-96 (2008 — 2017)
Date: 2008-11-12 20:50:07 UTC
From: Harry Marnell
Topic: 13119 Message: 13119

I don't know if I just turned stupid or something, but is there a way to change the VHF frequency step size in the Pro-96 (other than doing it per-channel via software)? The manual's specs page says 137-175 Mhz has steps of "5, 6.25 or 7.5 kHz." Mine is doing 6.25 but I'd like the default to be 5 khz.

Thanks,

Harry

Date: 2008-11-19 17:45:34 UTC
From: Lisa
Topic: 10106 Message: 13123

I need to sale my Pro 96 handheld scanner.
It is in great condition.I have had it for about 6 months and honestly don't listen to it as much as I thought I would have.

When I got it I had the guy at Radio Shack program it for me to the Nashville, TN area. I have never taken the time to learn how to program it more, but I heard everything I wanted to from out local emergency force.

It is as new, complete with the box and manuel, 2 battery holders (one for re-chargeable), power adapter and a leather case. (I have some pictures if you would like to see them.)

If purchased at Radio Shack you would pay:
Pro 96 Scanner $379
9v - 800mA Adapter $19
Leather Case $35
Sub-TOTAL $433
Plus 8% Tax $34.64

Total $467.64

I am selling Everything for $350
Plus $15 for shipping and paypal fees.
For a total of $365. [;)]

Please let me know if you are interested or would like a picture.

Thanks,
Lisa

My understanding is that the Detroit system does not extend much outside the city limits. The 106 has many capabilities that the 96 does not, however the sensitivity on both radios is about the same and I have both.

I'm in Rochester Hills and can hear Detroit pretty well. Up here it
is pretty dependent on the antenna used. I find the best antenna is
an older duckie that I think came with an older Radio Shack scanner I
once had.

Listening to Detroit from SE Macomb County, with my Pro-96 and PSR-500 side by side, the PSR-500 is maybe 20% better receiving Detroit. Both are using the factory rubber duck antennas.

Have you checked your antenna? A good way to do this is tune to a noaa weather channel,or something else that is transmitting a continuous signal.Now check your coax cables by moving then around.If you are using a ruberduck move it around spin it and see if you hear and static wich could be a bad connection.sometimes the center pin will break.

Hi,
I don,t want to start a up roar . I have read the notes that everyone has writen and they are outstanding helpful hints. This is what has happened to me. My pro-96 has stopped working on the 800Mhz P25 which means that I can no longer use it on the Michigan State 800 MHz system . I had to go out and buy a new radio from Uniden. I had my Pro-96 for 5 years and just this past summer it just up and quite working. The Pro-96 kicks on all of the other systems. I have even talked to a former tech from Radio Shack about the problem and said as long as I was not getting the noise from the controllers when locked on the freq. I was in big trouble. I would get the RED and BLUE freqs. from RadioReference.com and put the in the radio and watch and see what the % number is and if it is 00% like mine was on the Michigan System in a town where there is a site you might be in trouble. Like I said this is my 2cents and I don,t want to start an up
roar.

From: newnethboy
Topic: 13145 Message: 13146

Yes, you can print from Win96, but it's a little indirect:

1. Download from scanner into Win96, and save as a .P96 file.
2. File>Export to a .CSV file (comma-separated values).
3. Print from Excel or any program that can read your .CSV file.

(Better yet, keep the file on the computer and save a tree.)

Win96 is the ONLY decent software for the Pro-96. It does everything that can be done to the Pro-96 (and some things that can't be done), and is very heavily supported by many, many users, with .P96 files available for a lot of areas. (See files on this group.) The only way to possibly improve on Win96 software is if you use a different scanner, say a PSR-500, a newer model (and even then, you'll want the Starrsoft app for that scanner--if you have any GRE-built scanner, you'll want the Starrsoft app for it).

From: Richard L. Elliston
Topic: 13152 Message: 13152

Rebanding took place on the Chattanooga / Hamilton County, TN TRS several weeks ago, and the Pro96 can be programmed to work perfectly. Anyone having any post-rebanding problems should take a quick look at the regional discussion forum for Tennessee in radioreference.com.

Hello Hank:

I was wondering if anyone ever got in contact with you about a P96 file
for Austin. I asked several months ago and got no response. Thanks
for any update you can offer.

13158. Re: Bank Name - display ??

Yahoo group: PRO-96 (2008 — 2017)
Date: 2008-12-24 21:41:20 UTC
From: Jared Ross
Topic: 12507 Message: 13158

This is what I have:

Conventional without Tone:
3rd line = station/channel
4th line = bank name

Conventional with Tone:
3rd line = station/channel
4th line = CTCSS/DCS Tone

How can a make the Bank Name be displayed in the 4th line instead of
the CTCSS/DCS Tone Code?

-Jared

From: Radio Lady
Topic: 12507 Message: 13159

I don't think you can do it, Jared. AFAIK, if you're conventional in DC or CT mode it's only going to show you either the PL or DPL tone or that it's "C-search"ing for them. In FM mode I think it does display the bank name, but then it doesn't help you with the tones.

My Pro-96 is on loan to somebody so I can't double check it, but I think I'm correct. I've been wrong a slew of times before, though.

13162. Squelch Issues

Yahoo group: PRO-96 (2008 — 2017)
Date: 2008-12-30 09:26:12 UTC
From: Jared Ross
Topic: 13162 Message: 13162

I am having a problem with my P-96 on some LAPD Freqs. The scanner stops on an active freq and opens the squelch fine, but when the transmission is over, it doesn't close, even with the squelch at max. I have to hit the scan button, and then it will go back to scanning fine. It doesn't stop on the same freq again unless there is traffic. Any ideas?

Thanks,

Jared

From: Scanjunkie
Topic: 13162 Message: 13163

Set the scanner on a frequency via the "MAN" button. Turn the squelch all the way up .you should hear a hissing sound. Turn the knob back until the hissing stops. Resume scanning.

Although I am a huge fan of ARC products by Butel, Win96 is a
fantastic application and I use it for both of my 2096's and my Pro96.
It was Win95 and a Pro95 that got me back into using Radio Shack
scanners after staying away for many years.

13167. YAHOO privacy issue

Yahoo group: PRO-96 (2008 — 2017)
Date: 2008-12-31 03:13:31 UTC
From: Brian Verhalen
Topic: 13167 Message: 13167

Just received this from another group I belong to, am passing it
along (with no comment from me included)

Yahoo is Tracking Group Members

If you belong to ANY Yahoo Groups - be aware that Yahoo is now using
"Web Beacons" to track every Yahoo Group user. It's similar to
cookies, but allows Yahoo to record every website and every group you
visit, even when you're not connected to Yahoo. Look at their updated
privacy statement at
<http://info.yahoo.com/privacy/us/yahoo/details.html>http://info.yahoo.com/privacy/us/yaho
o/details.html

About half-way down the page, in the section on cookies, you will see
a link that says WEB BEACONS.

Click on the phrase "Web Beacons." On the page that opens, on the
left find a box entitled "Opt-Out."

In that section find "opt-out of interest-matched advertising" link
that will let you "opt-out" of their snooping. Click it and then
click the opt-out button on the next page.

Note that Yahoo's invasion of your privacy - and your ability to
opt-out of it - is not user-specific. It is MACHINE specific. That
means you will have to opt-out on every computer (and browser) you use.

Please forward this to your other groups. You might complain, too,
but I'm not sure if anyone is listening. I remember when they signed
all users up to get spam and we had to opt out of that a few years ago.

13168. Re: [PRO-96] YAHOO privacy issue

Yahoo group: PRO-96 (2008 — 2017)
Date: 2008-12-31 03:41:55 UTC
From: newnethboy
Topic: 13167 Message: 13168

As I pointed out in reply to this on another group, to opt out successfully, you must opt out through EVERY BROWSER ON EVERY MACHINE you ever use. So if you have, for instance, both Firefox and IE on your PC and Firefox, IE, and Safari on your Mac, you'll be opting out FIVE SEPARATE TIMES to get yourself out of this invasion of privacy.

If I were a group owner, I'd be thinking very seriously of moving my group to Google. (BTW, when Yahoo! was going to list porn sites, like about 10 years ago, I stopped using the Yahoo! search engine and went to Google, and I've never gone back [even though they abandoned that idea quickly]. Are you listening to your market, Yahoo!?)

Suggestion to GROUP OWNER: A post to the owners' group including the concept that many of your 2454 members are urging you to move the group to Google might make the point that we think this Web Beacons nonsense would be much more palatable in the past tense.

From: Rick Bates
Topic: 13167 Message: 13170

And again (since we share a number of groups), opting out is only another cookie which routinely gets cleared out if you user CCleaner or similar. Meaning once you do a normal cleaning (you DO don't you?) you have to re-opt out.

We won't get any of the free services to stop this 'feature' (it's lucrative) but we can control cookies on our browsers and similar (anti-spyware is another good place to look).

don't these beacons require cookies and/or javascript and/or persistent cache? Surf safely - turn these all off.

I'm going to suggest they bring back the porn but stop carrying anything about Obama. Everybody has their own obscenity standards, you know.

First question is, what do you mean by "programmer lead"? I've never seen that term. Are you referring to the "scanner programming cable"?

The acceptable available cable is the RadioShack item # 20-047 ($32.99), which attaches to your Windows computer via USB and acts like a serial connection. There used to be a serial cable that if you own one, it will work, but it's not available anywhere.

Anybody know about the ICOM cable?

The original ICOM cable converts between RS-232 levels
and TTL, and is used with ICOM's CI-V serial protocol.

Because of the ongoing disappearance of RS-232 ports,
later models utilise a USB connection.

Jared:
Very interesting. I have had that problem but only on LAPD Simplex/Fallback frequencies. I just assumed there was some sort of carrier type signal being transmitted. I live in Porter Ranch and just locked out all of the Valley simplex frequencies in my main bank and I just manually go to that channel when the airship says switch to simplex or I can see Blue Thunder orbiting in the area.

Hi Jared,

On my PRO-96 and PRO-106, lots of times the scanners stop on LAPD frequencies, but there is no audio for awhile, then the scanners start scanning again. Does anybody know what causes this?

Thanks,
Gary

Hi, Gary,

I haven't experienced that with my 96. I did notice when I updated the DSP that it created problems where LAPD transmissions would lose sync and go to noise. I went back to one of the original DSP's from Radio Shack, the problem went away. I can't seem to find the page on the RS site where they have the Pro-96 software downloads, though there may be some on the files area on here.

In Jared's case, it really sounds to me like the same thing I encountered when I had the mode on my LAPD bank set to MOT instead of FM.

I swore I would never start a panic thread about any of my radios. I currently have three portables ..

Radio shack Pro96

Radio shack Pro 167

GRE PSR 500

It's my understanding that both the Radio shack Pro 167 and GRE PSR 500 are o.k for rebanding with the Pro 167 needing a firmware upgrade.

What is the status of the Radio shack Pro96? Please,I don't want speculation. I'd like to know if anyone knows exactly what's going on with it,thanks

Steve

HI All,
Happy New Year!! I have a PRO-96 that I have had for about 4 years or so. It has always worked perfectly. I have never charged batteries in the unit. It has always been done via an external charger. Recently, I only seem to be getting half of the normal time out of a set of rechargeable batteries. Thinking it was the batteries I bought a new set of Duracell 2650mAh batts and gave therm a shot. I still only seem to be getting about 5 or 6 hours out of them. I used to get 12 or more. Just to be safe I tried a third set of new batteries and had the same result.

I even tried using different battery trays and external chargers...same result.

Any thoughts on what might be causing this?

Thanks all for your help!!

Mark

If using Win96, check your Battery Level LO setting. It should be 3.94 VDC.

I check the MOT vs. FM issue, the bank is definately in FM mode, so that is not the issue. The Scanner does have DSP 1.4 on it, but I haven't had a chance to revert it and I'm headed back to DC. I will see how it works with DCFD and MPD, and will revert to 1.3 if I have any trouble.

Thanks for all the answers,

Jared

Win 92 is for only Pro-92
Win 95 is for only Pro-95
Win 96 is for only Pro-96
Win 97 however is a dual program and will cover the Pro-97 and
PRO-2055,PSR-300/400 & compatible with the PRO-164/163 IT will not work on
the Pro-2051.
does this help.

Jared,
I have had nothing but pure .... with my second pro-96 in the shop more than in my possesion. I did have that trouble once. I tried to initalize it, I flashed it with the 96 software and then I noticed a dimminished preformance so I sent it in took a month to get it back that time...
My word is this if you have a warranty send it back now and tell them that they didn't fix the problem I know you will be without it for however long they decied to keep it but, with luck it will come back like new and the problem will have gone away.
Good luck with the second set.

From: Don Starr
Topic: 13188 Message: 13200

>win97 won't work for the Pro-96 for several reasons the most logical one is
>it was made by another company

The PRO-97 and PRO-96 were both made by the same company: GRE.

>and (I can say this with reasonable
>certianity as I own both) the Pro-96 has 49 channels per bank before it
>turns over, the Pro-97 has 99 channels.

The PRO-96 has 50 channels per bank; the PRO-97 has 100 channels per bank
(channel numbering in both starts at zero).

13201. Radio stuck in same alert mode.

Date: 2009-01-08 08:51:03 UTC
From: Steve
Topic: 13201 Message: 13201

I had my radio on same alert stand by. I've since tried to get out of stand by. And it won't budge! I've tried resetting it. Still a no go . .I am going to call Radio shack Thursday morning to see if they can help me. I am hoping,well praying someone else out there has had this issue and can help me. .

By the way, it will allow me to test the same alert feature but that's all it will do.

13202. Radio stuck in same alert mode.Problem solved.

Yahoo group: PRO-96 (2008 — 2017)
Date: 2009-01-08 18:21:14 UTC
From: Steve
Topic: 13201 Message: 13202

The issue was resolved this morning. I'd forgotten a step to get the radio out of same weather alert mode.

13203. Two Questions

Yahoo group: PRO-96 (2008 — 2017)
Date: 2009-01-10 19:25:13 UTC
From: Jared Ross
Topic: 13203 Message: 13203

Two easy questions:

1. What do the pluses and minuses below each bank number on the scanning screen mean?

2. How can I manually select a TG to listen to. I know that I can pause an active TG, but what if it is not active and I just want to hear one TG?

Thanks,

Jared

This list is for discussion about anything related to Radio Shack's GRE built PRO-96 Digital capable Scanner. This includes Any and all Software for the PRO-96. You can also place your p96 data files for WIN96 software in the files section.

We are the official recognized List by both GRE America, and Radio Shack, And Starrsoft software For the PRO-96..... Several Members are on this list and Our Sister List.

Thanks for your support

Group Contact, subscribe & unsubscribe info:

Post message: PRO-96@yahoogroups.com
Subscribe: PRO-96-subscribe@yahoogroups.com
Unsubscribe: PRO-96-unsubscribe@yahoogroups.com
List owner: PRO-96-owner@yahoogroups.com

Also, Our sister Group RS_GRE-Digital-Scanner@yahoogroups.com is available for People who want to talk about any of the Radio Shack GRE built or planned Digital capable Scanners.

Please enjoy the list....

Thanks

>
> 1. In case you don't know what "open" and "closed" mean in this context: First, the context is trunked systems; if you have a bank that's all conventional, the plus or minus is irrelevant. Now, "open" means that you'll hear all TGs in that bank, even those you don't have entered in the TGs table. "Closed" means you'll hear only the TGs you have entered and not locked out.
>
> From the keypad, while stopped on a bank, press FUNC, 5. (Manual, p. 92)

Thanks for that newnetboy. I noticed on my DTS-96 scanner the same thing. All banks but one had a + sign with one the - sign. I thought it might have something to do with trunking but when I checked each channel in the bank, none were trunking. Your suggestion on FUNC 5 has changed them all to +. I've only just joined the list and its been a big help already.

From: newnethboy
Topic: 13203 Message: 13208

My experience exactly. I joined this group in November 2007, having had my Pro-96 for a year but having done no trunking and totally lost. I quickly learned from this group, and got knowledgeable enough to be giving advice now.

Welcome! Enjoy!

From: adamc46324
Topic: 13209 Message: 13209

Okay, I'm hoping someone can tell me what I'm doing wrong.

I have sold my PRO 96 and will be shipping it out tomorrow. However, I don't want to ship it full of Chicago area frequencies seeing I'm sending it to Delaware.

I've tried following the instructions in the manual for re-initializing the scanner, but it doesn't seem to work. The information is still in each folder.

I really need to get this radio cleaned out. Any help / tips / suggestions / comments will be greatly appreciated. Many thanks in advance.

From: Hank Salzmann
Topic: 13247 Message: 13247

I have put in all the Region 6 (Waco) frequencies in my PRO-96, I live in Brazos County. I can hear the Base in Bryan, but never hear any of the mobiles, even if I am with in a 1/2 mile of them unless they are talking to Brazos County Sheriff's Office on the local channels.
I am using the 800mzh antenna. I have the Bank set to MOT and each channel set to FM, except those that have a CT code.

Any suggestions on how to improve my reception?

HAVE A GREAT FIRE FREE DAY

I'm in Houston and receiving the digital DPS frequencies as analog channels. I haven't gotten any of the car-to-car traffic (too far off). Maybe it's different where you are, but down here there would be no reason that I know of to set the bank to Motorola (they aren't trunked).

OK...

Had an issue where the squelch was 'acting up', had to turn the knob more and more to the right to operate. Then the squelch would stay open for a half second when a transmission would stop. Mostly this happened on the UHF band.

So I opened the case, (remove 4 screws). Once the back is off the main board appears to be plugged into a second board at two locations, left side and top right.

I unplugged then plugged back in, reassembled and to my amazement the issue has not re-occurred.

I think the contacts were renewed or cleaned by unplugging and plugging in the board.

May be worth a shot if anyone is having an issue with squelch, can't hurt and it's easy.

Still baffled as to why it worked, but way happy it did.

13262. Recording Scanner While Listening to It

Yahoo group: PRO-96 (2008 — 2017)
Date: 2009-01-31 17:33:15 UTC
From: Jared Ross
Topic: 13262 Message: 13262

I would like to be able to record the output of my Pro-96 while listening to the output. If I plug the headphone output of the Pro-96 into my computer's line in, my computer can record the audio, but I can't listen to it live. I think I need to put a loop on my sound card, but I can't seem to find the option. Does anyone have any suggestions for programs that are able to do this?

Thanks,

Jared

The connector on the Pro-96 works on both sides of a stereo headset. You can try a splitter at the connector, one side going to the computer, the other to a speaker. But I'd suspect that you or the computer will want different volume levels.

search for scanner recorder. There are a bunch of programs that should
do this. Also check Audacity. It's a open source multi platform audio
editor.

Your computer's "speaker out" connection should give you whatever is live on the computer. If you're feeding the scanner into the computer's sound input, it should come out of the speakers. If you're recording, I should think your recording software would have something like an audio amp's "monitor" switch, so you feed through to the speakers what you're recording.

Unless that input is "muted" or has its volume set to zero in a "mixer".
For example, in Windows, you can record from a microphone input but not
hear that audio - if the "microphone input" is muted in the Playback
properties in Windows' mixer.

it should come out of the speakers. If you're recording, I should think your
recording software would have something like an audio amp's "monitor"
switch, so you feed through to the speakers what you're recording.

Subject: [PRO-96] Recording Scanner While Listening to It

I would like to be able to record the output of my Pro-96 while
listening to the output. If I plug the headphone output of the Pro-96
into my computer's line in, my computer can record the audio, but I
can't listen to it live. I think I need to put a loop on my sound
card, but I can't seem to find the option. Does anyone have any
suggestions for programs that are able to do this?

Thanks,

Jared

13271. Display Question

Yahoo group: PRO-96 (2008 — 2017)
Date: 2009-02-02 16:08:48 UTC
From: Mike Lanning
Topic: 218 Message: 13271

I was given my Pro 96 from a friend and I didnt receive a operations guide with it, Ive figured out most stuff with it.

1 question , when you have it in CT search mode and the display shows the CT tone then a "S" after it . What does the "S" mean is that Simplex ?

I have gotten that when im listening to the BNSF railroad near me in Arizona. I dont think it could be a simplex freq since their dispatch is in Ft Worth TX.

Thanks for the help
Mike

Here is a copy of the owner manual (it may not pass to the group so cc private email).

The S means search, shown until it is locked into a memory.

I use the (also free) ScannerRecorder app, which does have optional VOX recording via a slider control. It can record in either .wav, mp3, and a couple other formats. http://www.davee.com/scanrec/

That means that it's searching the CT's for the transmitted tone. To lock in the CT for that agency, you then press ENTER. Or, if you leave it, it will continue to search for CT's in use on that frequency.

I'll answer a few questions:

Yes, I am using Vista.

I tried a few audio programs that I have on my machine including Audacity. Audacity was the only one that I got to work, but the audio was so poor quality on the live playback that I couldn't make anything out.

I don't think the connector is an issue, I am using a 3 connector 3.5mm to 3 connector 3.5mm cable. I have used stereo headphones with a 3 connector 3.5mm plug to listen to the scanner, and I get audio on both ears.

I haven't had the opportunity to get near Nashua but if you are using Win96 you might try changing the trunking table to multi and then select 800mhz rebanded to see if that works. Although I have read that they have not rebanded all of the voice channels yet. Doing it piecemeal I guess.

Possibly your ARC96 software is doing something weird. Posts on this group have stated that the program has glitches.

The Balto.Co. system is very complex (way beyond my understanding, plus I'm on the opposite side of the country), and I'm sure any one little thing wrong will keep it from working. Try downloading and installing Win96 >http://www.starrsoft.com/software/Win96/< (free for 30 days) and see if it makes your Pro-96 work the Balto.Co. correctly.

Many, many of us in this group are using and very happy with Win96.

Topic: 13285 Message: 13286

There are different versions of the decoding firmware that you can try.

While in MANual go to a control channel and see what the decode rate is (expressed in %). That may give you a clue. If low, the signal /may/ be blocked by a stronger signal.

Encrypted traffic is ignored, you won't hear it. It's possible that some of the units are encrypted and others aren't.

Also verify (twice) that you have ALL the control channels AND the table(s) set correctly for the system.

Are you close enough enough to hear any of the control frequencies listed? Also it is a simulcast system and if you are in range of more than one transmitter, some scanners have problems receiving same. Also on a Pro 96 only enter the control frequencies.

Chip,

You should have the control channel's set to MO for Motorola. And you should have the Bank set on MOT for Motorola. Then the scanner should decode the P25 voice on the voice channel's by itself.

Hello Everyone, I am glad I found this group. I have owned the Pro - 96 since it came out. I originally bought it for my husband but neither one of us have been able to figure out how to program it. So, I am coming to this group for help. Hopefully, I am not the only one with this problem and others have found a way to solve the mystery. If anyone knows where I can get some simple instructions, please let me know. I really would like to be able to listen to this scanner.

Elaine

See my file in http://groups.yahoo.com/group/PRO-96/files/ : WhatsP96.txt.
This will give you a quick start.

You are far from alone in programming a Pro-96. Many of us simply don't ever
program ours from the keypad, but we always use the software. Further, many
of us rely on .P96 files others have created.

The software should take you from totally lost to "this is great!" nearly
instantly.

From: Rick Bates
Topic: 12669 Message: 13319

First you want to start the program, click on Configuration, then Misc, then the "P96 File Associate" so that when you click on a .p96 file it will bring up Win96. Then for now, with the program still running you can do a File | Open to open the .p96 file.

Are you SURE that the file is a valid .p96 file?

Or if your question is, "When I open the file, the frequencies don't go into my scanner":

First, open the .P96 file in Win96.

Second, do Scanner > Upload to Scanner.

If you've properly connected your scanner via the 20-047 cable, properly configured the cable, and told Win96 where the cable is, the file should load into your scanner.

I was using the demo for arc96 not win96. I thought they were the same. Downloaded win96 and was able to open the p96 files. Is anyone using arc96? Is win96 better? Any opinions would be appreciated before I buy one.

Thanks, Bob

Correct, ARC 96 will not open a .p96 file.

To answer your next question, YES. Win96 adds features and controls not available in other software. Like expanding the receive ranges (frequencies) setting multiple tables (it's the ONLY way to do that) and some other neat things. Check the web page for more info.

When you buy it (and you should) make sure you save the unlock key in many places.

Another vote for Win96, hands-down.

An explanation about all the warnings to save your key: Every view months, somebody gets on this group whining that s/he lost the key and Don Starr won't replace it. He won't. (Nor will most other software vendors.) Don does some pretty amazing stuff. He's written fabulous interface software for all of the GRE scanners, software that allows the user to do things GRE didn't even know could be done. Once you buy a particular product (say, Win96), upgrades are free. (That is NOT something most other software vendors do!) But he won't replace your key; he's not your mommy. (BTW, Don does this software in his free time; he has a day job--also wife and kids. Which is why he doesn't have time to babysit users.)

It might run under WINE, but I doubt it since it needs a key entered into the 'registry' that doesn't exist with WINE.

I never tried WINE, more than I wanted to bother with.

This reply gets a little OT, but....

I want so badly to see Linux take over the world. What we're lacking is apps software other than server and mainstream office apps, and we need better hardware support.

I won't be able to migrate until Linux can support: PDA, glucometer, scanner, cell phone, TV tuner, and more. And I need apps for accounting, genealogy, Bible study, many more, and interface with the above hardware, esp. for personal productivity (i.e. Outlook-to/from-PDA).

Linux could take big chunks of market if the computer vendors would sell turnkey setups with Linux and basic apps installed and supported.

End of rant.

Let's get back on topic.

...and you CANNOT do it from the scanner's keypad. (Odd, isn't it.)

A suggestion (based on a PD loss prevention presentation): I put into my Pro-96 display: STOLEN FROM and my driver's license number. (I also physically mark all my valuables that way, including the scanner.)

Reasoning:
1. The presence of the wording "Stolen from" gives an officer probable cause to further investigate the subject's possession of the property.

2. You, the owner, are identified to the officer but not to the subject, so that s/he can't say either, "My name is <name>," or, "It belongs to my friend, <name>."

(On the third line of the Pro-96 display, I identify the setup.)

Good Afternoon,

I was wondering if there is a way to change the text on the screen display
when you first turn the scanner on. Thanks for all of your help.

Elaine, I would strongly recommend Win-96 programming software have you
tried that?

Jim

Ok I tried Win96. I downloaded it just like the directions said to. Every
time I try to open it, it crashes. I even tried the compatibility mode for xp.
Any suggestions. I am running Vista.

Elaine

What you may have to do is completely remove the program using the add/
remove utility in the control panel and reinstall Win96.
I have it running on my machine using Vista with no issues at all..
Also make sure you have the latest patches and updates for Vista
installed.

13342. Pro-96 question.

Yahoo group: PRO-96 (2008 — 2017)
Date: 2009-03-25 08:21:14 UTC
From: Allan Love Jr
Topic: 13342 Message: 13342

Hi everyone.
I asked a good friend of mine who helped to install some new software into my Pro-96 for me. When I monitor the Washington County and Blair Police. I get this on my screen.....

Displayed on Scanner screen -----> 96:----- 00% <-----
I am monitoring everything on DG/Digital. Why don't I get a 5 digit MO/Motorola code? This is the Frequency that I am monitoring now : 866.41250MHZ. So far the new software is working just fine. And I can hear everything that is being said.

This was my old software.
CPU : F1.4
DSP-App : F1.2
DSP-Voc : F1.0

And this is my new upgrade.
CPU : F1.4
DSP-App : U1.3
DSP-Voc : F1.0

Later everyone.

13343. PRO 96 goes into dg mode when a signal is received

Yahoo group: PRO-96 (2008 — 2017)
Date: 2009-03-28 19:42:36 UTC
From: tedsueack
Topic: 13343 Message: 13343

Have a 08A03 dated Pro 96 and it goes into dg mode whenever a signal is received, When looking at the version it states:
CPU F1.1
DSP-App:
DSP-Voc:

If I let it sit for a length of time , could be 5 min to a week, it will come back to showing a version of DSP-App and DSP-Voc, I can't remember what the versions were, and work properly again until it decides to malfunction again.

I have upgraded to DSP 1.2 and 1.3 and it still has the same problem.
Any ideas???

13344. Internal battery charger

From: agentmotor
Topic: 12357 Message: 13345

All three of those are great ideas! Bluetooth would be cool especially in travel, you could keep the ear piece on even when you go to the store, you can still monitor from your car..

as for the SD CARD that can record audio streams from FAV or preferred channels, the display could have the amount of time recorded on the card, like 30 seconds, 2 minutes, 1 hour and so on.. i would definitely like that type of feature.. i know just by putting 2 scanners next to each other scanning the same frequencies, alot of the time you will hear 2-3 different transmissions on other channels and might miss something.

you could also add an option to record all channels during peak or emergency situations so you can review it on your computer (or scanner) later...

could someone tell me exactly what the disciminator ooutput mod does? i assume it is an output for some unfilititred audio, but will this allow me to hear the unencryped digital talkgroups that i can't hear except for digital nois? whats the real benefit to having this disc tap?

thanks,
brad

13346. RE: FW: [PRO-96] Future scanners

Yahoo group: PRO-96 (2008 — 2017)
Date: 2009-03-31 02:01:24 UTC
From: Rick Bates
Topic: 12357 Message: 13346

Let's go one step farther. Let a vehicle display (commonly nav/radio only) display detailed aspects of engine performance, have USB input for NMEA (GPS) data (for ham APRS input) and/or a standardized data packet from the scanner (who's talking on what channel) as well as the ability to connect and display to any bluetooth phone information (who's calling, there on your dash) with a second BT channel for your headset (vehicles are noisy, headsets vary in ability to clamp that).

Ah well, that's dreaming since it would require many disciplines to cooperate (radio, car, gps, you get the idea).

A discriminator output will give you uncompensated (no de-emphasis) audio (it will sound crappy if you try to listen to it, but some computers love it). It allows you to use some computer programs to decode the packets of data for analysis of a network (allowing you to figure out the tables, talkgroups and a whole bunch of trivia). I use the record ouput on my ancient (but still working)

Anything you ever read about a radio receiver or transmitter will basically say, "mileage may vary". That's because there are many variables in radio signaling, most notably physical barriers: buildings, hills and valleys, curvature of the earth. Different wavelengths have different characteristics for distance and for overcoming obstacles, so distance estimates which apply to one wavelength won't work for another.

The quickest "answer" to your question is, for some stations/frequencies in your area, you'll get them loud and strong, while for others, you can't get them. Currently, I'm consistently receiving, in the ~470MHz range, from repeater towers as much as 10 miles from me. (I've received from these sites when I was 50-60 miles away, sometimes better than when I'm at home, under 10 miles.)

A more useful question, at such a time as you're shopping for a scanner, is, "Which of these scanners works better for what I want to monitor where I am?" People on this group, or better on local scanner groups, can tell you what they're experiencing.

I had a friend south of Albany, NY, who could pick up FDNY, using an outdoor antenna. (This was when FDNY was on 154MHz band.) "Results not typical."

I'm afriad to answer this that I don't get caught in an April Fools joke.

Scanner pickup can depend on a persons location and elevation of rpts. I live in central ca. I can pick up frequencies in several counties in a radius of 30 miles with rubber duck and about 50 miles on a roof mount antenna. But everyone will be different.

And it depends on the band used as well as the atmospheric conditions (yes, really). I once watched a TV station transmitting from Lethbridge, Canada (channel 2 I think, 54 MHz if that was so), except that I was on the central coast of California at the time (not on satellite and before Internet TV). Lotsa variables and the most accurate answer is, it depends. At work we used to hear the east coast and deep south frequently in the summer (46 MHz range) and occasionally a language that I could not determine (Asian or perhaps Tagolog, it was spoken VERY quickly too).

Subject: [PRO-96] PRO-96 For Sale

I am selling my PRO-96. This scanner is in absolutely MINT condition. I purchased it new, and it has always been used in a non smoking environment. The 96 comes with both battery trays, owners manuals, and the original stock antenna. This 96 is perfect in every way. I will ship it to your door priority mail, insured, for $240.00. You can email me at, scannerman12@...
or you can contact me through the group. Thanks for your interest.

This list is for discussion about anything related to Radio Shack's GRE built PRO-96 Digital capable Scanner. This includes Any and all Software for the PRO-96. You can also place your p96 data files for WIN96 software in the files section.

We are the official recognized List by both GRE America, and Radio Shack, And Starrsoft software For the PRO-96..... Several Members are on this list and Our Sister List.

Thanks for your support

http://www.scannermaster.com/Radio_Shack_Scanners_Leather_Case_with_Swivel_p
/01-580852.htm

I've been using one for several months now, and it's great.

Disadvantages:
Not cheap.
Weighs almost as much as the scanner.
Sticks out from the belt more than I'd like.
Scanner gets a little warm while charging batteries.

Advantages:
Bullet-proof, will probably outlast this scanner and the next one.
Scanner will not fall. (Unless you're REALLY determined!)
Mount swivels, so a bump is not a bruise.
No plastic! (Esp. no plastic belt clip to break and then Radio Shack has
only two employees worldwide who will or can sell you a replacement--at
least I assume they have a couple; I haven't found any.)

I don't know where you're located? But Albuquerque New Mexico police have their system set up so that only one side can be heard. The other side is encrypted. It's against the law, but they do it. That might be the case with what's happening to you.

Unless you can give us the citation code you're referring to, I'm gonna have to say, bull. Encryption is not illegal for public agencies and if they choose to only encrypt one side, that's their issue. It IS illegal for ham radio.

What you may be thinking of is that it is illegal to DEcrypt what you scan. Encryption is common and more so in law enforcement (can't give the bad guys ALL the advantages).

Steve where are you getting this from? It is NOT against the law for law enforment agencies to encrypt their conversation if they choose to do so. You may feel we have a right to hear as hams, but their are criminals out there with scanners just like us. Therefore it may be neccessary to encypt for their protection.

Digital will give weird sounds (typically high-pitched in my experience) if the received signal is not quite strong enough. Could be that's what you're hearing.

Also, I'd think that digital encrypted wouldn't sound like analog scrambled. Analog scrambling is technically limited to modifying the analog modulation real-time, whereas with digital the technology allows all kinds of possibilities and the receiver gets a digital stream, not a modulation.

And there's a distinct possibility that you don't have it programmed correctly. With a digital signal, there's no "almost", not in signal strength nor in programming; you get it or you don't get it (or you get something weird, perhaps).

BTW, you still haven't told us whom exactly you're trying to monitor ("up north" doesn't tell us what YOU mean by up north). Somebody named Jeff Gaul chimed in with "capital region" of NYS; was that anything related to you?

What exact agency are you attempting to monitor and having trouble with?

For the benefit of someone who's new to the Pro-106: There are several Yahoo! Groups for the Pro-106. Which one is the "official" one?

13395. PRO-106 vs. PRO-96 EDACS Reception Question

Yahoo group: PRO-96 (2008 — 2017)
Date: 2009-06-23 15:31:36 UTC
From: boguscop1953
Topic: 13395 Message: 13395

Someone from the RadioRefence forum suggested I post this here since perhaps someone from the GRE Team can look at it.

I have a PRO-106 and a newly acquired PRO-96. When monitoring the same EDACS system with both radios, I have noticed that the PRO-96 tends to sometimes miss the callback transmissions for an EDACS system I am monitoring whereas the PRO-106 receives it with no problem. I also occasionally get the raw cc "motorboating" sound on the PRO-96 with this EDACS system. Also while the PRO-106 is receiving a signal, the display on the 96 flashes with the frequency but the scanner is silent. The firmware in the PRO-96 was 1.3, and I set it back to 1.2 hoping it would cure this problem, which it made no difference in the reception. It seems like the 96 is not as sensitive as the 106 for EDACS. I have changed antennas including the RS800MHZ rubber duck and an outside antenna 30 feet in the air with no change in results.

The system I am monitoring is at Scanner Frequencies: Terre Haute Trunking System, Terre Haute, Indiana. I have not programmed any of the Provoice encrypted channels in either radio. I use Win96 for the 96 and Win500 for the 106.

Both radios track the Project Safe-T Motorola Type II SmartZone Omnilink system equally well. I cannot see a difference. Reception is very good on both radios.

I do have the EDACS systems programmed correctly in both radios.ccs starting with channel 001 and in LCN order.

Does anyone have any thoughts on this? Thanks.

See if the small ring inside bottom of antenna base is loose. Very easy to tighten with small narrow tool and turn clockwise!

In a message dated 6/25/2009 10:30:38 A.M. Eastern Daylight Time, matthew737@... writes:

Hey there,

What can I do about the antenna? It is so loose and makes the reception bad. Any ideas?

TIA

Matthew

make sure it's not the connector: take off the antenna and see if the BNC connector on the scanner is loose. If it's not, it's the antenna itself.

The typical rubber duckie antenna that comes with scanners is garbage (unless it works ok for your purposes). I use a magnetic mount antenna when I'm in the car and something taller at home.

You might want to check on a different antenna - perhaps one that telescopes or a more specialized scanner antenna.

When monitoring the same EDACS system with both radios, I have noticed that the PRO-96 tends to sometimes miss the callback transmissions for an EDACS system I am monitoring whereas the PRO-106 receives it with no problem. I also occasionally get the raw cc "motorboating" sound on the PRO-96 with this EDACS system. Also while the PRO-106 is receiving a signal, the display on the 96 flashes with the frequency but the scanner is silent. The firmware in the PRO-96 was 1.3, and I set it back to 1.2 hoping it would cure this problem, which it made no difference in the reception. It seems like the 96 is not as sensitive as the 106 for EDACS. I have changed antennas including the RS800MHZ rubber duck and an outside antenna 30 feet in the air with no change in results.
>
> The system I am monitoring is at Scanner Frequencies: Terre Haute Trunking System, Terre Haute, Indiana. I have not programmed any of the Provoice encrypted channels in either radio. I use Win96 for the 96 and Win500 for the 106.

Have you tried adjusting the trunking ID delay? It specifies the amount of time the scanner listens to the control channel looking for reply traffic on the previous talkgroup before scanning again. Page 95 of the manual tells how to adjust it.

This list is for discussion about anything related to Radio Shack's GRE built PRO-96 Digital capable Scanner. This includes Any and all Software for the PRO-96. You can also place your p96 data files for WIN96 software in the files section.

We are the official recognized List by both GRE America, and Radio Shack, And Starrsoft software For the PRO-96..... Several Members are on this list and Our Sister List.

Thanks for your support

Group Contact, subscribe & unsubscribe info:

Since I am using Win96, I assume that is the number that is now 2000 above the list of talk groups. I set delay on all of the EDACS freqs. Didnt seem to help, Im thinking maybe there is something wrong with the EDACS decoding on this particular scanner.

D-Star is a non-proprietary digital format only supported by Icom for their amateur radio digital models. No other manufacturer supports it (or plans to) it appears, and it is not P-25 compatible. If we really wanted digital amateur voice communications, we could always buy used Moto radios, like usual. ICOM gives away repeaters if you purchase enough mobile units. Some government agencies (in the hurricane prone zones) are adding D-Star capability to their EOC amateur radio positions (probably at the encouragement of a local ham with some say in the matter that already owns their own D-Star gear). I'm just sayin'...

Not correct, the Icom IC-R2500 receiver/scanner supports D-Star with the optional UT-118 D-Star Module; also it will receive digital APCO-P25 transmissions with another optional module.

13423. Problem with programming?

Yahoo group: PRO-96 (2008 — 2017)
Date: 2009-07-06 03:59:34 UTC
From: robby_simmons
Topic: 13423 Message: 13423

Let me start by saying I am a radio dummy. But I do enjoy it! My problem is simple I have programmed my Pro-96 scanner using Win-96 and Radio Reference. I imported straight from RR using the Win-96 program to do so. The problem is that I never "hear" activity on the Trunked chanel for Missouri, St. Charles, City. I know that they are busy so I should be getting something? What can I be doing wrong? Any advice will be appreciated. I will provide any additional information if needed. I'll even give you my phone number if you want to help! I just know that there is so much more to hear that I am missing. I have checked the basics I think, it is loaded in the radio, it isn't locked out and I am getting other frequencies just fine so I do know the radio itself is fine. I hope that someone can help me.

Thanks

Robby

I also have a 96 and 106 and I get the same results on our P25 system. However, there are times when the 106 misses calls and the 96 gets them fine. Signal strength is not a problem since I live within 1000 ft of one of the six towers. I've programmed nearly 100 different scanners (uniden, gre & rs) for people all over town and they all suffer from the same problem of missing calls, but the 09 and 2096 are the only ones that have the "motorboating" problem.

>
>That was the situation with me. I had the box checked and it was importing only the ccs. Interestingly enough, in Win500 for the 106, this box is NOT checked when importing an EDACS system. The default on this probably should be changed to unchecked, but I won't hold my breath. While very good software, the Win series has its little nuances and pitfalls like this one.

Well, good but also *bad* news, John. I was about to offer you the two batt holders from my recently deceased Pro-96. About two months ago I had mistakenly left it plugged into the wall with 3 rechargeable and one alkaline battery in it. In the yellow holder. Several days later it was as close to dead as it could be. It would turn on and off, and scan what it was set for, but NONE of the buttons worked. None. Zero. Only the volume and squelch knobs. The paper-clip reset procedure didn't work, reloading it via Win96 didn't work, nothing. All it would do was scan the three banks it had last been set to. The alkaline batt had leaked and there was a mix of dried black and gold "ooze" leading into in the battery compartment near the three contacts.

R/S said any repairs would set me back something like $200, *if* it could even be repaired. So off to the dust box it went. I finally had to eat my own words from this forum, that I should've known better than to recharge batts in the scanner (much less MIX the battery types, I forget what "emergency" prompted me to do that nitwit thing in the first place). I now had the well-known $500 paperweight.

When your email came in I thought to myself, "Self, might as well part it out and offer good ol' John the two battery cases." So I retrieved it from the garage, slid in the black case w/4 alkalines just to give it the old "one last try" before making it a salvage case.

You guessed it. The darn thing is suddenly (a month+ later) working just like new. Even the buttons. Every one of them (yep, I've checked *everything*).

So, while I'm sorry I won't be offering you my battery cases - they are hard to find, it seems - I've got my Pro-96 back. And I'm here to remind all 2,433 people on here NOT to risk using your Pro-96 as a battery charger. Invest $20 or $30 or whatever in a real charger. I could find half a dozen posts I've made here and on other groups telling people that I'd heard rumors of scanners getting trashed while recharging the batteries IN them, but "I haven't had a problem in 30 years of scanning." Well, I'm swallowing those words now, but at least the taste is palatable since the darn scanner somehow "reset" itself back to default after a month with no power being applied to it ("universal reset #2??).

Good luck finding the cases. At least a BLACK case. Stay away from electricity and those yellow ones.

Harry

Hey Harry: Thanks for the response.
That's all good. As a fellow scannist I would rather you have your unit fully functioning again.
I'm sure someone will come along with one, or I will find one sooner rather than later.
-John

people that I'd heard rumors of scanners getting trashed while recharging the batteries IN them, but "I haven't had a problem in 30 years of scanning." Well, I'm swallowing those words now, but at least the taste is palatable since the darn scanner somehow "reset" itself back to default after a month with no power being applied to it ("universal reset #2??).

Good luck finding the cases. At least a BLACK case. Stay away from electricity and those yellow ones.

From: w4abw
Topic: 13433 Message: 13433

I bought a PRO-96 about 2 years ago. The audio is kinda piercing, maybe tinny is the word I'm seeking. I will say I do not scan very much. I listen mainly to the National Park Service on 169.55. The Great Smoky Mountains Nat Park in NC and TN. Occasionally I scan the ham 2m repeaters around that area and this new digital sounds real different from what FM used to sound before the National Park changed the protocol and interupted my listening pleasure. Any comments about the audio ? Is it normal to sound shrill ?

Tnx

Just wondering where a fella would be able to get a replacement battery holder? Either the rechargeable one or the black one. Either would do. I've misplaced both of mine, and well I never used it with rechargeables anyways.
Thanks in advance fellow 96'ers.

In my experience, my Pro-96 was as good as or better than my Pro-23 for the first year I had it.

Then my local fire dispatch system went digital/trunked, and I immediately noticed that the voice quality was different. I want to say it was a little "tinny" but that doesn't quite describe it.

I've had occasion to listen to this radio system over the "official" radio units, and the audio quality of the Pro-96 is far inferior.

I'm guessing that the digital synthesis in the Pro-96 does not reconstitute the entire digital signal (maybe lower sampling rate or something like that?).

Have you guys tried it with earphones? That might settle some of the sampling questions. I use mine with headphones regularly (most of the time, actually) and I find the audio better than other scanners I've owned over the past 10 years. Uniden scanners are nice and easy to use, but the audio quality isn't as good as these GRE ones, just louder.

13437. Keypad & Firmware Problem

Yahoo group: PRO-96 (2008 — 2017)
Date: 2009-07-10 05:47:21 UTC
From: Josh D
Topic: 13437 Message: 13437

Hi,

I have had a problem with my RadioShack Pro96. The keypad wasn't working and previously I reset the scanner (pressing a paperclip into the side) and this fixed it. This time it didn't work. While pressing buttons (probably in frustration and can't remember what I did) I
now have the message "All channels locked out!" come up. The keypad still does not work and it won't reset.

I can't initialise the scanner as stated in the instruction book on pg 104 as the keypad won't work.

Has anyone had this problem? Has anyone had error messages with the Pro96 and upgraded the firmware? Has this cleared the problem? I've just realised I'm still using Firmware 1.0 and it worked perfectly with the SAGRN. (South Australia Government Radio Network) Is anyone using a more recent version of the firmware & is it working on the GRN?

Thanks, Josh

Topic: 13441 Message: 13444

Trunking is hard to grasp, and the Pro-96 manual doesn't make it any easier.

First, you have to get away from the concept of frequency = station. Then you have to understand all the control channel/frequency table/base/offset/step stuff. THEN, you need to program all the talkgroups (and comprehend that in this "new order", talkgroup = station).

Other than that, "piece of cake".

OR: You can download a working .P96 file.

13446. Pro 106 0n Sale at Radio Shack

Yahoo group: PRO-96 (2008 — 2017)
Date: 2009-08-03 20:01:29 UTC
From: patrickpope
Topic: 13446 Message: 13446

I noticed on-line yesterday that the Pro-106 is on sale at Radio Shack for $379.99. I decided to take the plunge. Since I have a Pro-96, I knew before I got to the store that nobody at the store would have the foggiest idea about scanners. I could have spent a lot more money for the GRE at HRO, but the guys there are hams and P25 and trunking are not the strong suits for many of the HRO guys either.

So, I am going to buy the Starr-soft software. It looks like there is some sort of conversion tool for Pro-96 files. Has anyone used it? It seems like the concept of the two scanners is so different the translation won't be perfect. Does anyone have files already for the Los Angeles area that I could start with?

I have to admit, I am not a guru on trunking, but I have been able to set up a couple of ICIS closed groups for Verdugo Fire and Burbank PD on my Pro-96. Still I think I am in for an adventure and maybe some frustration as I learn more.

I know there is a Yahoo group for the Pro 106. I am sure they are as helpful as this group has been, and I will start asking them questions too.

We'll see what happens. So far the National Weather Service comes in really well.

I've used the import tool it successfully made a trunking file. I
suspect it could use some tweaking but it works for me.

If "files" means "files on a PC used by some programming package", then it depends on that software. Some software for the PSR-500 family (which includes the PRO-106) will read "files" written by software for the PRO-96.

Topic: 13446 Message: 13453

Hi Pat, You'll be happy with the new scanner. It takes a while to get used to the different concept of scan lists vs banks, but once you get the hang of it, it is well worth it. I'm really happy with mine and will get another when it's time.

I have 2 96's and moved to a PSR 500. I did import the win 96 files into Win 500 successfully. However, over time I found that it was worth importing directly from Radio Reference into Win500 since it sets up much differently than for the pro-96.

My biggest challenge is not having the channel numbers be as significant when using scan lists. With the Pro-96 I have LAPD set up where their channel numbers are assigned to the same channel number in a bank. With the 500/106 the program uses channel numbers in a much less logical way.

If you look at the PSR 500 Group there are some files there for Win500 for LA that include City, County, CHP and ICIS that you can look at and use.

Have fun!

Greg

Thanks Don.

Just like I did a few years ago with my new Pro 96, this evening I downloaded the 500 trial version. I program my Pro 96 with a cable with a serial interface to my computer. That did not work on the 106.

For once I had the foresight to make another purchase with the scanner and I bought the USB interface. Once I downloaded the driver, which took less than a minute I was able to establish a good connection between the scanner and my computer. I imported one of my Win.96 files into the software and everything worked perfectly.

Now comes the learning curve on how everything is supposed to work efficiently in the 106. I know that will take awhile. It took me time to learn how to use V-scanners and how to set up trunking on the 96, so the new concepts will take some time to sink in on the 106.

I am sure the 500 software is at least as good of a deal as the Win 96 software is. Win 96 is a great value, I can't imagine spending this much money on a very complex radio and then not being willing to spend a few bucks more to make it work. The people on the groups are always helpful too. I'm looking forward to getting going.

For everybody who is thinking about the 106, the 96 was at best, poor even with extended frequencies, in the Mil-Air band. The 106 looks like it has the Mi-Air band built in.

Do the dots on the top front of the Pro 96 or Pro 106 above the display mean anything?

Are they in Braille? Hebrew? Morse Code? Some other code?

Are they Radio Shack branding or maybe GRE branding?

They must mean something to somebody.

Pat Pope

I'm guessing no braille as they cannot be touched/felt.

Depending on where you are you can use the pre-loaded v-scanner folders to load the frequencies. Seeing as though the Shack didn't use them I guess your community was not preloaded.

From: newnethboy
Topic: 13470 Message: 13472

Welcome to scanning! You'll either love it or hate it, depending on how interested you become in emergency services. (One drawback is that it's all in real time, not compressed by the news media or Hollywood, so you often have to "wait for it".)

Rick knows the radio in your area and he knows the Pro-96, so his help should be plenty sufficient, but I'll explain a little further some foundational information.

For the century and more that radio has been out there, it has always worked the same way: You want to hear a "station", you tune your receiver to a certain frequency. One station = one frequency. One frequency = one station. (For nit-pickers: I'm disregarding that frequencies have been used by multiple users and that some users have had multiple frequencies, duplex, etc.)

Now, with "trunked radio systems" (TRS), that's all behind us. A "station", or actually a cooperative of "stations", uses a bank of frequencies, and nobody has "an assigned frequency". Rather, each time someone keys a mike, the controlling computer assigns a frequency for this one transmission. The next transmission on the system gets assigned to another available frequency. It's entirely possible for a user within one "station" to transmit on one frequency and for the reply to transmit on a different frequency.

Think of this in terms of a waiting line (for non-US readers, a queue): Registering for a conference, say, you'll often see signs saying to line up "here" for last initial = A-C, "here" for D-F, and so forth. If you're "D" and 90% of the people currently in line are D-F, you're standing there forever while all the other lines have nobody in them.

However, if you go into most banks now, there will be one line, and the person at the front will go to the first teller who becomes available (but it's anybody's guess which teller you'll get).

The registration lines setup is like individually-assigned frequencies. You know what frequency you'll be using, but you might find the system overloaded while other frequencies are going unused.

The bank line is like trunking. You'll get a frequency, but it may or not be your "favorite".

So bottom line for radio receivers is this: You must program the entire TRS, even if you only want to listen to one user. You must have all the settings exactly correct and complete.

THEN you can start where we used to start: You determine the "talkgroup" (TG) for the "station" you want to hear, and make the settings so that you'll hear that TG. (Let's say the TG is analogous to your bank account. No matter which teller you end up at, you'll definitely want your deposit to go only into your account. Happily, any teller can accomplish that.)

I know it takes some "getting your head around", because radio has never been this way before, but once you get it, you'll be cool with it.

=========
Meanwhile, though I can't defend the Pro-96 manual (lame), the bigger part of the problem is that it's talking about things most people don't know. Learn the concepts of trunking and that manual will go from totally incomprehensible to pretty lame.

=========
Rick mentioned the Win96 software: Get it. Use it. "To operate a wheelbarrow, first you have to be smarter than the wheelbarrow", and a trunking scanner is a VERY smart wheelbarrow. Even without a multi-table system, you will really like using this program and really hate manually programming. But without the program and the cable, it is completely impossible to program a multi-table system. (Don Starr knows things about GRE scanners that the manufacturer doesn't know; he's actually smarter than this wheelbarrow.)

You'll want to go to www.starrsoft.com, find the Win96 page, download the 30-day trial, and find the directions to install and configure the software and to install the cable (RadioShack 20-047--no other currently-available cable will work--don't be fooled). To paraphrase from Norm Abrams, "be sure to read, understand, and follow" Don Starr's directions EXACTLY. Doing so will make installation a snap; failure to do so will likely get you hopelessly messed up.

New concept, very steep learning curve, but Oh, what a view from the top! Enjoy!

From: newnethboy
Topic: 13481 Message: 13483

If you can download Win96 (to your Windows computer, need USB support, so that's Win98SE2, Win2000, WinXP, or Vista), download the instructions for installation and setup, get the cable, and follow said instructions (following Starrsoft's directions EXACTLY makes this easy; failure to do so makes it impossible), the rest is easy.

You'll get a premium membership in radioreference.com and then use Win96 to download the trunking system straight into Win96 where you can customize it and then "upload" it to your scanner and "Bob's your uncle".

So easy even a total geezer can do it. ;) But if you still have trouble, get a relative age 10 -18 to do it for you.

13491. Programming wiped out

Yahoo group: PRO-96 (2008 — 2017)
Date: 2009-09-07 15:45:50 UTC
From: Larry Koch
Topic: 13491 Message: 13491

I have recently had six customers that have PRO-06 scanners get the message "all channels locked out." I downloaded the scanner information into my computer and found that almost every frequency on every active band had been changed to 4194.300 and all receive types had been changed to AM. Most of the banks were P25. They were all on the same system but the banks contained different talk groups. One bank contained standard FM systems. They were also changed to 4194.300 and AM.

Any ideas on what may be causing this?

To fix the problem I reload the profile from the appropriate folder.

13495. Pro-96 Sputtering

Yahoo group: PRO-96 (2008 — 2017)
Date: 2009-09-08 11:31:43 UTC
From: jared999
Topic: 13495 Message: 13495

For the last several months my Pro-96 has been sputtering. When the sputtering happens adjusting the squelch does NOT help. The sputtering seems to be at about the same volumes (fairly loud) regardless of the volume setting on the Pro-96. At first I thought it was related surroundings (in the vehicle), but it is happening at home now. I also thought it was related to the rechargeable batteries, but it happens with alkaline batteries and without batteries just plugged into the wall outlet.

-Jared

Does this happen on only one channel, one system, one talkgroup, one type of system or mode, or on all the frequs ?

Try jiggling the ant jack and the earphone jack, and the charging jack to see if it gets worse.

Could be a distant signal breaking up, or encrypted xmissions, or interference from something in your house or auto or on an adjacent frequ.

Do other scanners hear it?

I once had a noise that I heard on my scanner in both my vehicle and at my house. Not until my wife and I switched cars one day did I find it was the remote lock receiver in my car (which is always on).

Also try cleaning off the battery contacts in the scanner and on the battery pack as well. You can use a pencil eraser.

Good Luck

Jack

Subject: [PRO-96] Pro-96 Sputtering

For the last several months my Pro-96 has been sputtering. When the sputtering happens adjusting the squelch does NOT help. The sputtering seems to be at about the same volumes (fairly loud) regardless of the volume setting on the Pro-96. At first I thought it was related surroundings (in the vehicle), but it is happening at home now. I also thought it was related to the rechargeable batteries, but it happens with alkaline batteries and without batteries just plugged into the wall outlet.

It can't be reset over the air. That is done via a selection of keypad entries. You can program via direct connection (clone) or by software.

From: jackandrisin@...
Does anyone know if the 96 can be programmed over the air, or at least made to revert to a previuosly programmed state such as "factory test" etc ?

I agree. I'm thinking there is some strange sequence of events that triggers a glitch that corrupts the memory. So far it is only happening to those that were cloned at the RS store. On the one I did yesterday the owner had already performed a full reset so I was not able to see what was in memory before the reset. I should have paid more attention when these first started happening, but I thought it was maybe their kids playing with it or a single unit anomaly. I'll just keep watching and reprogramming as my customer base expands. :-)

> Maybe it's got to do with an unknown glitch in the scanner's internal firmware which is only triggered by the particular radio system you're monitoring. I heard there was some bug which affected earlier firmware editions of the Pro-96 known as the TG4xxxx bug or something - maybe we have another one of them.
>
> Or maybe the master scanner's memory had developed some corruption over time since you've programmed it. Poor quality flash memory and a variety of other phenomena - low battery during writes, too many writes, static discharges may have corrupted a part of the programming and that might have been cloned over to the other scanners. This error might have affected only a certain part of the programming and only gets triggered when that "part" is needed - so maybe ONE talkgroup is corrupted, sends the firmware haywire which causes it to corrupt the rest, leaving you with what you have there.
>
> Or maybe something went wrong with the serial link during cloning and caused some error to be written into the clones.
>
> I have no idea, but I can tell you, at least in Australia monitoring the NSWGRN here, there has been no issue with mine thus far.

Larry -

My "guess" is that the P25 system in question is the Buchanan County P.S. system.

They rebanded earlier this year.

If a "helpful" Radio Shack employee tried to reprogram the cloning scanner with the new frequencies, he or she may have affected the scanner's programming format.

First thing I'd do is inspect the scanner being used to do the cloning in the store.

Another possibility is that someone bought a Pro 96 ... then returned it due to a problem ... and the salesperson gave them the cloning scanner as a replacement. Yes, stange things DO happen at R.S. sometimes.

Be cautious about drawing any conclusions about what's programmed in the Pro 96, based on viewing a .p96 file or other software file. Extra and incorrect characters, and extraneous zeros can distort how the programming appears when downloaded into a scanner file.

Again ... inspect the scanner at the store.

In reference to a "virus" mentioned by another poster, the correct information is that some early Pro 96 scanners had a firmware problem with monitoring several talkgroups in the 42000 range.

A firmware replacement, which involved replacement of the related chip, was available ... free, if the scanner was in warranty, and $50 if it wasn't.

The problem was NOT related to a virus.

Check your settings for that frequency. Is perhaps attenuation on?

Radio Shack repairs are pretty iffy from all reports. But beyond that, ask yourself if you want to put money into discontinued model or put that toward a new, "modern" model.

So I'm hoping for you that it's a settings problem.

For these three, yes.

The nice thing for you is that you can try one, two, or three of these and, thanks to Don's 30-day trial policy, make sure they work on your Mac before you have to pay for them.

And that possibly could be a problem; I don't know how "really Windows" Windows is on a Mac (probably better on an Intel Mac than on a PowerPC Mac).

Be sure and let us know how it works.

Windows is MUCH better behaved as a virtual machine, at least under
linux and in the VMware environment.

However, Windows does not play well with scanner software when
virtualized. I can't speak for Macs at all.

From the traffic over the last 2 years, the majority of us on this group think there's only one setup worth using:

Win96 software from Starrsoft.com.
Cable from RadioShack (20-047) (although there are probably acceptable equivalents).
.P96 files from this group, local scanner groups, and/or from RadioReference.com (requires premium subscription).

We're pretty much agreed that programming from the front panel is the least acceptable (and in some cases, successful programming is NOT POSSIBLE from the keypad).

This happens on all channels, all systems, all talkgroups.

The sputtering is intermittent, but when it occurs it happens independently of the squelch and volume.

I thought it was just happening in the truck, but it happens at home as well.

I have tried running the scanner off of the AC adapter with the batteries out and it still happens.

I tried running the DSP test, and it failed. I factory reset the scanner, and upgraded the DSP to 1.4 (it was on 1.2). It still has the same problem and is still failing the DSP test.

Any ideas?

-Jared

Mine had the same problem but passed the dsp test. Radio shack service said nothing was wrong with it. I had to get a new pro96.

This happens on all channels, all systems, all talkgroups.

The sputtering is intermittent, but when it occurs it happens independently of the squelch and volume.

I thought it was just happening in the truck, but it happens at home as well.

I have tried running the scanner off of the AC adapter with the batteries out and it still happens.

I tried running the DSP test, and it failed. I factory reset the scanner, and upgraded the DSP to 1.4 (it was on 1.2). It still has the same problem and is still failing the DSP test.

Any ideas?

I don't know what the DSP test is, but if it is supposed to clear the test then that is an indication of a problem. DSP shouldn't have any relation to the squelch but you might have a general problem with the CPU.

When the sputtering happens, open the squelch fully and listen to the signal. Does it change if you switch channel/frequency and what if you remove the antenna?

The Pro96 are very sensitive to external RF, more than any other scanner I've encountered, like if you have a mobile phone on the same table it's registration updates goes right into the electronics in the Pro96 and are heard in it's speaker regardless of volume setting.

Ubbe.

From: Toronto Kris
Topic: 13533 Message: 13534

If you get the scanner shipped to you in Montreal they have to charge you QC taxes on the final destination (if it's a store)

If it's a personal guy selling the radio he owns or on eBay he does not have to charge you taxes.

So a scanner store in Alberta can't help unless your picking it up and you'd still have GST anyway.

Am having problems with Win 96, tried to download something & got a
XML Content error message.

Went to the Win 96 Starrsoft site, saw that there is a newer version
& a mention of the DLL error issue. Did a download of the net
1.1 thru the link provided, followed the instructions for the
install of it, then tried to do an upgrade to Win 96 (I currently
have ver 1.57, latest ver is 1.66). When I tried to download the
current version I get WinZip that lists 4 items, 1 of which is WIN 96.exe
Clicked on it & got an error message:

Cannot find import; DLL may be missing, corrupt, or wrong version
File "WinXXCommon.dll", error 126

Any help on what I am doing wrong would be appreciated.

Brian

Recommend that you go to RadioReference.com and READ, repeat READ, the
numerous posts on this matter, as it has been discussed repeatedly,
on their forums, over the last month, or so, and I don't see the need
for the same circus to be repeated here.

Try re-downloading the program then copy all the files in the ZIP file into the Win96 folder on your computer. I had to do it twice to get it to work. Not sure why I had to do it twice but it works fine now.

OK, still having problems with this. Went to RR & went thru the forums & READ & READ them, most of what I found there was items I had tried but did them again. Still get the DLL error message when I try & start Win96.
Even went so far as to save my 96 files to a memory stick & deleted Win96 (making sure I had my key) & tried a install.
When I click on the Win96.exe file in WinZip-Win96Zip, I still get the DLL error message.

Any help here as to what I am missing in my attempts or doing wrong?????
My guess is that this a DLL or .net Framework issue, not a Win96 problem but I am getting frustrated.

Brian

On the win96 site click "get it" save it someplace.
Make a Win96 directory using Windows Explorer
Extract win96.zip to that directory. Create shortcut to win96.exe
I just downloaded win96.zip and checked it. The dll IS in the zip
and don't run it from winzip

Although I read numerous forums on RR, as well as subscribe to several Yahoogroups related to the Pro 96 / 2096, I'm not familiar with a Win96 DLL problem.

Rather than the "circus" comment, Terry, it would have been useful to provide a URL that readers could start at, or a capsulized version of what the problem might be.

Terry there other people that are realy having this problem with xp and 200 where this issue keeps reapting itself just like my self and i have followed by the letter what was suggested and it still is coming up with Win 96 dll problem. Even after completley removing all aspects of software and reinstall the most recent version of win96.

I believe less comments about the circus atmosphere and actual help
with this problem would solve the current issue.

13550. Re: [PRO-96] Problem with Pro-96: cannot program with cable

Yahoo group: PRO-96 (2008 — 2017)
Date: 2009-10-05 19:55:11 UTC
From: newnethboy
Topic: 13549 Message: 13550

First things to try (for people like me who don't know anything):

1. Turn off at the switch.
2. Remove batteries.
3. Wait at least 15 minutes.
(These steps will not completely erase memory; in fact, they will probably erase/reset nothing, but it's free and harmless to try.)

4. Install new alkaline batteries (will eliminate your batteries as suspects--use your other battery holder, whichever one you haven't been using, to eliminate the battery holder as suspect*).

5. Turn it on, record all that happens.
6. Remove battery holder and connect to power adapter, try again, recording all that happens.
7. Post to this thread what happens.

And a further suggestion: Download, install, and use Win96 software. You can use it for 30 days for free, and it is the only software that members of this group have used with no reported problems or limitations. (Also assuming you're using a RadioShack cable number 20-047, or that you know for sure that the cable you have is a valid equivalent.) It is possible (I can't say probable--don't know) that your software and/or cable has introduced some minor glitch into the scanner's memory.

8. Try reprogramming using Win96 and any .p96 file from this group (doesn't matter what it is, just so you can reprogram your scanner). IF the scanner will go into clone mode now, this step will erase/replace all memory, and should thus eliminate any programming errors.

9. Post to this thread what happens.

---
* Note: The battery holder for rechargeables will work for alkalines; just DO
NOT PLUG IN any power adapter. The yellow battery holder has an extra contact which completes the circuit from the power adapter; it is different in no other way from the black one except color.)

Subject: [PRO-96] Problem with Pro-96: cannot program with cable

Greetings,

My scanner stopped "scanning" the other day. I tried to re-program it with Winstar, but it will not go into "clone" mode when I insert the cable.

Any ideas?

Thank you in advance.

Do you not have the way the scanner was set up backed up into one of the V folders? If not , if and when you get it going and reprogrammed that should be the first thing you do.

Check anyhow to see if you do.

I take it you mean Win 96 program . If you plug the cable in the scanner first then turn it on it should be in clone mode then. I usually open up win 96 first find what I want then just plug in the cable turn on the scanner and upload to scanner. Sorry if this is not any help for you but good luck anyhow.

That's the way it used to work! Now when I plug it in, it does not gointo "clone' mode. I have used the same cable for something else and it works, so I'm not sure the cable is the problem.

As a rule you should charge all new rechargable batteries 24 hours the first charge then 3 to 4 complete dischargeagcharge cycles after that. Then yoi should be good to go.

The question still remains...
How long does it usually take to fully charge the batteries in the scanner (as there is no meter to show battery power remaining).

So, once I have gone through the "training" of the new batteries, how long should I charge them when I first get the "low power" warning? And...would it hurt to charge overnight (5 hours) each and every night?

Thanks for all the help so far, it has been great..

That depends on the nicads ur using and how many amp hours they are and the type charger you are using. Im using an Ultra Rapid Charger / Discharger for the Ni-MH / Ni-CD. It has an LCD display that shows how much of the battery is charged, until its complete.

Hi Art,
Are you using a different antenna when you are out and about, like a mag mount or rooftop antenna ?
Antennas larger than the duckie can bring in sources of interference, or cause overload of the scanner's front end from nearby transmitters.causing poor quality reception.

Are you in an vehicle when out and about ?
If so try turning your vehicle on and off to see if it is the source of static.
Also try moving away from your vehicle even if it is off, modern vehicles can cause interferencer even if off.

Jack

From: jackandrisin@sbcglobal.net
Topic: 13571 Message: 13584

Hi Art,

I am trying to determine what's different when Out and About vs when at Home, other than the location of course.

1 I understand that you are using the factory Duckie antenna everywhere, is that correct ?
2 It sounds as if you have bad reception everywhere but home. Is that correct? If so, that is very strange.
3 Is "home" at a higher elevation vs everywhere else ?
4 When out and about, does it make a difference if you are close or far from home?
5 Does poor reception happen all over the county or just certain places ?
6 When you have /vs/ dont have/ bad reception are you on battery power or AC mains ?

Good luck,
Jack

I have been very satisfied with batteries ordered from
http://www.all-battery.com/

They have good prices on batteries and several chargers that come with cords
that allow you to charge batteries from your vehicle.

to answer your questions

1. i am using an 800 mhz antenna

2. yes that would be correct

3. i don't think that my home is higher then other locations

4. no difference being far or near my home i still have the same issues

5. all over no change in what location or state i am in

6. i am on battery power i only use ac power at home

Perhaps there's some issue with the current coming from the batteries?
Do you have the problem if you operate on batteries at home?

Hi again Art,

Referring to your answer to Harry's question:

1. I understand that when you are at home, and using only battery power, the reception is ok. But when out and about, and using only battery power, the reception is bad. Is that correct ?

2. As Harry mentioned, if you are using the AC mains when at home, the problem could be with weak batteries. It also could be dirty battery contacts, or that your charger is not charging the batteries--usually a problem with the DC power cord tip or the the DC jack in the scanner.

3. When out and about, does the reception immediately go bad, or is it only after a while? (Weak batteries ? Or battery contacts need cleaning ?)

4. When out and about, is the scanner on your belt vs sitting on a table when at home ? (If so try turning slowly to see if your body is blocking the signal except from one direction.)

Jack

Anybody in Ontario using the pro-96 for Fleetnet zones 1&2?

I am reprogramming my Pro-96 and was wondering if it is of any advantage to use the extended tables and add all 3 custom tables
ie: BASE SPACING OFFSET
1 141.015 15.0 380
2 151.730 15.0 579
3 154.320 15.0 632

in the past i've only used the #1 setup what would my advantage (if any) be if i programmed all 3 combinations?

2nd question, if it is better to program all 3, then do i change from system setting from TABLE to MULTI-TABLE ?

thanks to all in advance for any help you can give me on this..

Have you confirmed that you have the correct table setting(s)? If one value is wrong, you'll have issues.

There are three different flavors of firmware for the Pro-xx96 scanners, each with a specific patch.

But depending on your particular problem in Montreal (CN I presume), some of it may be encrypted (can't be decoded) or you're getting too much signal (try the ATT feature). If you go to MAN mode on the active control channel, it will tell you the decode rate in percentage. This line of radio is easy to overload, which will lower the decode rate (less antenna or the attenuator). I didn't look up the frequency range used, but other common issues are multipath (getting multiple copies of a signal at almost the same time from one or more sites) which will lower the decode rate or phase distortion (parts of the signal arriving at different times because of path variations) or one site blocking another (poor system design). And yes of course low signal level is common too. You'll have to figure out what the cause is so you know how to compensate (more/less antenna, directional antenna, scanner controls etc.). Good luck.

Hello Group

I am new to this group but have been scanning for years.
I posted this message to the 96-2096 groups and I though
I will also post it here.

I just got a used 96 and am having problems with no audio
when the scanner stops on a channel in the trunk bank.
The audio work on the bank that has conv. frequency (154.755).
I also have a 2096 and program it with win96. I used the same
file for the 2096 to program the 96. Both scanner will stop
on the same channel and talk-group, but no audio from the 96.

thanks John WD8RTH

Topic: 13612 Message: 13614

Yes. You'll get this sort of thing if the control channel alerts to a transmission but your scanner can't get to the correct voice channel, as in you have the trunking system incorrectly configured.*

Be aware that there are settings that you can only enter correctly with Win96 software (e.g. multi-table frequency ranges), and you might receive voice on one radio and not on another that SEEMS to be configured exactly. (In fact, when I first attempted to receive the So Cal ICIS system, it wouldn't work. A friend sucked out my setup into Win96, changed nothing, and pushed it back into the radio, and it worked fine! He runs a radio shop but still had no idea why that happened.)

---
* There is also the phenomenon with any digital radio/TV that below a certain threshold of signal strength you hear/see nothing. It's possible this is what you're experiencing, but I doubt it.

i had the same thing happen 1 time with the Ontario Provincial Police (Canada) Fleetnet System... make sure the system is set to the right system (Mot/Ed) and your table frequencys & settings are correct and set to either Normal or Table.

13616. VHF Digital Trunked Systems

Yahoo group: PRO-96 (2008 — 2017)
Date: 2009-11-09 23:19:37 UTC
From: Gary Johnson
Topic: 13616 Message: 13616

In VA the State Police are going to a VHF digital trunked system. I have an extended table that I use in WIN96 to program my scanner. Up until now all of the control channels have been 15X.XXXXX mhz frequencies and my scanner works fine. In the past couple of weeks they have added some towers where the control channels are 161.XXXXX mhz frequencies. When I add these new frequencies to my WIN96 files, WIN96 rounds them off to 161.XXX.

Is there any setup I can use to program the new frequencies or have I just reached the limitations of my Pro 96?

Gary

Hi all I have bought my 2nd PRO-96 scanner this one I got from Ebay and the man I bought it from has his name address in the welcome screen and I have been looking in the owners manual to find a way to change that to my name oops I don't see that in there.
Is there anyone out there that can tell me how to change the welcome screen? I will have to tell you up front I can't do this with the help from my PC because I have windows XP I do have the disk from the first radio I got and the pc cord, oops can't use that on this laptop so I will have to do this by hand unless there is someother way.

You can change a lot on the Pro-96 with Win96 that is impossible to change any other way; this includes the welcome screen.

To use Win96, you need Windows (pretty much any 32-bit version--which includes XP) and a RadioShack cable 20-047 or exact equivalent. (If you don't have a USB port on your laptop, you can scare up a serial cable somewhere, but that won't be a total snap.)

Follow the directions on the Starrsoft site EXACTLY to install the software and cable; "exactly" makes it easy, "not quite exactly" makes it exasperating--WTTW.

BTW, having one's name on the welcome screen is not a bad idea, but a better idea is this: Put on it "STOLEN FROM" and your state and driver's license number. Reasoning: If it says right on it "stolen from", that constitutes "probably cause" for LE. Using your DL means the thief can't say his/her name is the name on the screen, but the LE can get your name, and thus can compare <owner/DL holder> to <thief's alias>. (Better yet, engrave same on the case.)

Ok 96 owners. My 96 has been updated with the latest firmware from the Radio Shack site however I am having an intermittent problem which is unexplainable-

Every so often the keys will lock up when the unit is cold. No functions whatsoever except it will scan and receive audio.

Sometimes it takes well over an hour and then the unit beeps, lights up and returns all keys to normal.

I also noticed my #7 key will not work at times and the bank 7 will occassionally lock itself and the unit returns to freeze mode.

Then at other times it functions normally. I reloaded the new firmware a few times but this still happens.

Anyone else experience this lock up scenario?

I haven't had this problem with my Pro-96, but on various phones with keypad-in-handset, and with at least one TV remote, I've had problems with a build-up of skin oil behind the one-piece-rubber keypad. (Your report that it's worse when cold hints that this could be your problem; also the non-working key.)

My efforts to clean have ranged from successful for a while to ruined the whole thing. In most cases, though, some success can be had by wiping the back of the rubber pad and the underlying circuit board (I'm assuming that's what's there--never had mine apart) with a Q-tip. Change to a clean Q-tip frequently. DO NOT rub hard. Also helps to wipe the key side of the rubber piece.

NOTE: I learned the hard way that using alcohol can destroy the electrical conductivity of some rubber pads. (A new VCR was only slightly more than a replacement remote, and forget parts!)

And a note to others who have not had this problem: Keeping the unit clean delays or even prevents this problem. Frequent dry-wiping helps. Oh, and I now have a leather case, and it has a clear window over the keypad (just don't let stuff accumulate behind the "glass").

Your looking at the wrong connector. If your computer has a serial port, it should be a 9-pin MALE with pins on the computer. If you see a female connector on your computer, it is a 15-pin VGA connector for a monitor, not a serial port.

You need a USB-to-serial adapter that will give you a connection that you can use with your programming cable.

Dale, what cable did you buy, and what are you trying to do with it? I'm assuming you're trying to put the Pro-96 on one end; what on the other end? A computer? If so, what kind of computer, and what kind of connector?

Chris' reply shows the problem with your question; he's guessing at what you need because you haven't given enough information for anyone to be able to help you.

There is no difference in demo except that operation without a purchased key will time out (stop) after 30 days from install. On the presumption that you're using the latest version, more than likely your issue is with RR. You DO need a subscription to RR (it is a separate entity from Win96).

If worse comes to worst, you can manually enter your data into Win96 and then use that file (once saved) to program your Pro 96. That is what I have done and it (while tedious) works fine.

If you can be more specific about your programming issue, I'm sure there is someone on this list that can advise you. Downloading from RR has been one of those covered here before (I don't do it, so I can't advise).

Win96 also adds other features that cannot be managed by other software or manual programming, such as custom (multiple) tables, expanded frequency range, low battery alert voltages and a few other things. It's WELL worth the $30.

Yes it was a guess on my part, but it was based on numerous previous questions about trying to adapt the 9-pin connector on the programming cable to the 15-pin on the computer!

Perhaps we could back up a step or two and eliminate - or at least bypass for the moment - RR as part of mrthorfox's problem.

There must be someone either on here, in the Ohio RR forum, or on an Ohio yahoogroup, that could email mrthorfox a copy of a known *WORKING* p96 file for Butler County and he could open it with his Win96 and upload it to his scanner. At least he could see if his Win96 works. After that he/we could try to track down the issue between his machine and the RR download site.

Date: 2009-12-16 19:04:33 UTC
From: jeff
Topic: 13656 Message: 13656

I anybody successfully monitoring a 700 trunked system on their pro-96?
My area is switching the whole county over to that, and I need to be able to monitor with this or get a new radio.
The control channel is 769.75625
I have Win96, and have newest firmware, but not sure about the extended tables and such.
They are in testing mode, I have CC in and get standard CC tones, but have not heard the voice tests that others have on other scanners.
Thanks if you have experience in this area already.

I didnt think the Pro-96 could fully TRUNK a 700mhz freq (as its not even in its original set of included frequencies - only added via the extended frequencies of Win96). But I maybe wrong.

>Time to ask Uniden to do a firmware update so we can trunk 700's.

That would be futile for two reasons:
1. The PRO-96 does not have upgradable firmware
2. Uniden didn't build it

The PRO-96 will never trunk 700MHz systems (those systems with control channels in the "700MHz band").

Guys the Pro-96 hardware is fairly outdated hardware while I still love the radio move on and give the Pro-106/197 a try they not only track 700Mhz control channels but also monitor ESK systems also both which we have locally.

And along that line: I just saw where some public service trunked system is "EFJ", which I believe is E.F. Johnson. I know the Pro-96 does not support it; does any current digital/trunking scanner support it? Which?

Same here. I'm glad I bought the Pro-96 when I did, but the fact is, this scanner is not going to wear out before it becomes obsolete.

1. It doesn't do 700MHz.
2. It doesn't do EFJ.
3. It doesn't do EDACS digital.

A "perfectly good" computer that won't run WindowsXP or better, or won't run MacOS X, or won't run a current distro of Linux is nothing more than a doorstop. In the same way, a scanner that won't receive what you want to receive is nothing more than a paperweight. In either case, buy a new one that works for you.

Thankfully, there are none of the above systems in my area (that I care to monitor), a very good thing since my scanner is only three years old. But before my Pro-96 gets to be eleven years old like my Pro-23, I wouldn't be surprised to find some system switching to something I can't receive and my "perfectly good" Pro-96 being "promoted" to paperweight. For many on this group, that time is already here.

I hope, though, that the time of major flux in radio comms is temporary, and that the next generation of scanners, if not the current models, will be capable of everything that's out there, and good for some time to come.

Several scanners support Logic Trunked Radio (LTR Standard) if that is what
you're asking.
Not LTR Passport or LTR Multi-Net .

Thanks, Clark. After asking that, I found a good run-down (I'm assuming it's accurate--don't know enough to tell) on the different systems and which scanners (if any) do them:

http://nf2g.com/scannist/

Click on Trunking, and at bottom, select a trunking type.

13675. dll & .NET problems

Yahoo group: PRO-96 (2008 — 2017)
Date: 2009-12-19 18:37:40 UTC
From: Brian Verhalen
Topic: 13675 Message: 13675

I tried to download something from RR (I am a subscriber) & ran into some problems of not everything showing up on the download pages from RR, & things hanging up.
Went to the WIN 96 site & saw the "need to download Microsofts ".NET Framework 1.1"
Clicked on the link provided, did the download & install. The install made it to almost the end of install, but stopped short of complete, then did a "rolling back action" & gave me the message that setup had not completed.
Went to Microsofts framework site & did the troubleshooting things it suggested & tried the install again, with the same results.
After numerous attempts, I did get it installed but on the restart I got a message that SP1 was needed, so did that download & install.
On the next restart I got a message that in order to run framework I needed V2.0.50727
Went back to the framework site & looked through the FAQ site, the troubleshooting site & did not find a complete answer to the V 2.0 issue.
Bottom line after all of this is that I still cannot get RR to work right or install the latest ver of WIN96 (I am 1 ver back from the current ver, & I get the missing/corrupt dll message).

I am on a PC, with XP pro & browser IE8, both of which have the current updates.

Sorry for the long description, but does anybody have any idea what if anything I am either doing wrong or need to do to get this completed? I did un-install .NET 1.1 & tried ver 2.0 & its SP, but things still do not work.

Thanks for any thoughts & help.

Brian

Try leaving versions 1, 2, 3 and 3.5 installed and updated. For some retarded reason (poor code writing is one reason) some software needs exactly the proper version they are expecting. The answer is to test for a version greater than the minimum version with the features you need instead of a specific version (and if .net doesn't allow that, then you know where to look for blame).

By leaving all versions installed, you minimize the chance of an error. It isn't space or memory expensive so you won't notice it.

That message you're getting in Win96 means you don't have the right .NET configuration. And you need the .NET to update Win96 and you need the current Win96 and .NET to download from RR and I wish people didn't keep having "better" ideas where I have to keep updating stuff that has always worked flawlessly.

Try what Rick said and keep every version of .NET installed. Might work.

I have all the .net version installed and updated. It was an ugly process, even considering it is a Windoze OS. There are help pages on their site concerning this, but my memory is vague on the details (use Google, search the error). I think you have to uninstall (all versions), then use regedit to clean out a couple lines (VERY DANGEROUS). Then reboot (just because it's MS-ware) and try the install again. Do NOT simply run it from iexplore, download it and run it from your hard drive for some stupid reason, it matters. Then you can install 2, 3, and 3.5 although I doubt the order is any problem. I'd suspect that win96 requires 1.1, that was current when it was created, but Don may interject here.

And if you think that's difficult, try cleaning up the mess Norton leaves behind when it barfs and won't let you [un]install (their typical mode of 'fixing' things).

I go back before the days of a cassette (a whopping 1200 baud transfer rate into a 4k memory) based OS for Heath computers (~1978), then HDOS and CP/M (predecessors to MSDOS) and have run every version of MS OS since then (except Vista because I'd lose some still functioning external hardware and Windows 7, same reason). Trust me, I understand your frustration. Bottom line is that it's a wonder it works at all.

Rick WA6NHC

www.HappyMoosePhoto.com

Wildlife and scenic images

From: Brian Verhalen
For whatever reason, regardless of the order or anything else, 1.1 does not want to finish the install setup. It downloads & does almost make the end of the install before stopping & giving me the setup failed message.
I did install 2.0 3.0 3.5 & their related SP's, & then tried to install 1.1 again but still got the same results.
I tried WIN 96 again but got the error message:

Cannot find import, DLL may be missing, corrupt, or wrong version
File "WinXXCommon.dll", erorr 126

Windows XP had an update issue with the NET.framework software doing an improper update about a month or so ago. It usually isn't noticed until you try to run software that requires one of the NET. framework files to run.. There is a fix available from Microsoft that involved downloading & running a cleanup utility - just search Microsoft for "NET.framework issue" and download the appropriate software. Then run Windows Update, select "custom" instead of "automatic" and select all the NET. framework installs to reinstall. This should fix your issues. If not, run the uninstall software you downloaded again, and then MANUALLY install all of the NET. Framework software, starting with 3.5 and working youe way down to 1.1. Once you ahve a succesful install, run Windows Update One More Time, to get the updates to the install. This fixed my issues (with a bit of headache and work), but once fixed, the problem SHOULDN'T reoccur (we hope!!).

Here are a couple of links related to this topic:
http://support.microsoft.com/kb/923100 deals with update issues
http://support.microsoft.com/kb/908077 deals with corrupt files
http://support.microsoft.com/kb/922377 deals with update issues also

There are also other links on the webpage.

As I said, it took me 2 tries to get this issue fixed, but with patience, you can clean it up and successfully install it - once done, your NET.framework issues will be resolved.

Let's check out some things:

1. Remove the battery pack. Plug in A/C power. Does the scanner power-on now?

2. Remove the batteries from the battery pack. Using the black battery pack, load in four known-good non-rechargeable batteries (e.g. alkaline). Does the scanner power-on now?

3. Visually check each of the batteries you had in during the charging. Do you find any discoloration, deposits, etc.?

4. If possible, check the batteries you had in during the charging, to see if they produce adequate voltage. You should show at least 1.2V under a slight load for each battery, or they should each read well into the "good" range if you're using that kind of meter. (You can also put them, in pairs probably, into a flashlight or other device that takes a lot of power, and see if the device works right.) What do you find?

One possibility is one or more bad batteries.

Another possibility is that the bypass switch in the power jack is stuck. (If so, test 1 above will show power-on.)

Another possibility is that your A/C power supply has failed.

I'm sure there are more possibilities.

There are lots of scanners that support it if it's LTR or P25. If it's
another EFJ system type, you're out of luck, as no scanner supports it.

It will power on it just wont pick up anything not even on police/fire
search mode. When i put it on a frequency i programed in and there is
something said it makes an odd sound. when i push scan and wait a few
seconds and push man its still on the same frequency it wont scan at all.
Any ideas?

Thanks

You can try reloading the firmware (if you have it) and reloading the programming load.

I had ths same problem. It turned out to be the yellow battery holder terminals were somehow not making good contact. Try cleaning the contacts with a good contact cleaner. Also as mentioned switch to the black battery holder using known good batteries

Let's check out some things:

1. Remove the battery pack. Plug in A/C power. Does the scanner power-on now?

2. Remove the batteries from the battery pack. Using the black battery pack, load in four known-good non-rechargeable batteries (e.g. alkaline). Does the scanner power-on now?

3. Visually check each of the batteries you had in during the charging. Do you find any discoloration, deposits, etc.?

4. If possible, check the batteries you had in during the charging, to see if they produce adequate voltage. You should show at least 1.2V under a slight load for each battery, or they should each read well into the "good" range if you're using that kind of meter. (You can also put them, in pairs probably, into a flashlight or other device that takes a lot of power, and see if the device works right.) What do you find?

One possibility is one or more bad batteries.

Another possibility is that the bypass switch in the power jack is stuck. (If so, test 1 above will show power-on.)

Another possibility is that your A/C power supply has failed.

I'm sure there are more possibilities.

take it to radio shack and have them send it back - mine did that this summer and I sent it to a private shop I had used before and they couldn't fix it - suggested it was a processor problem -and to send it back to RS - Local store was very helpful and it came back in 3 weeks and is performing better than when I got it - no charge

You may want to check with Radio Shack - THere is an update available to downlaod & install on their website for the PRO-96, and also a way to "reset" the scanner. This MAY help cure your issue - otherwise you may need to take it to your local shack & see if it can be repaired (if none of the other suggestions fixed your problem)

This list is for discussion about anything related to Radio Shack's GRE built PRO-96 Digital capable Scanner. This includes Any and all Software for the PRO-96. You can also place your p96 data files for WIN96 software in the files section.

We are the official recognized List by both GRE America, and Radio Shack, And Starrsoft software For the PRO-96..... Several Members are on this list and Our Sister List.

Thanks for your support

Hello board. I need help in finding a place to fix my PRO 96 as the scanner won't scan anymore. Opened it up and the BNC connector needs repairing as the soldering has broken up. I live in the Norfolk,VA area and would like to know where to take it as I don't want to mess up the scanner. I would rather have it done professionally. Thank you in advance.

I just did this last week on a PRO-96 with the same problem. You have to unsolder the metal shield to access the joint. There are 2 halves with a solder joint on the top joining them both. Unsolder this area then unsolder the right hand side of the shield. You can then bend the top half of the shield up and back to get at the connection. It is a very tiny spot on the board, but with a steady hand and a drop of solder, it will fix up nicely. Bend the shield back down into place and re-solder the 2 spots and you are good to go.

Any radio/TV repair shop or the local Radio Shack store can help you.

From: Steve
Topic: 13708 Message: 13708

I have waited very patiently to upgrade my computers ram from 1 gig to 4 gigs. I have also needed to run windows applications on my computer to program my police scanners. The software in question can be found at

http://www.starrsoft.com

The fourth software application the Pro96/Pro2096 digital trunking scanner. The fifth
software application listed for the Radio shack Pro164. And the seventh software application for the GRE PSR 500.

Can I run these applications with virtual software? Or must I purchase, and install windows?

There have been some posts here, I believe, reporting success at running Starrsoft products on Windows w/in MacOS X.

But the bottom line is that these are Windows applications and yes, you need Windows. You also need the RadioShack cable, stock number 20-047, or somebody else's equivalent.

Depending on what software you are running, it may be possible. Both Apple and Linux have software that is available that will allow them to run certain windows programs. However, the Starrsoft software relys on the .NET Framework software that is a part of Windows, so unless these software packages are able to run it, or something similar, I am doubting that you can run these without Windows. But YNK.

Good luck

There's also the matter of interfacing with the cable, even if the software works.

However, this theoretical discussion has kind of been trumped by Frank's report that he's actually running it.

Virtual box, with a copy of XP (easily available) and a programming cable, no sweat, done it several times on Linux Machine.

13715. Pro-96 for sale

Yahoo group: PRO-96 (2008 — 2017)
Date: 2010-01-31 18:16:03 UTC
From: rjcope_98
Topic: 302 Message: 13715

Hi All, looked for an area to post my 96 for sale, but didn't see one. I don't really want to offer this radio up to the general public with the sensitive programming in it(US Marshals, DEA, KBI). These guy really talk in Wichita and surrounding areas. I'd much rather sell it to someone who really appreciates great scanners, so I posting it here first.

I have a pro-96 in excellent condition, with box, both batt. packs, books and it's already programmed for Central Kansas and everything current in the KSICS System. paid $499 new, asking $350. Leave message here or email at rjcope_98@...m. thanks in advance - RJ

13717. Red Bull Air Race

Yahoo group: PRO-96 (2008 — 2017)
Date: 2010-02-01 01:48:01 UTC
From: ve3pho
Topic: 13717 Message: 13717

Would any one have frequencies for the RED Bull air races that take place in the Windsor/Detroit area, we are planning on going this year & I thought I would take some scanning equipment.

Looked through the files section did not see many air lists, I have a Pro-96 and a 396T

Thanks for any help

Sorry, after "sharing" other files on these Yahoo groups, my mailbox has been flooded with spam e mails, and cheap skates who want free programming. I paid for the scanner, I paid for the software, I took the time to make these edits and don't appreciate moochers. I didn't offer any programming, I was taking a chance on some righteous person wanting a good deal on a preprogrammed scanner, nothing else. I didn't see any rules here saying I have to hand out my hard work to lazy bums!

Wow. What a terrible attitude to have toward your fellow scanner listeners. Some people just want the thing to work. Some people can't grasp the complexities of the newer programmable scanners. It doesn't make them lazy. There's no harm in helping them. I could say the same thing about anyone that uses software over programming by hand. I do all my programming by hand, and I use the software mainly for backup and for the certain features that are software only. If you've already done the work, there is no harm in letting others copy it. It's not like you are making money off of your .p96 file...

From: Michael Grossman
Topic: 13729 Message: 13729

So, overstock.com has it for $225 refurbished. The 2096 is $189.
$350 seems kinda overpriced if you ask me

This list is for discussion about anything related to Radio Shack's GRE built PRO-96 Digital capable Scanner. This includes Any and all Software for the PRO-96. You can also place your p96 data files for WIN96 software in the files section.

We are the official recognized List by both GRE America, and Radio Shack, And Starrsoft software For the PRO-96..... Several Members are on this list and Our Sister List.

Thanks for your support

Group Contact, subscribe & unsubscribe info:

Post message: PRO-96@yahoogroups.com
Subscribe: PRO-96-subscribe@yahoogroups.com
Unsubscribe: PRO-96-unsubscribe@yahoogroups.com
List owner: PRO-96-owner@yahoogroups.com

Also, Our sister Group RS_GRE-Digital-Scanner@yahoogroups.com is available for People who want to talk about any of the Radio Shack GRE built or planned Digital capable Scanners.

Please enjoy the list....

Thanks

Brad, the Win96 software works for 30 days when you download it for the first time. After 30 days you have to register it for it to continue to work. Now I'm not sure of your financial situation but $30 is not a lot of money to register this fine software. For all it does, it's worth more. As far as sharing it, It cannot be shared because everyone has their own registration key. I don't believe anyone will give out their key. You mentioned other sites.... I only know of one site to download win96. Here's the link...

Agreeing with Carleton, Mac.

I joined this group about a year after I got my Pro-96 and right after my local system went to digital trunking (which made me thrilled that I'd bought the Pro-96 instead of a cheaper scanner). At the time, I knew not one person who had a scanner (nor did most I knew know what a scanner was!). When the local system just wasn't there anymore, I didn't know what to do. It was this group and SoCalScan where I learned how to program my Pro-96/local trunked system.

In the two years I've been on here, this is the first time I've encountered the attitude that threatens to scare you away.

Look, we had one person on here last week get all negative, and he drew some flak that IMHO he well-deserved. As I said, this is the only such incident I've seen in just over two years. What I've seen instead has been a once-steady stream of friendly and knowledgeable help. The volume of messages/help requests has tapered off now that there are few new users, but quality or friendliness is unchanged.

So don't be afraid to ask your questions. Many members here are very capable of helping you, and some are radio geniuses.

I DO NOT recommend any of Don Starr programs (WIN-XXX).

There are better programs out there. take a look at ARC-96 or Pro96Com

ANYTHING but Starr software!

However, the vast majority of us in this group disagree with Scott on this; some vehemently disagree.

One only has to look back through the archives to see how many love Win96 and how many prefer something else.

My personal experience is only with Starrsoft Win96 (and with Don Starr's comments on this group), but I will say I'm 99.999% satisfied with the software itself and with the support.

However, the vast majority of us in this group disagree with Scott on this;
some vehemently disagree.

One only has to look back through the archives to see how many love Win96
and how many prefer something else.

My personal experience is only with Starrsoft Win96 (and with Don Starr's
comments on this group), but I will say I'm 99.999% satisfied with the
software itself and with the support.

Brad, the Win96 software works for 30 days when you download it for the
first time. After 30 days you have to register it for it to continue to
work. Now I'm not sure of your financial situation but $30 is not a lot of
money to register this fine software. For all it does, it's worth more. As
far as sharing it, It cannot be shared because everyone has their own
registration key. I don't believe anyone will give out their key. You
mentioned other sites.... I only know of one site to download win96. Here's
the link...

http://www.starrsoft.com/software/win96/default.asp

Brad as has already been mentioned your Pro-96 is not designed to receive 700MHz control channels you would need a Pro-106 / Pro-197 or others for that.

Hi Joe M.,
it`s Brad again. I installed the free trial of  Win96 but I do not know how to obtain the 700 mhz freqs. and put them in my scanner from the program. I do not really know how to use the "extended frequencies" option nor do I know how to use the Win96 software itself. I`m stuck. Please help and explain to me how to work it. I would really appreciate it very much. Thanks

What "other" sites? The only official place to get it is at starrsoft.com. It's $30, and the price is payment for Don Starr, who developed the software himself. I don't think you'll get many takers here in regards to obtaining the software illegally. It's well worth the $30.

It's really easy. Just open it and try anything, anything at all. If you make a mistake, so what.
Just start over. Don't be timid. Win96 is a great program.

Having downloaded and uploaded just fine several times on this computer, and having just successfully downloaded from the scanner, I'm not able to upload a file just now. I keep getting the following error:

Error: Access violation at 0x00434ACB (tried to write to 0x4468F045), program terminated.

Can anybody tell me what's wrong so I can get away Friday with a working scanner?

Solved--or at least delayed.

I closed a couple of other programs (both of which are new since I last uploaded to the Pro-96), and it worked fine.

(BTW, I see that I failed to note this was Win96 to Pro-96.)

13788. 2096 decoding problem

Yahoo group: PRO-96 (2008 — 2017)
Date: 2010-02-17 22:12:40 UTC
From: jimdean002
Topic: 13788 Message: 13788

Hi,

We've got a 2096 that has run into a problem. It receives non-trunk traffic fine, but has an issue with the APCO-25 system here. It worked fine for years, but just quit decoding one day. I can put it in Manual, and put it on the control channel, and it comes up with the display where it should show the percentage, but those boxes stay blank. Not a low number, just dashes, like it's not decoding.

I have another 2096 that's an identical clone, which works just fine when hooked up to the same antenna and power supply, showing 98 percent and not missing a beat. Hook this one up, you get nothing.

As I say, it's receiving the control channel, it's just not decoding it. And yes, it's set to MO. I've tried resetting it and re-cloning, with no success.

Just wondering if anyone had experienced this?

Jim Dean

Another way to be able to become a "premium" subscriber is to host an online scanner with radioreference.com. Have an old trunking or conventional scanner that you don't use anymore? That, a PC, and a steady Internet connection is all you need.

It's also a great way to let your "out of area" scanning friends listen in to your area.

Happy scanning!

Jason

This particular cable has a little box in the middle with a circuit board in it. I'm not sure what the box does, but it's apparent that a simple cable won't substitute for this one.

> won't substitute for this one.

The GRE 30-3290 / RS 20-047 cable has a USB-serial converter in the "little box".

A simple serial cable (i.e. straight from a PC's serial port or other USB-serial adapter to the scanner's PC/IF port) won't work because of the voltage levels and polarity used on the scanner's port.

Here's how a typical '232 connection would work; for example, from a PC to some device that supports '232:
1. PC's serial port (or a USB-serial adapter):
a. takes data to be sent and converts to a bitstream whose levels are 0V and 3-5V
b. contains a circuit/device that converts the signal to '232 levels: inverts them and converts them to -12V / +12V (nominally)
2. Straight cable that connects PC serial port to device's serial port
3. Device's serial port:
a. contains a converter that converts the '232 levels back to 0V to 3-5V, inverted
b. takes the resulting 0V - 3-5V bit stream and converts it back to bytes of data

The PRO-96 (as well as any other GRE-made PRO-xx scanner since the PRO-92) doesn't have the level converter in 3a. This why a "simple cable" won't work.

There used to be cables available that would perform step 3a (e.g. RS 20-289), but most (if not all) are no longer available. Some people make their own. These cables attempt to perform the 3a conversion internally. Unfortunately, these don't always work well and can be subject to failure on some serial ports (because they're usually powered by the host '232 port's DTR and/or RTS lines).

The GRE 30-3290 / RS 20-047 cable skips step 1b (thus eliminating the need for step 3a): the 0V / 3-5V signal from the cable's internal USB-serial converter is never changed to '232 levels; instead, it's left at the polarity and levels expected by the scanner.

Can you trust the mail system (not FedEx or UPS)? It might be slower, but it should be much cheaper. As GRE is not an American company, perhaps there is a better source for your part of the world (which I hope to see some day).

GRE's unit price is less. Maybe check with them for shipping options:

https://www.greamerica.com/shop/cgi-bin/cp-app.cgi?pg=prod&ref=scan006

(The GRE "store" below doesn't seem to provide an option to ship anywhere but the USA. However, a message to them via one of the contact links on the the http://www.greamerica.com site might yield more info.)

I don't know that I'd recommend eBay seller "cmdradio".

Last summer, with some PRO-96 and PSR-500-family radios he was selling, he was including:

* The PSR500DL and PRO96COM programs
* Registration keys for software (i.e. multiple copies of a single key)

After one of his customers contacted a software vendor, that vendor contacted eBay. The offending listings were promptly nuked.

Not sure how you see this as simple. DB9 <--> scanner cable has internal circuitry just as does the USB <--> scanner cable. In either case you need a custom cable. With DB9 you need to configure the port correctly; with the USB cable, you need to hypothecate a serial port.

Seems pretty much the same to me.

You should be able to go to any local Radio Shack and have them order you one through Radio Shack Unlimited (RSU). I ordered a replacement belt clip that way. They can call up that scanner on their store computer and see a list of parts for it, order the part you want, and have it shipped right to your door. I did that for a replacement belt clip, and received it in less than a week.

You can also call RSU yourself, though I have misplaced the phone number.

Look back through the archives, as this number has been given here a few times.

I sincerely hope this approach works for you; when I tried to get a replacement belt clip a couple of years ago, I got absolutely nowhere, in either of two stores, via the 800 number, nor by email to the company brass (and I bad-mouthed them here and haven't been back to a store since)--never did get the clip (bought a leather case from ScannerMaster, and have been wondering since why I hadn't done so sooner).

13834. Teddy Message

Yahoo group: PRO-96 (2008 — 2017)
Date: 2010-03-09 15:17:11 UTC
From: Pat Pope
Topic: 13834 Message: 13834

There is a chance that in your stack of e-mail today you will see a message that I or someone else that you exchange messages with is "sending you a teddy".

DO NOT OPEN IT! DELETE IT IMMEDIATELY!

This message propagates itself by copying all or part of your Outlook or other e-mail address book and it will send the same message to your contacts. It will look like it came from you.

I got the message from a trusted friend and wham it went to a whole bunch of people.

I am sorry for the inconvenience. My friend is sorry too.

This has the potential to spread quickly, so you may get a similar message from somebody you know other than me.

Pat Pope

From: Pat Pope
Topic: 12172 Message: 13835

I got hit last night by this bug, and blasted every thing in my directory with the message above. It looks like the original "Teddy" message did not hit this group. What a pain.

Pat

I was lucky and got a store manager that knew about RSU and how to use it. Unfortunately, many Radio Shack employees never heard of RSU; will not know what you're talking about, will claim they can't get any such parts, or otherwise give you incorrect information. You may have to keep searching for one who can help you get what you want.

Ken

Look back through the archives, as this number has been given here a few times.

I sincerely hope this approach works for you; when I tried to get a replacement belt clip a couple of years ago, I got absolutely nowhere, in either of two stores, via the 800 number, nor by email to the company brass (and I bad-mouthed them here and haven't been back to a store since)--never did get the clip (bought a leather case from ScannerMaster, and have been wondering since why I hadn't done so sooner).

Absolutely. Put the antenna up as high as you possibly can.
I used LMR400 cable... it's expensive but low loss. It's also about
1/2" thick :)

There are some really interesting discones out there for listening to
the entire range you can receive.

An outside antenna can be helpful in some situations. With the 96, however, you need to be careful as it is prone to front end overload. More antenna can actually give you less than the desired effect with the 96.

If you are monitoring a certain band perhaps try a band specific antenna on the 96 itself and see how that works for you. Even if you are monitoring multiple bands a better quality wide range antenna may work for you as well.

Good luck!!

I've got a couple questions. Is cable TV cable good for an antenna. I've got a whole roll of good quality stuff and want to make a long run up to an antenna tower that's 50 feet tall. I'll likely need 100-150 feet total to get it into the house. The cable tv wire I was told would be perfect for this task. It would be far cheaper as I already have this in quantity but if it's no good for a scanner.?? I'm using around a 50 foot piece of this a cable tv wire now and don't notice any problems with reception from other stations that are more line of sight. The set-up that I have right now is a marked improvement over the rubber ducky antenna but still can't get a station 5-6 miles away with either antenna.

Also, I've got an exterior antenna mounted in our 2nd floor now but it must be for only a few bands as I don't get my local PD that's repeated on around 458.XXX. The tower for this PD antenna is at the highest elevation around at around 800 feet and I'm at the base of a mountain. I'm tight into a valley with 200 feet of mountain between me and the repeater tower which is only about 6 miles away and can't get it. I've had a Radio Shack discone years ago out in the flat areas of Chicago I could pick up fine all around but this mountain out here in Connecticut has really confounded me. Not sure what else there is for discones as the only one I've ever seen is a RS model for around $70. Any other better ideas to try?

The only difference I see is that the cable or coax (RG59) that you have for cable TV has an impedance of 75 ohms instead of 50 ohms. I guess that won't matter since you are not transmitting. There may or may not be a loss in your audio reception. 50 ohm coax (RG58 or better) is always the best way to go for cb/ham/scanner.

My bet is that with a 100 to 150 foot run of what is probably RG-6 cable, you're not going to see any appreciable improvement in the 450 MHz range. In fact, you very well may see a decrease in your signal level. The only way I can see that set up actually helping your situation is if you had a 450 MHz yagi antenna pointed in the direction of the signal you are trying to pick up. A pre-amp as close to the antenna as possible would help, as well.

That's just my opinion.

Or put another way, it receives all bands poorly.

Receiving all bands is not always a good thing as it will allow signals in from bands you don't want and that allows more overload or blocking. It's best to used tuned antennas for the bands that you want to hear.

To answer his other question, using TV cable would not be a good idea for a 100-150 foot run, even if brand new (aging hurts). In the first place it is not matched to the impedance of the antenna or the radio (cable is 75 ohm, the radio and antenna are 50 ohm) which will produce loss. Secondly, a run that long will act to reduce the signals at 458 MHz from line loss. A run that long for those frequencies requires using hardline, which isn't cheap (neither are the connectors).

If you're in a tight valley, there is another concern too. The echoes of the signal (multipath) can often make the signal unusable. Since each echo (and direct signal) arrives at slightly different times, in analog it sounds distorted (or just crappy) and in digital, it may simply not decode properly. This may be why you aren't hearing the 458 MHz channel(s).

What you might consider is a directional antenna (a beam) because this would help to minimize multipath (by pointing in one direction it tends to ignore signals not in that path). Yes, this is over simplified, but you get the concepts.

The bottom line is that if money is snug, you might be better off staying with what you have now instead of investing time and questionable resources.

It does matter. The mismatch is not going to change from transmit to receive, it's always there and the loss is bidirectional.

From: Carleton Reed
The only difference I see is that the cable or coax (RG59) that you have for cable TV has an impedance of 75 ohms instead of 50 ohms. I guess that won't matter since you are not transmitting. There may or may not be a loss in your audio reception. 50 ohm coax (RG58 or better) is always the best way to go for cb/ham/scanner.

Thanks Rick, I knew it would be a mismatch for TX, I wasnt sure about receive.

It does matter. The mismatch is not going to change from transmit to
receive, it's always there and the loss is bidirectional.

I have a Diamond Discone mounted 20 feet above the house with a run of about 100 feet of RG6. I get Vhf-Uhf from 50-60 miles away. I use a Scanner Master Notch filter HPN-30118 because the 96 and 106 have such lousy frontends and I have strong FM all around me. No problems with 400 or 800 systems in the area and I transmit with my FT-60 (2 meter/70 centimeter) and get good coverage.

Which was exactly one of my points. A tuned antenna notches the out of band signals (FM in your case). It's not that the front end is bad but that it is REALLY hot and the broadband antenna is beating it up.

You're getting good coverage (with a mismatched antenna) but it could be better with the right antenna and even lower power out and a happier radio with the lower SWR if you did it right.

You are right , but I scan lots of different bands and a discone works the best for me. Without a notch filter in my area the 96 and the 106 are both as deaf as a board with any antenna and I have tried them all.

So one of these notch filters should improve my reception on a discone?

Think of trying to hear your child on stage and the loudmouth sitting next to you just won't shut up. That is your scanner on a discone. A notch filter stifles the loudmouth but only on one frequency. It won't block the bozo on your other side or the one behind you. By the time you add enough notches to take out the noise, your recieved signal has also been reduced to nothing. Notches present a loss on all frequencies, just a lot more on the notched frequency. That is why I suggest tuned and/or directional antennas, they ignore (to a point) the off frequency noise and increase the desired signal.

The alternative is a bandpass filter (only listen between A and B). Either way it's bucks.

Any decent two way radio shop will carry them or once you know the
brand you can Google them. Occasionally hams will sell them too.

There are 'ham grade' filters that might also be suitable.

13863. RE: [PRO-96] Re: External antenna or other ideas for Pro-96

Yahoo group: PRO-96 (2008 — 2017)
Date: 2010-03-13 23:40:13 UTC
From: jackandrisin@sbcglobal.net
Topic: 13839 Message: 13863

I am in the middle of "RF Hill" and found that my main problem was front-end overload from FM Broadcast stations when using a discone or Scantenna on my 96 and 2096. I use a RS "FM Trap" with female F connectors (with the appropriate adapters) which you cant beat for cost-effectiveness.

I also use a better and more expensive solution for monitoring above 30 MHz which is the HPN-30118 . It is a 30 MHZ hi pass filter with FM BC band notch filter. This one comes with m/f BNC's. The 96's have very sensitive and wide band front ends. A nearby FM BC or WX FM xmitter can make them appear "deaf" when in reality they arent. They are just suffering from desense or overload. (You wont hear the offending station.) One way to check is to compare the reception of weaker stations with the duckie compared to the discone. If the Duckie wins it's usually overload.

Jack

13865. Help with storing frequencies

Yahoo group: PRO-96 (2008 — 2017)
Date: 2010-03-14 01:59:25 UTC
From: Okie
Topic: 13865 Message: 13865

I took the Pro-96 to an airshow today and I have some questions about saving frequencies.

I had some issues remembering the frequencies and the banks in use when scanning for air show frequencies. Let's say I would find 125.650 and try to store it in Bank 6 CH0, and then find 121.650 would try to store it. But I was wondering if I needed to store 121 above 125 and remembering that Bank 6 CH0 was already filled, while at the same time trying to watch a 3 year old and trying to watch a F/A-18 Super Hornet.....

1. With conventional frequencies, do they need to be stored from low to high? For example, does 133.75 need to be stored in a bank above 134.00 or does it matter? (I thought I read something that said on trunked systems 800Mhz, you needed to have the frequencies from low to high.)

2. Is it better to store frequencies "vertically" i.e., Bank 0, CH 1,2,3,4,5,6 or to spread them "hortizional" , or does it matter?

3. Any ideas on "working" the Pro-96 at an airshow?

Thank you in advance,
Okie

Bob, If you are talking about the HPN30118 notch filter, you can get it here.

http://www.scannermaster.com/ProductDetails.asp?ProductCode=24%2D531024

I just saw this.

Where can one purchase this item?

Thanks,

Bob

Think of trying to hear your child on stage and the loudmouth sitting
next to you just won't shut up. That is your scanner on a discone. A
notch filter stifles the loudmouth but only on one frequency. It
won't block the bozo on your other side or the one behind you. By the
time you add enough notches to take out the noise, your recieved
signal has also been reduced to nothing. Notches present a loss on all
frequencies, just a lot more on the notched frequency. That is why I
suggest tuned and/or directional antennas, they ignore (to a point)
the off frequency noise and increase the desired signal.

The alternative is a bandpass filter (only listen between A and B).
Either way it's bucks.

13867. Re: Help with storing frequencies

Yahoo group: PRO-96 (2008 — 2017)
Date: 2010-03-14 04:48:25 UTC
From: bryonh_98
Topic: 13865 Message: 13867

It doesn't matter how you program conventional frequencies in your scanner. However EDACS has to be programed in logical channel number.
I would put all of the aviation frequencies in one bank that way when you go to the air show you can lock out all but that bank.
Bryon
--- In PRO-96@yahoogroups.com, Okie <yank167@...> wrote:
>
> I took the Pro-96 to an airshow today and I have some questions about saving frequencies.
>
> I had some issues remembering the frequencies and the banks in use when scanning for air show frequencies. Let's say I would find 125.650 and try to store it in Bank 6 CH0, and then find 121.650 would try to store it. But I was wondering if I needed to store 121 above 125 and remembering that Bank 6 CH0 was already filled, while at the same time trying to watch a 3 year old and trying to watch a F/A-18 Super Hornet.....
>
> 1. With conventional frequencies, do they need to be stored from low to high? For example, does 133.75 need to be stored in a bank above 134.00 or does it matter? (I thought I read something that said on trunked systems 800Mhz, you needed to have the frequencies from low to high.)
>
> 2. Is it better to store frequencies "vertically" i.e., Bank 0, CH 1,2,3,4,5,6 or to spread them "hortizional" , or does it matter?

13868. Help

Yahoo group: PRO-96 (2008 — 2017)
Date: 2010-03-15 00:44:52 UTC
From: mtcsmith
Topic: 3645 Message: 13868

I own a Pro-96 and use the Starsoft program with much success. My friend brought over his Pro-106 and the Scancat-lite program. After finally getting the right cable hook up I have tried to download some files. The scanner keeps hanging up on frequencies and the screen is showing "CONV". I thing I have a conventaonal setting for regular scanning not for trunking but I can't figure out where I am wrong. I have the "trunk" boxes all set. Please help as my friend is waiting for his program. Brad

Hello Anybody,

I was trying to program a freq of 171.i625 into my 96` but it would only read 171.1650???
Is there a step mode to go to splinter channels? would you be able to help me?

Anthony

13874. How to delete/Lock out a talk LCN/Talk group ID

Yahoo group: PRO-96 (2008 — 2017)
Date: 2010-03-16 00:29:55 UTC
From: Okie
Topic: 13874 Message: 13874

I am monitoring the local 800MHZ EDACS system. I have downloaded the frequencies/talk groups from radioreference.com. I want to lock out the bus drivers and some others, but I cannot find their LCN in the win96 program.

The bottom of the scanner display shows 'ED   0665" and I don't want to listen to these guys. I cannot find any reference to 0665 in my Win96 configuration.

Any hints on how to lock these guys out with locking out the frequency?

Thank you in advance.

Okie

Topic: 13839 Message: 13876

Cable TV coax should be fine. I have used it a lot, but not that long of a run. You might want to run a pre-amp in between somewhere, I used to use a Bob Grove one and it worked really well.

> I've got a couple questions. Is cable TV cable good for an antenna. I've got a whole roll of good quality stuff and want to make a long run up to an antenna tower that's 50 feet tall. I'll likely need 100-150 feet total to get it into the house. The cable tv wire I was told would be perfect for this task. It would be far cheaper as I already have this in quantity but if it's no good for a scanner.?? I'm using around a 50 foot piece of this a cable tv wire now and don't notice any problems with reception from other stations that are more line of sight. The set-up that I have right now is a marked improvement over the rubber ducky antenna but still can't get a station 5-6 miles away with either antenna.
>
> Also, I've got an exterior antenna mounted in our 2nd floor now but it must be for only a few bands as I don't get my local PD that's repeated on around 458.XXX. The tower for this PD antenna is at the highest elevation around at around 800 feet and I'm at the base of a mountain. I'm tight into a valley with 200 feet of mountain between me and the repeater tower which is only about 6 miles away and can't get it. I've had a Radio Shack discone years ago out in the flat areas of Chicago I could pick up fine all around but this mountain out here in Connecticut has really confounded me. Not sure what else there is for discones as the only one I've ever seen is a RS model for around $70. Any other better ideas to try?

This is so true. That's why it's a good idea to ask around in your area to find out if one brand seems to be outperforming the others on the particular systems you wish to monitor. If not, you can't go wrong with any of them and your choice will depend on which features you prefer.

Have had the 106 for 2 weeks now. What a gem with the WIN 500 program of Dons. Recieve and decoding is clear and the WILDCARD seeking out the TG's is awsome. Along with the voice recording and the hit logging makes the whole combination work as one. Live in NW Ohio and have an awsone file for OSP, Allen Co. SO, Hancock SO, Findlay PD, EMS and Lifeflight. Along with all the conventional freqs. it covers it all.

Go with the uniden 396, i have a pro-96, excellent radio until it's time to decode P-25..
here in Montreal Canada the FD is a Motorola 800mhz P-25 trunked system.. and reception
with the Pro-96 is terrible...however the uniden 396 is exceelent on P-25 systems..
just my opinion
next investment... uniden 396

I recently installed Win96 on a computer running Vista.

I downloaded the Microsoft Net 1 program suggested on Don's site.

I entered my name (50 characters) and Key from my original email from Don. Everything seemed to download ok and accept my name and key ok.

When I open a new file everything looks ok on my computer but when I try to enter data or go to the help file it appears that all I have on my screen are templates. I can't go any deeper into the program than what is on my screen.

Has anyone had this problem.

I have an older version of Win96 on an old xp platform and it runs fine so I am familiar with the program.

From: j_multer
Topic: 13895 Message: 13895

I want to clone a file from my 96 to someone else's 2096, without dragging along a laptop.

Does the cloning cable have mono or stereo ends ?

Can I clone virtual files, or do I have to clone the file to active memory, then move it to a vitual file location ?

Will the 96 file clone cleanly to the 2096, or will I have to edit / correct any of the data once it's loaded in the 2096 ?

Thanks in advance for any comments.

The set-up that I have right now is a marked improvement over the rubber ducky antenna but still can't get a station 5-6 miles away with either antenna.
>
> Also, I've got an exterior antenna mounted in our 2nd floor now but it must be for only a few bands as I don't get my local PD that's repeated on around 458.XXX. The tower for this PD antenna is at the highest elevation around at around 800 feet and I'm at the base of a mountain. I'm tight into a valley with 200 feet of mountain between me and the repeater tower which is only about 6 miles away and can't get it. I've had a Radio Shack discone years ago out in the flat areas of Chicago I could pick up fine all around but this mountain out here in Connecticut has really confounded me. Not sure what else there is for discones as the only one I've ever seen is a RS model for around $70. Any other better ideas to try?

1. Yes, you need MOT mode set.

2. Yes, most people on this group use Starrsoft Win96.

3. Be advised that Win96 can do settings on the Pro-96 that can't be done any other way. It's possible that your problem is in some setting that needs Win96 to set it (although see item 1 first--I don't think this is a probable problem).

Win 96 won't work on the DTS 96 - but apparently I am told ARC 96 will work with your DTS 96 - so give that a go.

13918. pro-96 problems

Yahoo group: PRO-96 (2008 — 2017)
Date: 2010-03-26 17:51:44 UTC
From: dwolfe5788
Topic: 13918 Message: 13918

Hi y'all,
Long time since I've written to the group. I am having some troubles and hope the group wisdom can help me out.
1st of all, when I turn on my 96, I get 'all channels locked out' and nothing I have tried, which hasn't been much is restoring it. I do get the preloaded scan for fire, police marine etc and all weather, so the radio does receive something.
2. i don't know the latest versions and such or what buttons to push to find that out anymore.
and lastly, i had all my starsofft programs loaded on to a thumbdrive. I have a new computer at work and while it recognizes the drive pro 96 is coming up as a 30 day trial again. i thing that's cause its a hard drive the programs hasn't seen before. Where my record of my key that i put for 'safekeeping' is anyone's guess with all the relatives i have had living here since last I used the scanner and programs. At home, I can't even get the quad-core I built a year ago to even recognize the drive.
SO I NEED HELP!!!
I'm living in Boone county and getting interested in what the sheriff's are doing in response to calls lately. My family and neighbors have had to do some calling to them for neighborhood mischief-yes even out here in the country- and it might be good listening these days.
Other than that, myself and family are well and we are up to 12 horses, 2 sheep, 3 pigs, a few egg layers, 5 cats, and 3 dogs. None of them are interested in radio, but they are nice to have.
Waiting to hear from y'all soon

Put it in the manual mode and go through the channels. If you see a "L", that channel is locked out.
Unlock it.
I can't help you with your "lost registration" problem.

Clark

Your program on the thumbdrive is probably not "portable" (self-contained); in other words, the supporting files (e.g. the one that holds the license key) remain on the hard drive. You'll need those files on the new computer.

Another issue is if you're using Vista or 7 on the new computer, the user files are in a different location. The program on the stick doesn't know that, and needs to be taught.

From: qazaqw
Topic: 13924 Message: 13924

I have a Pro-96 that I have not used for several years because of an intermittent volume cntrol problem. I am planning on bringing to Radio Shack for repairs.

I have not updated the band plan.

I turned the radio on about a week ago and I still seem to get all the MA & NH State Police (digital) that I did before the band plan change.

Also, changed Lexington to MOT and that works fine.

Am I missing something?

Also I am running an od version of Don's software (v01.41) on an old xp machine. Seems to work fine. I can upload and download to the scanner with no problem.

I downloaded his latest version to a Vista machine and I am unable to communicate with the scanner using the same cable and onnected to a serial port.

Any thoughts / suggestions appreciated.

This list is for discussion about anything related to Radio Shack's GRE built PRO-96 Digital capable Scanner. This includes Any and all Software for the PRO-96. You can also place your p96 data files for WIN96 software in the files section.

We are the official recognized List by both GRE America, and Radio Shack, And Starrsoft software For the PRO-96..... Several Members are on this list and Our Sister List.

Thanks for your support

Group Contact, subscribe & unsubscribe info:

Post message: PRO-96@yahoogroups.com

From: newnethboy
Topic: 13930 Message: 13931

My Pro-23 finally became redundant when it wouldn't charge the batteries dependably. Here's what was wrong:

The power connector jack for most barrel-type connectors has three parts:
The outer cylinder,
The inner pin,
A contact switch.

The inside of the plug contacts the pin.
The outside barrel surface of the plug contacts the outer cylinder, or actually, a contact inside the cylinder.

The barrel of the plug also contacts the contact switch, pushing it out of the way and disconnecting the batteries from the radio (so that the external power can take over).

Over time, that contact switch can go bad, through dirt and/or wear and tear. Also, the outer cylinder contact can fail for the same reasons. (The outer contact may be physically a part of the contact switch; I don't know.)

My Pro-23 continued to run fine on batteries if they were fully charged outside of the radio, except when the contact switch failed to reposition itself after the plug was removed (failed to reconnect the batteries to the radio). Operating on an adapter was not usually a problem, until the adapter wire failed.

Now another issue could be your adapter. Yes, I see your report that it's working. I don't know how you know that, but even if you get a good voltage reading, there's still a possibility that the silly Adaptaplug is not making ideal contact with the cable end, or even that you accidentally got it on backwards.

Also, do you have the proper size Adaptaplug? The manual calls for a size C, but the RS guy sold me B, and it was an ongoing myth on this group when I first joined that B was correct. The B will work, but the barrel is too small to fully activate the contact switch, and I'd guess this could eventually cause a problem.

From: Stephen
Topic: 13932 Message: 13932

My Pro-96 is not receiving digital on San Diego RCS very well (Analog is fine). It's 7 years old and I wish to buy a new receiver. My question is which of the newer scanners are recommended by the the group. My first pick would be GRE (400 or 500). How do the Uniden digital scanners stack up. Uniden seems to be about $100 more than the GRE scanners.

Please advise what you own and what your pros and cons are.

Thanks, Steve

Steve:

The Pro 106 and Pro 197 (desk model) have been reduced in price by $100 to $400 at Radio Shack. It is a different concept in scanners and will take some time to get used to, but it is a great radio.

With Win500 software you can import your Pro96 files into the new scanner, and be up and running quickly. That will give you some time to figure out the Pro 106 and learn the new features and concepts at your own pace, but still have a working scanner.

From: Brian Verhalen
Topic: 13932 Message: 13936

I have ordered these scanners (waiting for the shipment) & downloaded WIN500 from Don. I have Win 96. Thought I would work on getting everything set up on the PC while waiting.
After I downloaded Win500, clicked on the WIN500exe & did the unzip with WinZip.
Then tried to open the Win500 but got an error message:

ERROR
Cannot find import, DLL may be missing, corrupt, or wrong version
File "WINxxCommon.dll", error 126

I went through this once before & have all of the DLL things from Microsoft, so not sure where things went wrong. Any thoughts / help????

As a side note, I will be putting my 96 & 2096 up for sale once I get these up & running if there is anybody interested.

Thanks

Brian

Check on Don Starr's web site, he has a fix for getting the .dll you need. I think its a vbasic dll.

Just got home with my new PRO-197. I give a report in a few days, but my digital audio problem has gone away :-)

When importing from the 96 to the 197/500 some of your frequences will be dumped to conventional due to the lack of spots in the new scanner trunked memory for frequencys.One option is to reduce the size of frequencys in the bank before the swap. With the $100.00 off that will pay for the things that are included in the GRE500 and give you a little cash in the pocket.

13941. Pro-197 First Impressions

Yahoo group: PRO-96 (2008 — 2017)
Date: 2010-04-15 05:57:43 UTC
From: Stephen
Topic: 13941 Message: 13941

I have had my new radio less than a week. Here are my thoughts.

1. Thanks to Don Starr, I was able to import my Pro-96 freqs with WIN500. So I could start using the radio right away!!!

2. The learning curve will be steep on the operation of the radio.

3. Preformance seem to be excellent, All of my APCO25 problems have gone away, no drop-outs, very few missed words. I hope MILAIR will be much better than the PRO-96.

4. Thanks to the guys at the Escondido Radio Shack (on 9th Ave.) for offering to clone their radio to mine. I've had my share of bad RS experences, this was a very good one.

I will post more as I can.

Thanks GRE/RS,

Steve

Unidens block encrypted transmissions. But keep your 96 too so you will know if there's activity on the channels you are monitoring (put that encrypted noise to good use, he he!).

The problem with that approach is that there are channels that are sometimes encrypted, sometimes digital clear.

13950. Win96 No Longer Runs On Win 7 Machine

Yahoo group: PRO-96 (2008 — 2017)
Date: 2010-04-20 23:36:15 UTC
From: ac6eg
Topic: 13950 Message: 13950

Win96 was working great on my new Win 7 PC a few weeks ago, but now when I try to start Win96 I get a Windows pop-up window that says

"Win96 Scanner Utility has stopped working.
Windows is checking for a solution to the problem..."

This is soon replaced by another pop-up window that says:

"Win96 Scanner Utility has stopped working.
A problem caused the program to stop working correctly.
Windows will close the program and notify you if a solution
is available."

I had been using Win96 ver. 1.66. I found there was a newer version so I upgraded to version 1.68 with exactly the same results. I deleted my old Win96 folder and re-downloaded and reinstalled Win96 but continue to get nothing but these two pop-up windows. "Running as Administrator" or in "WinXP Compatibility Mode" makes no difference. I did find that the program would start and run in "Virtual XP Mode" but it was unable to communicate with the serial ports. (i.e. Yellow exclamation marks on the com ports in device manager, but I'm not sure if the com ports are ever available from the virtual machine.)

Win93 and Win95 both continue to run perfectly under Windows 7 Pro (32 bit).

I'm wondering if this has anything to do with one of the recent Microsoft Updates.

Anyone else having this problem?
Any suggestions would be welcome!

There will be a popup from your task bar that something on the order of "New Solution Available for Reported Issue."

(I've actually gotten such popups.)

> Any suggestions would be welcome!

You're probably not going to like this, but you can run XP under VMplayer, which should behave and access the ports. I believe this is a lighter way to run XP mode (assuming you have a copy of XP to install). Might have to use a USB to serial converter.

I'm having some struggles with W7 also. Seems to be the latest virus inflicted upon us by MS (although most others I know are happy with it).

You can download the free Revo Uninstaller to uninstall W96 more fully and try installing the older version again. Also check to see if W7 provides you with a more comprehensive explanation as to why it keeps closing. Might be worth the research.

Subject: [PRO-96] Win96 No Longer Runs On Win 7 Machine

Win96 was working great on my new Win 7 PC a few weeks ago, but now when I
try to start Win96 I get a Windows pop-up window that says

"Win96 Scanner Utility has stopped working.
Windows is checking for a solution to the problem..."

This is soon replaced by another pop-up window that says:

"Win96 Scanner Utility has stopped working.
A problem caused the program to stop working correctly.
Windows will close the program and notify you if a solution
is available."

I had been using Win96 ver. 1.66. I found there was a newer version so I
upgraded to version 1.68 with exactly the same results. I deleted my old
Win96 folder and re-downloaded and reinstalled Win96 but continue to get
nothing but these two pop-up windows. "Running as Administrator" or in
"WinXP Compatibility Mode" makes no difference. I did find that the program
would start and run in "Virtual XP Mode" but it was unable to communicate
with the serial ports. (i.e. Yellow exclamation marks on the com ports in
device manager, but I'm not sure if the com ports are ever available from
the virtual machine.)

Win93 and Win95 both continue to run perfectly under Windows 7 Pro (32 bit).

I'm wondering if this has anything to do with one of the recent Microsoft
Updates.

Anyone else having this problem?
Any suggestions would be welcome!

I'm a big fan of Revo Uninstaller, but it won't help here because Win96 isn't really installed on the system like most other programs. It doesn't appear in the control panel add/remove program applet either. You manually "install" the program by unzipping it into a folder of your choice and then click on executable file Win96.exe. You uninstall it by deleting the installation folder. I did use Reg Edit to search for and delete references to Win96 but that has made no difference. The oldest version of Win96 I have on hand is v1.55 and it also refuses to run.

It's not a critical issue for me because I have a laptop and a few spare desktops running WinXP and of course they all run Win96 just fine. It just bugs me when things like this happen. It had been running fine on the Win7 machine. When I first tried to run Win96 I had trouble getting it to accept the registration data. I opened Win96.exe properties and checked the option to run as administrator. I was then able to enter the registration name and key information and the program ran fine and I was able to load my existing .p96 files. Now several weeks later I find it won't run at all. I'm finding that there is little to love about Win7 other than a little eye candy.

Been watching this thread, and it appears to me that you need to do this procedure if you haven't already:

1. Make sure you have your license number and name saved in a safe place.

2. Save to a new location any .p96 files you have.

3. Delete the Win96 program folder, the whole thing.

4. Do Run>regedit, and after exporting the Registry, search for "Win96". Delete any keys you find.

5. Restart your computer.

6. From a fresh download, unzip Win96 into a new folder.

7. Go to that new folder and double-click on Win96.exe.

If it doesn't run then, it's going to take someone way more knowledgeable than me or than those who've offered help so far.

(BTW, don't bother to enter your license info until you get it working. It shouldn't need it, and it's an extra step.)

I exactly followed the procedure you outlined. In addition, I deleted the registry keys related to "p96". None of this has made any difference. I suspect it may be a Digital Rights Management issue of some sort related to the way the program is activated with a user name and key.

It's probably not DRM.

However, it could be DEP (Data Execution Prevention). Make sure
Windows 7's DEP is turned OFF for Win96.EXE:

Thanks Don, that was exactly the problem. I must have enabled DEP for all programs & services sometime after installing Win96 and never made the connection. It would have been nice if one of the Win7 pop-up windows had indicated that DEP was preventing program execution with a link to possible solutions. I've added Win96.exe to the DEP exclusion list and it now runs perfectly.

Thanks again Don and to all of you who tried to help!

I am glad ac6eg has a resolution to his problem. Isn't this why we post? To communicate our experiences and help each other?

My Post was made before Don's response was posted. (the post have to be approved, so there is a delay)

I stand by what I stated, in my opinion, from my experience Don Starr's customer service is deficient.

I am aware that most members like if not love Don Starr's products, functionally speaking I know why they do.

As for newnethboy, attack? Really? You are entitled to your opinion (as well as I am), no matter how sensitive you are.

newnethboy if you have any other personal issues that you would like to discuses feel free to contact me, I am confident we can work it out.

But don't bore the other members.

There is no delay on yours or Don's posts. Neither of you are moderated.

That is not to say that it's not possible you posted before receiving
Don's post due to email propagation delays (the time it takes an email
to get from sender to receiver).

I don't have any record of any similar request from you (at least, not from any email address that includes "blackbat").

The only support requests I have from you are related to registration key problems, where you downloaded newer versions of Win96 yet still tried to use the 2003 registration key (i.e. the one associated with a "registration number" that you supplied) - instead of the replacement you requested on 18 July 2005 and were sent on 19 July 2005.

This same member replied on Feb 8, 2010 to another thread. In that message he had the same tone.

I, for one, am not persuaded by his posts, and I doubt others are.

We've had others on here rant and rave because "Mr. Starr" wouldn't baby-sit them when they wouldn't take responsibility for themselves. And others on the group made it quite clear where most of us here stand, and how most of us are quite aware of the reality that hardly any software vendor wants to know you if you, yourself, can't produce your license/product key.

But I've already said plenty on this topic for a non-administrator.

Hi,

I have been a long time member of this board and other fire/ems and flightsim boards. I no longer own a Pro-96 as it was destroyed in an auto accident. I use a Grecom500 now.

I understand your problem of the software not working correctly. I have had this happen with several other programs. The cause is simple - Microsoft Automatic Updates. My programs were all working fine until a recent update. I run ATC simulator 2. All the voice commands, both from and to pilots, just stopped working. The updates to my Windows 7 systems are the cause.

The problems showed up on both my Windows 7 computers right after an automatic update. My Windows XP computer still runs the program properly. Microsoft has changed something that causes problems with older programs (what a surprise!).

I exactly followed the procedure you outlined. In addition, I deleted the registry keys related to "p96". None of this has made any difference. I suspect it may be a Digital Rights Management issue of some sort related to the way the program is activated with a user name and key.

Some techs will advise to always apply all the updates, and Windows' default setting (also much software) is automatic updating on.

I completely disagree. I subscribe to the axiom, "If it ain't broke, don't fix it."

This principle is valid in many settings, but with computers being as complicated as they are, with all the complex interactions between hardware, operating system, and applications (all from different vendors, which does nothing to simplify the coordination), there are just gajillions of opportunities for some little thing to go wrong, a bit or a byte miswritten in an update can send your whole computer into apoplexy. (Or the update is perfectly fine, but the updating script flips a setting you don't want flipped.)

Turn automatic updating off, is my ardent advice. If you find that there's an update you need (e.g. the function that became required to use Win96 with RadioReference), download it and install it manually.

At minimum, wait a few weeks after an update comes out to see if there's an epidemic of problems throughout the world; and if there isn't, you can probably feel safe in applying that update.

Seems to me much safer than automatic updates.

Earlier in the thread, the question was, "It would be nice if there were a scanner that would mute the encrypted."

The reply was, "There are some, mostly Uniden."

Mike's reply was to ask, "Which models?" He meant, I'm sure from the context of the thread, "Which models mute the encrypted?"

IMHO, there are reasons for the conventions within email, particularly relevant to the present issue, the inclusion of the original message in the reply. Helps to explain what's going on, what the reply is replying to.

Now I understand the twin issues of limits in a group or list (in one listserv I'm in, I've been bounced a few times when I gave a lengthy reply to a lengthy message and overran the limit) and the fact that some group members use cellphones for their email and pay by the character for incoming. And therefore we do want to trim our replies, esp. cutting out what's not/no longer relevant to our reply. (Makes reading easier, too.)

And another good reason to trim is that presumably everyone reading your reply has already read all the messages in the thread up until yours, and won't read all that stuff again.

But there's such a thing as trimming too much, so that your reply doesn't communicate what you meant. Particularly, I would argue against deleting all the preceding message(s).

Meanwhile, as in this thread, clearly not everyone IS reading the whole thread, but has deleted (from computer or at least from human memory) all previous messages, and therefore has no idea what a reply such as Mike's is referring to.

I would urge individual members to consider what I've said, and to adopt each his/her own method of thoughtful trimming that enhances, rather than encumbers, communication.

Thanks for listening.

I'll disagree. With a few notable exceptions over the years, about ten years of updates has FINALLY left XP to be a fairly stable OS (still not up to linux standards though). My general rule is to wait and listen to see if others have had issue with updates (i.e. Vista, I'll not use it, though Windows 7 appears to be ok). If I had left XP in the pristine original condition at the time of install, the only window operating would be the one I threw the computer/laptop through.

The few updates I'd complain about broke as much as they fixed and folks had to update the update to get things rolling again. If MS would stop demanding the 'mother may I, yes I mean it, I'm REALLY sure I mean it, just DO IT" protections (?) and the need for an entire reboot (why not just the process that needs it?) it would be far more useful to those of us that hate waiting 5 minutes for the reboot to finish (yes, most of it is in the background, but linux spoils us in that regard and a full reboot is stupid).

No we don't need another OS war and you and I have already discussed much of this before on other groups.

One word of caution for that point of view: Often times these updates are
to correct discovered security vulnerabilities. If your PC is not connected
to the internet -ever-, then your practice is valid, otherwise it may not be
so wise. Of course, it's up to the individual user.

Both Ken's and Rick's replies tell me I wasn't completely clear.

I don't say, don't ever update. I agree that many programs and Windows in particular are "not ready for prime-time" when released, and only get working right after several upgrades. (The saying, "Never buy version 1.0" goes back a long, long way.) And Ken's right-on that security patches have been necessary (with alarming frequency).

What I am strongly urging is, turn off the automatic update option. Watch the user groups, tech news, or whatever your choice is, and manually download and install the updates that 1) are actually helpful or downright needed AND 2) have not given users all kinds of fits.

Besides avoiding the updates that scramble everybody's computers, if something goes wrong, you're AWARE there's been an update recently, and at least you have a starting point to find a fix.

13982. 96 / 2096 SALE

Yahoo group: PRO-96 (2008 — 2017)
Date: 2010-04-24 18:52:20 UTC
From: Brian Verhalen
Topic: 13982 Message: 13982

Before I list them on eBay (after vacation, 5/4-5/20) I am putting it on here to see if there is any interest in either.

I am selling 1-PRO 96 & 1-Pro 2096.

Looking on eBay today, I see the 96 bids running between $175 to $330 (1 at $51, not sure what that was about).
The 2096 bids running between $127 to $349.
Never know until bidding ends what the final price will be.
Looking on RR, other than 1 96 as part of a 5 unit package or someone looking for a trade, nothing listed there.

These are used units, that are in at least good condition to very good condition. I am the original owner, non smoker.

The 96 comes with the scanner, rubber duck antenna, both battery holders & manual.

The 2096 comes with the scanner, mounting bracket/hardware/etc, telescoping antenna (part of the original package) & manual.

I would be willing to do any programming needed using WIN 96.
I can take some pictures if needed.

Payment/shipping details to be determined, I have sold on eBay & have a PayPal sellers account.

contact me off list if interested

Brian

i know that no scanner can monitor encrypted. i was wondering if there was one that cut out the encrypted noise on channels that are mixed between open and encrypted.

Hello,

The Uniden BCD396T will mute encrypted audio on a Mixed Clear/Encrypted TalkGroup.

Eugene uses P25 trunking (according to RadioReference) but they use discrete channels for their daily operations. It is reported as a mix of analog and digital. Digital encryption you can block (won't hear), scrambling you can't. They may be doing something unique if they are still using analog radios (in transition to full digital?).

If the signal is P25 digitally encrypted (a bit is set in the data path which enables a preprogrammed [en/de]code 'key'), the Pro-xx96 (and others) will refuse to decode (which is proper) and will continue to scan. If the signal is scrambled (for example audio inversion) ALL scanners will pass that audio, annoying that it is. If you're unsure if they are encrypting or scrambling, ask another local user or some knowledgeable person at RS.

I don't quite understand when encryption is being discussed here. Just before I purchased my PRO-96, I was listening to Kings County SO with a conventional scanner. All of a sudden one day, they were scrabbled or maybe what yall are saying, encrypted. All I knew was that Kings County went digital and the PRO-96 was the only scanner that would pick them up. There was a scanner code ID that I had to program in the scanner in order for me to unscrabble the signal. I believe it was a PL tone, but not sure. The ID code for KCSO is 146. For Hanford PD it's 293. I was able to get that info thanks to a couple hams who are radio techs for Kings County. Our local Radio Shack Stores have that info now. So Mike you might want to check to see if there's a scanner code that will clear your problem. Don't hurt to check. To the rest of the group, if what I'm saying is wrong, I welcome anything correction so that I will better understand about encryption. I purchased my PRO-96 about 4 years ago and till this day, KC Sheriff is the ONLY frequency I programmed in it. One of these days, I'll get around to programing the rest of the frequencies in the scanner. I still use my Yaesu FT-51R HT to scan the other freqs.

From: newnethboy
Topic: 13945 Message: 13991

For Carlton and others who may have come in late: This thread started with the question, "Can any scanner mute the encrypted transmissions on digital?" (That's not an exact quote, and I think that's where it actually started.)

This was bounced back and forth until Mike asked today specifically about Eugene, OR, and Rick noted that the PRO-96 will skip digital, encrypted transmissions, but no scanner will automatically skip analog, scrambled transmissions.

A quick review of theory for those who might need it:

Digital transmissions can only be monitored correctly by a radio capable of receiving digital. Sometimes, an analog-only receiver will receive the signal but not be able to decode it, and the result will be garbage (this is not the same as encryption or scrambling, but it sounds a lot like it).

Trunking systems can be received by any radio capable of receiving the transmissions (depending whether they're analog or digital). However, reception will be hit-or-miss, depending upon whether the radio happens to catch an operating frequency while it's in use, and keeping up with one "conversation" will be impossible unless extraordinarily lucky.

Digital radio signals can be encrypted. Analog signals can be scrambled, but not, technically, encrypted.

The PRO-96 does analog, digital, and analog or digital trunking. It's illegal to monitor and/or decrypt encrypted (and/or cell phone or digital data) transmissions, and thus no scanner does or will receive encrypted. According to various people in this thread, the Uniden 396/996T and 396/996XLT mute/skip digital encrypted transmissions, and resume scanning. Rick reports today that the PRO-96/2096 does the same.

This doesn't make completely clear what Eugene, OR, and that area are doing by way of digital or analog, trunked or conventional, or encryption or scrambling.

If they have a trunked system, your scanner has to be programmed for the trunk system, or you'll be lucky to catch anything, let alone follow a conversation. Trunking is not like any radio since Marconi. Until now, if you wanted a station, you tuned to a frequency; now you need to "tune" (program) to a "talkgroup" (TG), telling your receiver how to understand the trunked system's instructions for what frequency to listen to at this moment (might change for next time).

The codes Carlton is talking about are probably TGs, and the radio had to be programmed so that TG identifier means something to the radio. Sounds like the "encryption" Carlton reports was actually the digital signal being

received by the analog receiver and not understood or converted to
intelligible signal.

????

I can only presume that this is referring to non-trunking scanners, or
trunking scanners that are not programmed correctly.

Most current trunking scanners have no problem "keeping up with one
'conversation'". They just wait for that active talkgroup for some (often
configurable) amount of time.

>According to various people in this thread, the Uniden 396/996T and
>396/996XLT mute/skip digital encrypted transmissions, and resume scanning.
>Rick reports today that the PRO-96/2096 does the same.

The PRO-96/2096 does NOT skip encrypted transmissions on:
* conventional P25 channels
* voice frequencies on P25 systems

The PRO-96/2096 *may* skip encrypted transmissions on:
* P25 CAI voice channels on systems with Mot 3600 control channels
(This is how the PSR-500 behaves. While I'm intimately familiar with the
PSR-500's code and operation, my familiarity with the PRO-96's source code
is not quite as deep.)

Yes, that's exactly what I meant to say. Sorry I wasn't clear.

Should have said:

Trunking systems can be received by any radio that can receive the frequencies (depending whether they're analog or digital). However, reception will be hit-or-miss, depending upon whether the radio happens to catch an operating frequency while it's in use, and keeping up with one "conversation" will be impossible unless extraordinarily lucky. Only a scanner made for trunking will receive this properly.

My apologies also for not being precise. I have only listened to 3600 bps P25 systems and encryption is rare (mostly SWAT and other cop things I don't bother to scan). On the rare occasion I listened in on an event, the encrypted channels were 'skipped' so I didn't hear them anyway. For some reason the 9600 bps systems are rare in my area.

And Other Rick, my analog Moto radio (an oldie and goldie high band with a UHF extender) can be fitted with a Moto DES encryption unit (in an analog radio) but I suspect that part of that encryption is the conversion to digital audio. I never bothered to find out because I now use it for ham purposes (it used to be CHP and CDF when I was employed). It would be illegal to encrypt in ham too (and rather pointless).

Don: Since you are heavily in the pipeline, is there anything new coming out to augment or replace the PSR-500? I still don't have one because the Pro-xx96 does what I need (except LTR, no big deal). From what I have seen only the addition of ProVoice (not bleeding likely) could be added. They seem to do it all.

No, the 96/2096 will not. They will attempt to
decode the signal resulting in a garbled 'mess'.

I didn't want to get into the details of encryption and scrambling, for two reasons:
1. That would have been too heavy for the thread.
2. I wouldn't have known what I was talking about.

Maybe someone who does know will chime in here.

14001. 96 / 2096 SALE

Yahoo group: PRO-96 (2008 — 2017)
Date: 2010-04-28 16:25:04 UTC
From: Brian Verhalen
Topic: 13982 Message: 14001

I sent this email out a few days ago listing the 2 scanners I am selling & want to try again. The 96 went via post office to Toronto, Canada yesterday but the 2096 is still available. If there is any interest please contact me off list.

Thanks
Brian

Before I list them on eBay (after vacation, 5/4-5/20) I am putting it on here to see if there is any interest in either.

I am selling 1-PRO 96 & 1-Pro 2096.

Looking on eBay today, I see the 96 bids running between $175 to $330 (1 at $51, not sure what that was about).
The 2096 bids running between $127 to $349.
Never know until bidding ends what the final price will be.
Looking on RR, other than 1 96 as part of a 5 unit package or someone looking for a trade, nothing listed there.

These are used units, that are in at least good condition to very good condition. I am the original owner, non smoker.

The 96 comes with the scanner, rubber duck antenna, both battery holders & manual.

The 2096 comes with the scanner, mounting bracket/hardware/etc, telescoping antenna (part of the original package) & manual.

I would be willing to do any programming needed using WIN 96.
I can take some pictures if needed.

Payment/shipping details to be determined, I have sold on eBay & have a PayPal sellers account.

contact me off list if interested

Brian

Kings County Sheriff in CA uses a conventional digital channel with a Network Access Code, or NAC, of 146. Some people confuse simply moving from analog to digital as encryption, but it's not.

14008. PRO-96 Problem

Yahoo group: PRO-96 (2008 — 2017)
Date: 2010-05-10 14:37:33 UTC
From: elmocoh
Topic: 14008 Message: 14008

Our local police dept. recently switched to P25 digital. I did not want to spend $400 to $500 on a new digital scanner (actually there are two of us in the household that listen, so it would mean two scanners). I found a PRO-96, refurbished, on Overstock.com for $225. It arrived in mint condition and worked just fine decoding the digital signal. I ordered a second one, and it also worked (works) fine. Both are late models (CPU F1.4 and CPU F1.5), and both were flash upgraded to DSP 1.4. The local police operate on a single channel with, I believe, one transmitter site.

However, there is one police unit (possibly a portable) that comes in totally garbled on both radios. This is not an encryptation issue or weak signal area. Could this unit be set for a different digital protocol (I am not an expert in this area)? The other units on the system apparently copy the signal with no problem. Of the several digital systems I have successfully monitored, there is only one other one that I have encountered this problem. Harvard University Campus Police are P25 digital, and in this case the base station comes in garbled, but all the mobile units are received in the clear.

Anyone have an idea on what's going on here?

Thanks.

If it sounds fluttery like they're under water, try turning the digital AGC off (un, Function Manual if I remember correctly).

Al, If you go to the Files area there are some files from Aust, from memory one from Canberra & Another one from the East Coast - although it may be a little out of date - since NSW Police went to digital Encyption, What parts of Aust are you looking for in Paritcular?
I have a couple from SA , & ones that I have made up for when I travel to NSW & Vic although they are mainly only Rural stuff, not NSW GRN Or Vic MMR.
Cheers
Andrew.

Thanks, I did that when I first got the radio. I'm now convinced that what I'm hearing is a coded/encrypted transmission.

I'm not sure why you are think this is NOT encryption. From what you describe, the garbled unit is using encryption, and the dispatcher and other units are not. This is not uncommon, as some users do not enable encryption by default, so one radio may be set to "secure" simply by mistake. As far as the dispatcher and other users of the P-25 radios go, since they theoretically have the same encryption key in their radios, they wouldn't notice the difference.

From: John H
Topic: 14017 Message: 14017

Okay, so I've been having this problem for a year or 2 now, but it's getting worse and worse.
I know I'm not the only one with this problem.
even if I have the volume knob right down as low as it will go, it's still way tooooo loud!
Before, if I would wiggle the knob, play with the squelch knob, and wiggle the antenna a bit I could get the volume down to an acceptable level. But now that doesn't work any more.
What can I do?!

14024. Best Book on scanner radio

Yahoo group: PRO-96 (2008 — 2017)
Date: 2010-05-14 13:15:17 UTC
From: regalorastis
Topic: 14024 Message: 14024

Could someone reccommend the most comprehesive book available on scanner radios,
Not looking for specific models, more the various technologies current, and tricks,

One trick I remember is very simple, its about using a scanner by feel, and this involves programing certain banks so that for instance, you can know by touch which number you are on.

use the corners of the keypad and program the relevant frequencies so that you can touch number one, eleven and onehundredeleven, and each corner, easily located by touch is utilized by programing certain frequencies that can be accessed by feel without mistake. and such combinations as 123 or 321 and up or down the sides, etc.

This is an old school trick, there are more,

But really I would like to learn the new technologies and have them explained in detail

I am selling my Pro 2096 base/mobile scanner (bought the 106 & 197),
& will be listing it on eBay within the next week or so. I am listing
it here first to see if there is any interest.
I sold my 96 recently (it went to Toronto, Canada), shipping to
Canada is not a problem.
If interested or need further info, please contact me off list.

It is in very good condition with latest updates from RS
package includes:
scanner
manual
antenna
mounting bracket & all screws/washers/knobs
DIN sleeve & keys

PayPal accepted for payment

Note, rockky, that the Pro-96 is not like your (or my) previous scanner, because trunking is definitely not like our previous one-assigned-frequency radio systems.

On the Pro-96, we can still press MAN to lock onto a conventional channel, but locking onto one trunking talkgroup has to be done differently. Thankfully, the designers knew that and made a way. We have to remember an arcane key-combination, but it's easy to do.

(Observation: The Pro-96 has been around long enough to be superceded, yet we users are still trying to get our heads around trunking. That's because trunking might be thought of as the biggest change ever in radio. We went from transmission of Morse code to voice to FM to TV, but through all that, we still had essentially "put it on the frequency and hear the transmission". This is hugely different, and anybody who has grown up with conventional radio [that would be everybody] is having to learn new-and-different and unlearn old assumptions to get into trunking.)

I want to monitor the Verdugo ICIS system, (specifically Monrovia FD, where I work) but can't get it to work. I've heard that the Pro-96 wasn't originally designed to monitor the Motorola Type II Smart Zone systems. If true, is there a software upgrade available or some other way to accomplish this? Thanks in advance.

Hello All,
In the last couple weeks EMT Dispatchers in Milford NH have started using a new "Brievity Code" apparently to describe details of the subject/victim's condition for each call. Does anyone have access to a list of these codes?
Thanks in advance.
Herb

Take a look at the "AMPDS dispatch codes" on this site. I don't know how widely used these codes are but they look like what you are describing.

14058. Two trunked systems in one bank?

Yahoo group: PRO-96 (2008 — 2017)
Date: 2010-06-22 07:13:32 UTC
From: jackamaymee
Topic: 14058 Message: 14058

Is it possible to have more than one trunked system, in the same bank at the same time. To be more specific I don't mean having different trunking types(i.e. EDACS + Motorola) in the same bank. I just want to know if it is possible to have two Motorola trunking systems in the same bank?

I know that in previous RadioShack models, that you could do this as long as you separated the two trunking systems with at least one conventional frequency.

14061. Re: [PRO-96] Two trunked systems in one bank?

Quoting the OP: "To be more specific I don't mean having different
trunking types", so the 'no' does not apply to the question as posed.

> Almost certainly no to multiple EDACS: In EDACS, you must put the control
> channels in the same-numbered slots as they are in the system (therefore you

Odds are against it, but it is possible if they don't share LCNs.

> Usually not to Motorola: The important issue is the Trunking Table. Nothing
> will work unless you tell the scanner the correct "code" to decipher the
> control signals, and there's only one trunking table per bank.

Fortunately, most Motorola Analog trunks are 800 or 900 MHz where the
tables are standard (or were pre-Rebanding for 800 MHz).

> Such systems can be combined into one bank in the Pro-96, but you must put a
> conventional frequency* between systems.

Again, quoting the OP: "I know that in previous RadioShack models, that
you could do this as long as you separated the two trunking systems with
at least one conventional frequency."

I try not to answer with the same qualifications stated in the question.
That's why I didn't mention the limitations. It sounds like the OP knows
them. I did mention about a couple of limitations he didn't mention.

I thought about stipulating that, but decided not to clutter my statement.
But that's why I started with "Almost certainly".

> > Usually not to Motorola: The important issue is the Trunking Table.
Nothing

Several cities in Los Angeles County, CA are currently cooperating in the
ICIS system, which is 470-482 MHz. The County and L.A. City are major
players in planning toward a county-wide SmartZone which will be 470-482 MHz
(City will be moving from 800 MHz conventional when the changeover occurs).

The ICIS and the planned LA-RICS are trunked, digital, and the tables for
ICIS have a lot to do with the multi-site system working as expected.
```

Yes, but for some readers, the details of this need to be clarified. There
was considerable discussion of this issue on this group and elsewhere a
couple of years ago, and great confusion as to what, exactly, would work.

(I don't know what the OP meant by "previous RadioShack models" having this
capability, but it is not clear to me that he "knew" that the Pro-96 could
do this, and certainly not that he knew the details.)

> I try not to answer with the same qualifications stated in the question.
> That's why I didn't mention the limitations. It sounds like the OP knows

I've learned from sad/maddening experience that what you don't state clearly
will come back to annoy you (witness that I left out the scenario with
different LCNs, and your response). I've seen too many cases where a brief
answer causes more confusion and more frustration than the OP started with.
Furthermore, on groups/forums/listservs, I'm always aware that there are
bound to be lurkers with the same questions, who are better served by a
complete answer; they may know more or less than the actual OP.

Page 50 of the manual says it is on during single channel use (non-scanning). So if you were to scan it wouldn't be on. If you want to only listen to one channel and not have battery save on, enter the same frequency multiple times, then press scan.

That was an interisting answer Rick. I think you found the only reference to the Pro-96 "battery save mode" in the entire manual and your suggestion should work well. I can't say that I have ever noticed any missing any audio when monitoring a single channel. Hope this solves Allan's problem.

14072. RE: [PRO-96] Re: Sleep Mode.

Yahoo group: PRO-96 (2008 — 2017)
Date: 2010-06-29 15:18:05 UTC
From: Rick Bates
Topic: 14067 Message: 14072

I didn't bother to actually /read/ through it to find it, I have the .pdf manual on file. Much easier to find things quickly. ;-)

The bottom line for Allan is that it MUST be in scan mode to disable battery save mode if that is the true source of his listening problem. I don't know how long it takes the Pro-xx96 to react when coming out of save mode, but if the users talk quickly at key up (a very poor habit for radio talkers) he could miss a few syllables. Even the fastest radios take a few moments to settle in, decode tone(s) and open squelch etc. I'll explain in a moment.

Allan can also check his squelch mode (CTCSS, DPL or non-toned) and threshold level to make sure that they are correct (not too high on the control). CTCSS and DPL take slightly longer to open the squelch.

The old Moto CTCSS (PL) standard was 450 ms [a half second] if I remember correctly but that was back in the reed days (still used so the standard holds).; Digital decoding is much faster, often coming in at <100 ms for CTCSS, 250 ms for DPL. The actual tones vary slightly in decode speed (higher tones decode faster).

Drifting back to the old commercial days, you'd take that 450 ms, THEN using a relay (add 250 ms, sometimes longer because of the points bouncing slightly, it's mechanical like the reeds), key the transmitter (in a repeater operation). The repeater often has a tone as well (more than likely a different tone than the receiver because not all the original tone is filtered out causing mixing [WOWing] of tones) which the shared users would have to decode etc. resulting in well over a second of delay before the shared user could hear anything. Which is why it is still good practice to wait at least one second before sending audio on a simple repeater. On today's linked radio systems (hardwired to the Internet or RF links) waiting a few seconds before talking is a good habit. The more complex the network, the longer it takes for all parts to march in the same direction.

On the newer P16 or P25, this is enforced by the transmitting radio signaling with a tone (to the talker) that the talkgroup use is approved, the channel is selected and that it's ok to talk. It commonly takes at least a second so quick talk won't work. That controller 'ok to talk tone' might take longer especially when you get bumped by a higher priority user (warning is a constant tone, meaning shaddup). Then if it's digital audio, add another moment for decoding (that's pretty fast though). It's really not possible to quick talk on a trunked system, too much background stuff is going on. The only system you can quick talk on is a simple carrier operated (no tone) radio without a repeater and it's still poor practice.

My long winded point is that it may not be the Pro-xx96, but that it may be (at least partly) poor operating practice of the channel user. To find out,

use two radios on the same channel and let one sleep while the other stays awake (scan mode, single channel). Compare to see how much loss is really there.

My first three years of two-way radio experience was on a basic simplex system. Key the mic and you're on. We'd keyandtalk with no problem; sometimes we'd use simply keying the mic to produce a double-click as an acknowledgement. (It was a very uncrowded system, about twenty mobiles and two bases.)

Thus when I started using a mobile-repeater system, I was clipping every transmission, until I was advised to key-wait-talk. (That was a shared commercial system, using PL.)

That was a basic analog mobile-repeater system, in the 1970s, so probably anything today is more complex. On the other hand, it's done now by computer, so maybe it's no slower.

That also goes back to NASA; all the first missions if I remember, Mercury, Gemini and Apollo had VOX for the mics on transmit, NASA finally figured out that most of the time the "AH or UH" before the message was enough to start the transmission :)

14080. Programming a PRO 96 by hand

Yahoo group: PRO-96 (2008 — 2017)
Date: 2010-07-31 13:22:52 UTC
From: brian_goldjazz
Topic: 14080 Message: 14080

I am trying to program by hand a PRO 96 for the GRN
I know that it you can only program one base freq. offset and step.
Am I correct in assuming that you also have to program the contol / data frequency for the nearest tower as well for the PRO 96 to partially monitor the GRN
Brian S

1. You need to program one bank for one tower (unless multiple towers use the same exact base, offset, and step).

2. If the system you're trying to program uses an extended table, you can't program it manually; you need Win96.

3. Your question: You do have to program the control frequencies into the channels of the same bank. You do not program any data channels there; they're in the frequency table (data goes out on a frequency chosen from a bank/range of frequencies; the system has a license for a range of contiguous frequencies).

4. You're correct that this will give you a partial programming of a multi-site system. That'll work fine if everyone you want to monitor operates off of that tower. Otherwise, program other towers into other banks.

5. All this assumes that "GRN" (whatever that is) is a normal Motorola trunking system.

Thank you for your reply
I meant to post my questions on a Australian group (south Australian) SAscan GRN stands for Government Radio Network and uses Motorola P25 trunking.

I bent the tabs in the radio, that the battery pack makes contact with, out a little bit.
Seemed to put a bit more tension against the battery pack, it helped on mine.

14089. 9600 baud deafness

Yahoo group: PRO-96 (2008 — 2017)
Date: 2010-08-22 12:43:38 UTC
From: Ken Bandy
Topic: 14089 Message: 14089

Hello, I have been using my PRO96 to monitor a couple of digital systems, one mixed, and one true APCO 25 9600 baud for several years. I noticed that I wasn't hearing anything on the true APCO 25 system any longer. After doing some checks with my old Uniden BC296D, I found that for some reason, my PRO96 no longer could decode the 9600 baud system. I am also noticing that it appears there are more drop outs on the 3600 baud (mixed) system. Analog systems seem to be fine. The PRO96 has been used almost exclusively in a mobile type application, so it has been bouncing around for 6 years. Has anyone heard of this happening to a PRO96 before? I don't think I am interested in getting this old fellow repaired, as I'll probably eventually replace it with a newer generation unit, and the repair would probably cost more than I'm interested in paying.

Ken, KJ9B

Hi, I've had my 96 in for two repairs since getting it in 2005 and have you checked to see if it is something with your antenna? Also, I'm just curious, but has anyone successfully found a way around choppy audio on CQPSK P-25 systems? I did the firmware upgrade and everything to mine when in Michigan but the Detroit MPSCS subsystem was monitorable, but choppy audio was the issue, and back then I didn't live too far from one of their towers.

(Making a new thread for this:)

From what has been reported in this group in the past, I'm wondering if your choppy audio was caused by just the opposite of what one would suspect, that your scanner was being overwhelmed by the strong signal.

Hi, I've been reading the posts for awhile now. I have manually programmed my pro 96, but would like to be able to make changes and switch to a software program. I know I have a couple different options, but I'm wondering if you can tell me which program you are using, if there is a reason you like it better than another program, or any other recommendations. I will be monitoring a few different types of systems including an 800 digital, 800 analog, VHF/UHF. Thank you for your input.

Agreed, completely. You'll also need a RadioShack #20-047 cable or equivalent.

Win96 can programming anything the radio is capable of, including some things that can't be programmed any other way. Also much easier than manual.

Have a look at Butel's ARC96 it has a free timed trial, not expensive and the after sales service is second to none.
I used it on my BT246 and now on my Australian version (DTS96) of the PRO 96, you will also need to buy / build a cable.

things that can't be programmed any other way. Also much easier than manual.

I've been listening to the police radio since 1959. After getting my 96 and Mr. Starr's software I can say that I have not enjoyed scanning so much since I started.

Win96 makes it so much easier to use the 96 and if you take it with you when you travel between Win96 and RadioReference.com it's like being in scanner heaven.

Hi, I've been reading the posts for awhile now. I have manually programmed my pro 96, but would like to be able to make changes and switch to a software program. I know I have a couple different options, but I'm wondering if you can tell me which program you are using, if there is a reason you like it better than another program, or any other recommendations. I will be monitoring a few different types of systems including an 800 digital, 800 analog, VHF/UHF. Thank you for your input.

From: elmocoh
Topic: 14104 Message: 14104

Today when I turned on my PRO-96, the display was really messed up. No boot screen, just random numbers and letters of various sizes. None of the buttons or controls would work. Reset button did nothing but change some of the characters. I was able to receive stations already programmed.

I use the scanner at my desk almost exclusively, using RS power supply. Batteries (alkaline in black holder) were dead, but this should not matter when using power supply. I have had the radio for 9 months, and it has worked perfectly.

Anyone have an idea what happened? Any suggestions? Thanks.

14107. VHF frequencies rounding off in DTS-96

Yahoo group: PRO-96 (2008 — 2017)
Date: 2010-09-12 09:58:37 UTC
From: Mark Aitken
Topic: 14107 Message: 14107

Gidday,

I am the owner of a DTS-96 (Aussie version of the Pro96).

For some reason, when using ARC96 (the only software that will work with the DTS-96), when programming in 12.5 KHz spaced channels, ie our Country Police or Fire Brigade services, the system rounds of to the nearest 5KHz which is annoying as it wont help with monitoring these services.

Any ideas as to why the DTS-96 might be doing this? or does the Pro96 suffer a similar fate?

400 MHz and 800MHz dont seem to be worries as they work ok with 12.5 khz spaced services.

Thanks for your input

Mark

I had something similar happen to my Pro-95 a couple years back. I can't remember the specifics now but I think it had dead or almost dead batteries and I was disconnecting it from the AC supply and using it with battery power. Next thing I Knew all my programmed frequencies were wiped clean. I know I'm not making much sense here but at the time I believe it had something to do with a kind of spike in the current going from AC to DC that screwed it up. I hadn't programmed it with a computer or had any backup so had to reprogram everything manually. This (at the time) had hundreds of frequencies from everywhere across the US that I traveled to and all was lost. Very frustrating.

It would have helped your query, a lot, if you had bothered to mention
what band of frequencies you are actually talking about.

The 70 - 85 MHz segment of the Radio Frequency Spectrum is used in the
USA for totally different purposes to what it is used for in Australia,
and does not use 12.5 or 6.25 kHz channel spacing.

Yea, no probs, point noted.

VHF Hiband. Our local VK3 (Victoria Australia) Country police band is
in the 161 - 163 MHz band as is the country fire authority (CFA).

This appears to be the band that is affected by this rounding off problem.

> Are you sure it's the program and not the scanner? A lot of older scanners do the same

Dont know, trying to see if others have experienced similar?

> thing, you should still be able to hear the stations you are trying to monitor though.

Though that myself, doesn't work.

Thanks for your replies.

It's an issues in the USA, too. The scanner does not (and never has)
followed the USA bandplan for that band.

Hi Mark.

I use my pro96 for the same thing when visiting Victoria. I think it is set for 15 kHz steps in that band rather than the 12.5 we use in Australia. The difference is so small that I've had no problems with reception. It just looks odd on the screen but shouldn't stop you listening to CFA.

Regards,

Ross

Mark

My understanding of the US Bandplan, is that
150.8000 to 161.9950 is in 5 kHz steps,
and 162.0000 to 173.9875 is in 12.5 kHz steps.
and the scanner tables are set up for this.

Have you bothered to raise the matter with the author of the Software?

14121. Regular programming

Yahoo group: PRO-96 (2008 — 2017)
Date: 2010-09-20 12:22:48 UTC
From: tiny_lund
Topic: 14121 Message: 14121

Hi, I never could figure out how to program my scanner for digital and had a friend more into radios do it for me. When I first got the scanner I had programmed in some regular frequencies in my area that weren't digital and then there was no way to program in the channels for digital that were already in the owners manual for Connecticut State Police. Anyway, he got it working and said he figured out what I did wrong in the beginning but I have no idea what that was now. I asked him if it was possible to program in these ordinary frequencies and he said no. It's been so long now I can't remember for sure but I think he did tell me he programmed in everything that was in the owners manual so I probably have states in there I'm not going to be using although I do go to Illinois fairly frequently so everything between here and there I'd likely want. I'm kind of miffed now because this would mean I would have to carry 2 scanners to listen to the local FD and on the packaging for the scanner it says something about it was capable of close to a gazillion channels. haha I there any chance he was wrong?

Only about 100% chance he was wrong.

Not only can you scan/monitor digital, digital trunking, analog, and/or analog trunking at the same time, in some cases you can do it in the same bank.

Before I go further, let me clarify that there are two ways to program a digital-trunking scanner, the easy way and the nearly impossible way. That's with computer software or from the keypad. There's an old saying that to operate a wheelbarrow, first you gotta be smarter than the wheelbarrow; a digital-trunking scanner is a powerful-smart "wheelbarrow", and many of us who use one have not the smarts to outsmart it.

Here's what you need: A Windows computer, the computer program Win96*, and a RadioShack 20-047 cable (and of course, a Pro-96). A paid/premium subscription to RadioReference.com will probably be a real help to you also.**

In Win96, you'll be able to put together a program for your scanner, using manual methods or downloads from RadioReference, this or other scanner groups, and/or friends with Pro-96s.

You have 10 banks in the main scanner, capable (theoretically) of 50 frequencies each. In practice, you can put only one trunking system in each bank, so that might be five or six or so frequency entries.*** However, you can fill in (many of) the other slots with conventional frequencies. And of course, you can have whole banks of conventional frequencies (digital and/or analog).

So do you agree that your friend could be wrong?

Oh, btw, I'm ignoring the NOAA weather alert, marine, GMRS/FRS, Aircraft, HAM, etc., which you can do at the same time.

---
* Download a 30-day free trial copy from
http://www.starrsoft.com/software/Win96/
Try it, like it, pay for it (very reasonable) within 30 days.

** Go to the site and see what they list for your area (free access to this). If what you see seems right, get the premium and you'll be able to download it all from within Win96.

***You can actually combine systems into one bank under certain circumstances, but explaining that is another whole thing.

I know he used radioreference for it and I gave him the cable which I already had a spare of to begin with plus $30 for the program set-up. I'm just a little leery to go giving it back to him because he kept it for somewhere around 6 months. He told me he really liked it although he's a Bearcat type user and used both in his vehicle as he's on the road alot. I suppose I could go into the owners manual and look a little closer to see about programming in my conventional channels as (hopefully) to do that I won't need the computer stuff... Am I somewhere close or is this easier with a computer. I'm sure it probably is but I'd just like to stick with manual programming for now if it's possible, I'm sure I could bring it back to him, I'd just like to avoid it for now unless it's necessary.

Really Simple

Set the RX mode to MOT next to the frequency and it will receive analog or digital.

Hi, I never could figure out how to program my scanner for digital and had a friend more into radios do it for me. When I first got the scanner I had programmed in some regular frequencies in my area that weren't digital and then there was no way to program in the channels for digital that were already in the owners manual for Connecticut State Police. Anyway, he got it working and said he figured out what I did wrong in the beginning but I have no idea what that was now. I asked him if it was possible to program in these ordinary frequencies and he said no. It's been so long now I can't remember for sure but I think he did tell me he programmed in everything that was in the owners manual so I probably have states in there I'm not going to be using although I do go to Illinois fairly frequently so everything between here and there I'd likely want. I'm kind of miffed now because this would mean I would have to carry 2 scanners to listen to
the local FD and on the packaging for the scanner it says something about it was capable of close to a gazillion channels. haha I there any chance he was wrong?

As I said, programming from the keypad is nearly impossible (and in fact, on some systems, it IS impossible), whereas programming it from a computer is easy (and in fact, you can get by with doing no actual programming, by merely accepting the gift of someone else's programming and loading it into your radio).

Using the computer program (and most of us here can't live without Win96), you won't need the manual at all. You won't need to know how to enter a trunking table from the keypad, etc.

Bottom line: Unless you are a completely hopeless masochist, get Win96, the cable, and the .p96 files.

AAaaaaaaaaarrrrggghhhh!! Now I'm really miffed. I thought this place was for answering questions people may have with problems they're having with this particular radio.

OK, let's go with that then. I'm a masochist and dumber than a wheelbarrow. If that makes you feel better I don't mind one bit. What I do mind is you're completely disregarding everything I've already described in detail. This may be the greatest software ever but I've just had too much trouble trying to get it to work and it isn't for me. That's why I got this other guy to do it for me. I'd like to know if and how it is possible to program this radio with conventonal frequencies manually? That's it. Like I've said I already paid 30 dollars and given up one cable for this other chap to program my radio through radioreference and he told me it was full up, no possible way to get any conventional channels into it. I've only been reading the posts here for 2-3 years wondering about that statement and I know that is not true now and just thought I'd ask for some help. I'm already out close to $55 for services so far and also he made off with my owners manuals giving me barely readable copies as replacements plus he kept it for over 6 months while he was programming it. I'd just as soon not ask for any more "gifts" of programming (especially after he told me it wasn't possible) if you catch my drift. I also have no computer access for windows as I'm on a WebTV system. There has got to be a way to just get the bare minimum 5-6 channels of my local FD into this thing without having to pony up once again for software I don't need as the CSP digital is already programmed. I know all the conventional frequencies I want programmed. Just need to know how to do it. If it can't be done fine, I'll carry 2 radios for eternity.

14128. RE: [PRO-96] Re: Regular programming

Yahoo group: PRO-96 (2008 — 2017)
Date: 2010-09-23 01:25:43 UTC
From: Rick Bates
Topic: 14121 Message: 14128

Push Man and go to the channel slot that you would like programmed (MANual, channel number, MANual).

Push PROGram once to enter the program mode (pressing it again ups the channel number by one).
Enter the frequency that you want to hear, followed by ENTer.

If there are more channels to program, press PROgram to bump it up by one channel or start at the beginning again.
When you're done, press SCAN.

Now you can stop being cranky.

From: tiny_lund
I'd like to know if and how it is possible to program this radio with conventonal frequencies manually?

1. You never said you don't have a computer.

2. If you DID have a Windows computer, this would be easy.

3. I missed, I admit, that you only wish to manually add some conventional channels.

4. I did hear you regarding how this guy basically mislead and mistreated you and you don't want to go back (and I agree 110%).

5. I did hear that you that you don't have the manual, and noted that if you have the computer program and cable, you don't really need the manual. However, that info is of little use to you since you don't have a computer, but you never said that. I do not think you made it at all clear that you were asking here for a manual.

6. IF you had a computer (which I had no way of knowing you didn't), taking the nearly impossible way of programming from the keyboard, would be, as I said, masochistic. I never called you a masochist or any other name. I DID NOT understand that your quest was ONLY to add in some few conventional frequencies; doing ONLY THAT is not difficult, but I did not understand that was all you wanted, OR that you had no other viable option for doing so than the keypad.

7. I said that it's hard to be smarter than this radio; I never suggested that you are dumber than this radio (although I definitely am) or dumber than anything else. Again, I never called you any names (although at this point I'm tempted).

8. Sorry I took my time to try and help you! Remind me never to make that mistake again.

14131. Re: [PRO-96] Re: Regular programming

Yahoo group: PRO-96 (2008 — 2017)
Date: 2010-09-23 10:53:27 UTC
From: Linda Sobers
Topic: 14121 Message: 14131

Tiny,
I am as dumb as a wheelbarrow also.
I come from a family of cops. My dad, my brother and now my nephew. I grew up listening to a plectron.
When our town went digital trunking, my brother and I bought the pro 96. Neither of us knew how to program it and he read the instructions cover to cover. I found a young (key word is young) man who works for the fire department who took both radios, sat at the desk and had the local pd, the fire department and spen manually punched in, in a matter of 20 minutes. We did not need lots of pd or fd in, just the local stuff that we listen to 24 hours a day. We never bought a cable or special program.
My advice to you, if this is all you're looking for, is to stop in the local fd and ask if someone knows how to program a digital scanner and throw him a few buck.
Hope this helped!

Subject: [PRO-96] Re: Regular programming

AAaaaaaaaaarrrrggghhhh!! Now I'm really miffed. I thought this place was for answering questions people may have with problems they're having with this particular radio.

OK, let's go with that then. I'm a masochist and dumber than a wheelbarrow. If that makes you feel better I don't mind one bit. What I do mind is you're completely disregarding everything I've already described in detail. This may be the greatest software ever but I've just had too much trouble trying to get it to work and it isn't for me. That's why I got this other guy to do it for me. I'd like to know if and how it is possible to program this radio with conventonal frequencies manually? That's it. Like I've said I already paid 30 dollars and given up one cable for this other chap to program my radio through radioreference and he told me it was full up, no possible way to get any conventional channels into it. I've only been reading the posts here for 2-3 years wondering about that statement and I know that is not true now and just thought I'd ask for some help. I'm already out close to $55 for services so far and also he made off with my owners manuals giving me barely readable copies as replacements plus he kept it for over 6 months while he was programming it. I'd just as soon not ask for any more "gifts" of programming (especially after he told me it wasn't possible) if you catch my drift. I also have no computer access for windows as I'm on a WebTV system. There has got to be a way to just get the bare minimum 5-6 channels of my local FD into this thing without having to pony up once again for software I don't need as the CSP digital is already programmed. I know all the conventional frequencies I want programmed. Just need to know how to do it. If it can't be done fine, I'll carry 2 radios for eternity.

14133. Re: [PRO-96] Re: Regular programming

Yahoo group: PRO-96 (2008 — 2017)
Date: 2010-09-23 01:32:51 UTC
From: Carleton Reed
Topic: 14121 Message: 14133

Yes Tiny you can program the PRO-96 manually. Here is a Cheat Sheet that I saved.

Pro-96 Cheat Sheet

If system is Motorola Type II or EDACS start with Programming section, if Motorola Type I or IIi, set the fleetmap in the last section prior to Programming.

Programming

Storing known non trunked frequencies

1. Press MANual, Press three digits to get the bank and channel number desired then Press MANual again. (Upper left should read Mxxx for your bank and channel number)
2. Press PGM, (upper left should change from M to P)
3. Enter the frequency using the numbered keys in the format xx.xxxxx, xxx.xxxxx or xxxx.xxxxx.
4. Press ENTER.
5. If needed, Press MODE to change the receiver mode.
6. Press PGM, the scanner moves up one frequency slot. Repeat steps 3, 4 and 5 then step 6 again until all desired frequencies are entered in selected bank.

Storing known trunked frequencies
1. Press MANual, Press three digits to get the bank and channel number desired then Press MANual again. (Upper left should read Mxxx for your bank and channel number)
2. Press PGM, (upper left should change from M to P)
3. Press TRUNK
4. Press MODE until Motorola or EDACS is displayed for the appropriate trunk type.
5. Press PGM
6. Enter the frequency
7. Press Enter
8. Repeat steps 5 through 8 until all frequencies are entered in selected bank.
Note:1. EDACS frequencies are never programmed in the 00 channel in any bank and must be programmed in the correct listed LCN as listed in the reference you are using.
2. Motorola requires only the control channels entered.
3. More than one trunk system may be stored in a bank, provided it is seperated by a conventional channel.

For VHF and UHF 400/500 additional steps must be set as follows:
1. Press PGM
2. Press TRUNK
3. Press FUNC + 2
4. Key in the Base freq then ENTER
5. Key in the 3 digit Offset then ENTER
6. Using the up/down, find the correct Step on line 4, then ENTER
7. Press FUNC + 3 for 3600 CC Mode or FUNC + 4 for 9600 CC Mode
8. Using the up/down, find the correct setting on line 4, usually Table, then ENTER
Press SCAN

Storing known Talkgroup ID's
1. Press PGM
2. Press TRUNK
3. Enter the 5 digit Mot or 4 digit ED ID
4. Press ENTER
5. Press Up button
6. Repeat steps 3, 4 and 5 until all are entered.

Storing known Text Tags
1. Press Manual, Press three digits to get the bank and channel number desired then Press Manual again. (upper left should read Mxxx for your bank and channel number)
2. Press PGM, (upper left should change from M to P)
3. Press Text, the cursor appears on line 3.
4. Using the numbered keys text in the line up to 12 characters. The letters above each number will help in the selection. Example, POLICE DISP (11 characters counting the space) The first letter is P, Press the number 7 then the number 1 for P. (7 will open the four numbers PQRS and by selecting 1 is for the first of these four. A 7 then 2 would get the letter Q. Presses up or down to move the courser back and fourth or to correct a mistake.
5. Press Enter
Note: Chart on page 48 for other text options.

Scanning Banks
Turn Radio on, the last bank(s) selected will start scanning.
Note: If the radio was in search mode when turned off, the radio will continue that search pattern when turned on until Scan or manual is pressed.

To change scanning banks.
1. Press the number associated with desired bank. The number on top line of display will either be on or off accordingly.

To change from Open Mode to Closed Mode (or the reverse).
1. Press FUNC + 5 (Bank Open or Bank Closed will display).
Note: The scanner will not stop on any TG id's which are Locked-Out, OPEN or CLOSED modes. In OPEN mode, all others will be scanned and CLOSED mode only stored (see below) unlocked id's will be scanned.

Talk Group ID's
These are Identification assigned by the manager of the system you desire to scan. Note, for Type I or mixed Id's see Programming Fleetmaps after this section.

Storing unknown ID's
When the scanner stops on a conversion, Press Trunk, the bottom line will indicate where the ID is saved as x-xx, where the first x is the sub-bank number in the bank and the xx is the the location position in the sub-bank, number 00 to 29.
Note: 1. Each bank has five 30 ID positions for a total of 150 per bank.
2. If an ID was already stored, the bottom line will display ID was saved.

Storing Known Type II or EDACS ID's
1. Select out all banks except desired bank ie. While scanning press each numbered bank to deselect it except your desired bank.
2. Press PGM.
3. Press Trunk.
4. Press down until bank 0-0 appears at the top with Id no. 00 on the second line.

5. Press mode, if needed for MOT or ED.
6. Enter the ID number, if necessary use the period for a hyphen. Entry will be on line three.
Note: Pressing TEXT after each ID entry will place the prompt on line three again for keyboard text entries. (During scan, these text tags will appear on line four)
7. Press Enter.
8. Press up and repeat 6, 7 and 8 until all are entered.

Motorola Fleetmaps
NON APCO 25 (9600-Baud) Motorola Systems use a fleetmap to help determine Talk Group information. The most common system is an all Type II, which is the default system on the Pro-96 and therefore requires no special effort on your part. However, if the system you want to scan is either Type I or a mixed Type II / Type I system, then you will have to program the fleetmap. Fleetmaps are used to determine the size of Fleets and Sub-Fleets for Type I and IIi systems. Most of these type systems can be found on RadioReference.com web site.

The Fleetmap is broken down into 8 blocks of size codes, which allow different sized Fleets (or Sub-Fleets) to be assigned to each block. Size code 12 uses 2 blocks, 13 uses 4 blocks and 14 uses all 8 blocks. During setup, your Pro-96 will skip to the next usable block accordingly. Note: You must program fleetmaps for these type systems before you can enter any Fleet/Sub-Fleet type Talkgroups.

Programming Fleetmaps
1. Restrict your radio to scanning the bank that contains the Motorola system that needs the fleetmap programmed, using the method previously shown.
2. Press MAN
3. Press FUNC then TRUNK, this puts the scanner in the Talkgroup programming mode.
4. Press FUNC then 8, this your Fleetmap screen and should be default Type II (Block 0 size code. Use 15 for type II S-00. The S is for size and the 00 is for Type II system in this block.
5. Using the information for your system, enter the 2-digit number for the first block, i.e., 04 for 4 etc.
6. Press ENTER, the new block number will appear (remember about size code 12, 13 and 14 previously discussed).
7. Repeat steps 5 and 6 until all 8 blocks are entered. Note: After pressing ENTER on block #7, the radio will return to the Talkgroup programming screen
8. Using the numbered buttons, key in your 1st tag. Note: use (.) for (-) Press ENTER.
9. Repeat step 8 until all are entered (30 per each of the 5 sub-banks)

A final note on Type 1 size codes: Many systems use size code 12 but size code 13 or 14 are rare.

Subject: [PRO-96] Re: Regular programming

AAaaaaaaaaarrrrggghhhh!! Now I'm really miffed. I thought this place was for answering questions people may have with problems they're having with this particular radio.

OK, let's go with that then. I'm a masochist and dumber than a wheelbarrow. If that makes you feel better I don't mind one bit. What I do mind is you're completely disregarding everything I've already described in detail. This may be the greatest software ever but I've just had too much trouble trying to get it to work and it isn't for me. That's why I got this other guy to do it for me. I'd like to know if and how it is possible to program this radio with conventonal frequencies manually? That's it. Like I've said I already paid 30 dollars and given up one cable for this other chap to program my radio through radioreference and he told me it was full up, no possible way to get any conventional channels into it. I've only been reading the posts here for 2-3 years wondering about that statement and I know that is not true now and just thought I'd ask for some help. I'm already out close to $55 for services so far and also he made off with my owners manuals giving me barely readable copies as replacements plus he kept it for over 6 months while he was programming it. I'd just as soon not ask for any more "gifts" of programming (especially after he told me it wasn't possible) if you catch my drift. I also have no computer access for windows as I'm on a WebTV system. There has got to be a way to just get the bare minimum 5-6 channels of my local FD into this thing without having to pony up once again for software I don't need as the CSP digital is already programmed. I know all the conventional frequencies I want programmed. Just need to know how to do it. If it can't be done fine, I'll carry 2 radios for eternity.

Also here is a link that has step picture tutorial from Radio Shack. Goto to this link, then click how to store conventional frequecies.

http://support.radioshack.com//support_tutorials/communications/20-526.htm

My Dick Smith DTE-96 is very very similar to this scanner but will NOT accept the win-96 software,.
The scanner is very easy to programme manually - after 3 days of bewilderment....

Subject: Re: [PRO-96] Re: Regular programming

1. You never said you don't have a computer.

2. If you DID have a Windows computer, this would be easy.

3. I missed, I admit, that you only wish to manually add some conventional channels.

4. I did hear you regarding how this guy basically mislead and mistreated you and you don't want to go back (and I agree 110%).

5. I did hear that you that you don't have the manual, and noted that if you have the computer program and cable, you don't really need the manual. However, that info is of little use to you since you don't have a computer, but you never said that. I do not think you made it at all clear that you were asking here for a manual.

6. IF you had a computer (which I had no way of knowing you didn't), taking the nearly impossible way of programming from the keyboard, would be, as I said, masochistic. I never called you a masochist or any other name. I DID NOT understand that your quest was ONLY to add in some few conventional frequencies; doing ONLY THAT is not difficult, but I did not understand that was all you wanted, OR that you had no other viable option for doing so than the keypad.

7. I said that it's hard to be smarter than this radio; I never suggested that you are dumber than this radio (although I definitely am) or dumber than anything else. Again, I never called you any names (although at this point I'm tempted).

8. Sorry I took my time to try and help you! Remind me never to make that mistake again.

Subject: [PRO-96] Re: Regular programming

AAaaaaaaaaarrrrggghhhh!! Now I'm really miffed. I thought this place was for answering questions people may have with problems they're having with this particular radio.

OK, let's go with that then. I'm a masochist and dumber than a wheelbarrow. If that makes you feel better I don't mind one bit. What I do mind is you're completely disregarding everything I've already described in detail. This may be the greatest software ever but I've just had too much trouble trying to get it to work and it isn't for me. That's why I got this other guy to do it for me. I'd like to know if and how it is possible to program this radio with conventonal frequencies manually? That's it. Like I've said I already paid 30 dollars and given up one cable for this other chap to program my radio through radioreference and he told me it was full up, no possible way to get any conventional channels into it. I've only been reading the posts here for 2-3 years wondering about that statement and I know that is not true now and just thought I'd ask for some help. I'm already out close to $55 for services so far and also he made off with my owners manuals giving me barely readable copies as replacements plus he kept it for over 6 months while he was programming it. I'd just as soon not ask for any more "gifts" of programming (especially after he told me it wasn't possible) if you catch my drift. I also have no computer access for windows as I'm on a WebTV system. There has got to be a way to just get the bare minimum 5-6 channels of my local FD into this thing without having to pony up once again for software I don't need as the CSP digital is already programmed. I know all the conventional frequencies I want programmed. Just need to know how to do it. If it can't be done fine, I'll carry 2 radios for eternity.

OK, I got it working now. Evidently he had programmed in lots of city PD frequencies I was never going to use so I eliminated those and added in my own. I know it's a matter of sitting down and using the owners manual but for me it just never made sense and then initially I had screwed up the programming to begin with by programming in some initial channels and not paying attention to what it was asking me and just hoping things would work out.

Sorry I blew a gasket but things just kept getting more and more away from the subject at hand after 2 days with no real answers that I could use and yes I did take the kidding personal. Again, sorry.

This list is for discussion about anything related to Radio Shack's GRE built PRO-96 Digital capable Scanner. This includes Any and all Software for the PRO-96. You can also place your p96 data files for WIN96 software in the files section.

We are the official recognized List by both GRE America, and Radio Shack, And Starrsoft software For the PRO-96..... Several Members are on this list and Our Sister List.

Thanks for your support

Group Contact, subscribe & unsubscribe info:

From: Steve Kellam
Topic: 3661 Message: 14141

I have had a PRO-96 for about six or seven years. It works wonderfully and I have had absolutely no problem with it until now. I am in the Chattanooga, Tennessee area and the fire departments that we monitor use both vhf and 800 trunking. VHF is mostly for dispatch and paging and the actual response and fireground operations occur on trunking. Until recently all 800 was analog. There are multiple jursidictions using the same system.

I have two problems. A couple of months ago the system was supposedly "rebanded". I have no idea what that means or even if I need to do anything with the scanner. I thought not because nothing seemed to change after this rebanding. However about two weeks after it happened, one of the counties that uses it just stopped working. Then it started again and then stopped. Basically it works sporadically. Maybe three or four days everything is fine and then all of a sudden for a week I hear nothing on the trunking. Then it starts working again and back and forth. Sometimes it even happens mid call where I hear it for some transmissions and not others. The EMS and Police and Sheriff's Department are dispatched from the same call center on the same system just different id numbers and they are fine, never a problem. Any thoughts?

The second problem is altogether different. A totally different county just joined the system and they are digital. Even though they are on the same system they use different frquencies. Not sure how that works but it does. But the transmissions are garbled most of the time. Every now and then they will be crystal clear but mostly I cannot understand anything that is said.

I have tried contacting Radio Shack but that is nothing short of futile. I also contacted three different stores around here since Radio Shack claims they provide technical assistance but they just look at me as though I droppe din from outer space. They are of absolutely no help.

Some research I did claims that there is a firmware update from 2007 that I do not have but I can't figure out if I need it and if so how do I get it? The CPU is F1.2, the DSP-APP is U 1.2 and the DSP-VOC is F 1.0 on my scanner.

Can anybody help me or at least point me to where I might get some help?

Thanks.

You might also have a problem in your trunking table. If they "rebanded", the table might have changed. (Impossible for me to guess what was "rebanded", whether that involved the trunked system, etc.)

Definitely take the link Mark gave you, and hopefully someone will know exactly what you need.

Another source would be RadioReference.com, where you can download the settings, assuming you have the premium membership there and the software for the scanner. (You can also look at the settings with the regular membership or no membership, but you'll have to copy them manually.)

Steve, I'm in Ringgold. I think I have all your problem counties figured out. My Pro-96 is really struggling with the switch to the P-25 digital. If you are talking about Walker County, mine is doing the same thing. Even with a decode of 99%. My Pro106 sitting right beside the 96 has no trouble at all. I have tried 1.2, 1.3, and 1.4. External scantenna, nothing has worked. I'm afraid the 96 is not gonna cut it with this new system.
I will continue to experiment, and let you know. Let me know if you figure anything out.

Hello

To set the 96 to work on rebanded 800 Mhz frequencies you need to do the following through the great program Win96. I believe this is the only way to do this.

Go to the bank you need to change and in the MOT 3600 CC box check Multi table. Then below that click on Extended Tables, then choose 800 MHz Rebanded. Click on OK, save your changes and download to your Pro-96. This will allow you to monitor the rebanded system. You must also make sure you have the rebanded control channel(s) entered into your frequency list. If you have any questions please email me at biblehubby at yahoo dot com

Hi there,
Here in Tasmania, some of our EDACs went encrypted. Suddenly Trunk Tracking went out the window as the cops went to encrypted - no one has the technology to scan those encrypted freqs - well, no layman as it were . I am saying that the cops may have gone to encryption so no more capacity to scan perhaps?

Subject: [PRO-96] need help

I have had a PRO-96 for about six or seven years. It works wonderfully and I have had absolutely no problem with it until now. I am in the Chattanooga, Tennessee area and the fire departments that we monitor use both vhf and 800 trunking. VHF is mostly for dispatch and paging and the actual response and fireground operations occur on trunking. Until recently all 800 was analog. There are multiple jursidictions using the same system.

I have two problems. A couple of months ago the system was supposedly "rebanded". I have no idea what that means or even if I need to do anything with the scanner. I thought not because nothing seemed to change after this rebanding. However about two weeks after it happened, one of the counties that uses it just stopped working. Then it started again and then stopped. Basically it works sporadically. Maybe three or four days everything is fine and then all of a sudden for a week I hear nothing on the trunking. Then it starts working again and back and forth. Sometimes it even happens

mid call where I hear it for some transmissions and not others. The EMS and Police and Sheriff's Department are dispatched from the same call center on the same system just different id numbers and they are fine, never a problem. Any thoughts?

The second problem is altogether different. A totally different county just joined the system and they are digital. Even though they are on the same system they use different frquencies. Not sure how that works but it does. But the transmissions are garbled most of the time. Every now and then they will be crystal clear but mostly I cannot understand anything that is said.

I have tried contacting Radio Shack but that is nothing short of futile. I also contacted three different stores around here since Radio Shack claims they provide technical assistance but they just look at me as though I droppe din from outer space. They are of absolutely no help.

David,

If you have it in closed mode (listen only to what is on the allow list), the list of talk groups MUST be correct. If it is in open mode, you should hear it all.

With a decode rate of 99%, there is pretty much only one reason that it won't decode (presuming you have the talk groups set properly or have open mode on). It's out of alignment (happens with age or exposure to conditions that cause the parts to change values). Digital is great, except that is has no sense of humor (isn't forgiving at all). A visit to a good shop is in order for your '96 for receiver alignment.

What you intended to say is that Kings County SO went to digital and that you are decoding them. It would be illegal in the US to decrypt unless you were authorized. The Pro-XX96 can decode digital, but it can't decrypt.

Encryption is akin to scrambling in the old days, but it works far better.

There seems to be some confusion with terminology.
Perhaps if you say that a receiver / scanner can receive and you can understand both analog and digital signals on that receiver / scanner but not encrypted transmissions.
In South Australia we have all three forms of transmission on the one motorola trunking system.
Analog, digital unencrypted and digital encrypted.
My DTS 96, which is a PRO 96 with the Australian band plan, happily receives Analog and digital unencrypted and ignores digital encrypted signals.
My understanding of the Motorola encryption is there is a new encryption code passed between the mobile unit and the base each time the mobile unit logs on and is identified by the base unit with each unit having a unique ID. so I find it hard to believe that the casual listener can listen in and certainly not on a PRO 96.
We have had instances of police mobiles unit being stolen but are locked out as soon as they attempt to log on.

Just so we're clear. You cannot monitor encrypted communications. I am not sure of another King county, other than Seattle Washingtons King county? But they can't be monitored if they're encrypted. If they're digital, but not encrypted. Then yes, they can be monitored . If by I.D code you mean talkgroup(s) then yes, it's that simple.

When a radio is powered up, it logs on and exchanges information with the system control. Each radio has a unique identifier. If the system allows it (knows that radio AND it's authorized to use the network) then the radio is logged into the system (and tracked as it changes sites from moving around). The radio 'works'. If a radio is NOT authorized (i.e. a stolen radio, now locked out), the radio won't work (is ignored by the system, nothing is passed from the radio). This is true for analog and digital radios (each has a digital component).

There are two ways to exchange keys for en/decryption. The first is very common; preprogram the radio with the key (not the same as the radio identifier code). This means that EVERY radio that must use en/decryption has to be sent to the shop for programming or the crew goes to the radio site. Expensive in staffing costs, but secure.

The second way is to allow the exchange of key data over the radio path (it's digital, the user doesn't hear it and is unaware of it). Not quite as secure on the one hand because an eavesdropper could, in theory, also get it and spoof a radio code to gain system access; on the other hand, the key can be quickly replaced if compromised (like changing your login password); key exchange doesn't work if the signal is marginal (that user may not get the key information until in a better area). But it is cheaper in staffing costs (no radio shop reprogramming).

Once the key is programmed into the radio, the user MAY have an option to go to secure operations (encrypted) or normal. This depends on the policies of the system managers, which may decide to leave it encrypted all the time (no user switch).

If an otherwise authorized user does NOT have the encryption key, they will not hear the traffic (they'll hear nothing).

To recap what can be done with the GRE (Pro/DTS-xx) scanners (legally in the US, not Oz): A listener may deCODE digital audio but only an authorized user may deCRYPT an encrypted signal (on any frequency, for any service). The old days of being able to listen wherever and decode what one wants is long gone. On the other hand, if one keeps their mouth shut, how would it be found out what one is doing?

Rick

From: brian_goldjazz

There seems to be some confusion with terminology.
Perhaps if you say that a receiver / scanner can receive and you can

understand both analog and digital signals on that receiver / scanner but not encrypted transmissions.
In South Australia we have all three forms of transmission on the one motorola trunking system.
Analog, digital unencrypted and digital encrypted.
My DTS 96, which is a PRO 96 with the Australian band plan, happily receives Analog and digital unencrypted and ignores digital encrypted signals.
My understanding of the Motorola encryption is there is a new encryption code passed between the mobile unit and the base each time the mobile unit logs on and is identified by the base unit with each unit having a unique ID. so I find it hard to believe that the casual listener can listen in and certainly not on a PRO 96.
We have had instances of police mobiles unit being stolen but are locked out as soon as they attempt to log on.

There is no reason that animal control needs encrypted traffic but law enforcement might (so a drug dealer can't determine when a raid is going to happen by listening to a scanner). In some places they are different branches of the same agency. Since the animal control officer doesn't need to hear SWAT traffic, they won't be able to decrypt.

However there are times that they might need to talk with each other (vehicle versus horse call; animal abuse callout needing LE backup; LE needing animal control to remove a dangerous dog). If one side was locked into encryption 24/7 and the other wasn't able to encrypt, they can't talk to each other. There would have to be other common talkgroups for interagency or inter-department traffic without encryption (turn it off manually, or perhaps the system can manage that automagically, I don't know). It's simpler to allow the user to switch encryption on and off and that action reminds the user that anyone can hear the traffic (you're not secure, don't let that SWAT raid comment slip out).

The nuts and bolts of it is pretty cute too. One special bit set (turned on) in the data stream is enough to tell the radio "Hey, route this packet through THAT algorithm before THIS one". THAT is the en/decryption routine; THIS is normal decoder. If a radio doesn't have THAT routine, it won't hear the traffic (fails the decode routine so it isn't converted to voice).

For one agency doing a single task, with no other network users, I can't come up with any disadvantage other than it would take a few (not noticeable) moments longer to encrypt, then decrypt before decoding the data stream. For most day to day operations of a typical multi-agency shared use system, it wouldn't make a lot of sense to lock it on full time. It's an agency choice and it doesn't always have to make sense.

If it were a single business of several on a shared network, it could make sense because only that business would have the key and they might need/desire secrecy (think Cisco, Apple, Intel and AMD on a shared system in this example none wants the other company to hear). Another business could use different key by programming their radios and letting the network simply pass the packets around (a very expensive router). Which should tell you that it's possible to have a 'paramedic key', 'SWAT key', and 'wants/warrants' key and maintain individual agency security too. Right hand: left hand.

Actually I guess you could use the close call feature to listen for a close by public safety radio even with encryption being used. But as Joe points out, you'll probably hear the sledge hammer hit the door first. And the real planning is done and reviewed with everyone back in the squad room.

Btw, the mono cable is good enough for the 96/2096 family. The stereo cable is needed if you want to clone scanners in the PSR-500/PSR-600/ PRO-106/PRO-197 family of scanners (which of course won't clone to a 96 or 2096).

And to further clarify, Scanning Commercial Radios (not the retail "scanners"referred to by MCH/Joe M.) that DO decrypt can be obtained legally in some cases. Check with your local authorities if you have reason to believe that your using one benefits your community, or you know someone in power that can declare you as an "authorized user". Also check the live scanner feeds on the Internet.

Man what I would not give to have things back to like it was in the old days VHF and UHF, simple programming and low cost scanners. Now you need to take out a small loan to buy a scanner and then find someone smart enough to program it.

So has anyone tried the new Home Patrol scanner?

"Old days" has different meanings for different people!

My first "police radio" was not a scanner at all; you tuned a dial just like an "All-American Five".

Several years later, I had a Regency 20-channel, into which you put crystals, bridging A-B for VHF or B-C for UHF (never filled all the channels). (Being able to receive both VHF and UHF on the same scanner was really "something".)

I then got a Bearcat handheld. Bearcats took 10.8 crystals instead of the 10.7 that everybody else used, so getting the less common ones was a problem (usually mail-order or special-order--lonngg before the Internet.)

I moved from the Regency to a Bearcat programmable--ten channels. From there to a 100-channel handheld that started getting a little weird after being carried everywhere for eleven years.

My Pro-96 did nothing but analog/conventional for the first year, but then I was ever so glad I'd popped for the digital/trunking when the fire dispatch cooperative for 12 cities went digital/trunking.

14174. Trunked Reception Issue

Yahoo group: PRO-96 (2008 — 2017)
Date: 2010-10-12 21:17:14 UTC
From: billtuttle@aol.com
Topic: 3661 Message: 14174

My Pro-96 had been successfully picking up trunked digital for years, when several months ago, it began producing only squelch-like sounds on the digital talk groups. There has been no rebanding. The scanner successfully receives individual digital non-trunked frequencies, however. I'd take the unit to Radio Shack, but I'm not sure they know the product anymore. Anyone ever heard of an issue like this with the Pro-96?

From: Walter C. Powis, Sr
Topic: 14175 Message: 14175

Hi All,
This is my first post so let me tell you something about myself. I am retired from Johns Hopkins University Applied Physics Laboratory after 31 years in electronics. Presently, I am the senor pastor of a local church here in the Baltimore, Maryland area. I have an amateur radio license with the call of W3WP. All that said, here is my present problem. I am the proud owner of a PRO-96 scanner. I just got it through "Freecycle" and of course, it is used.
When I turn the PRO 96 on it displays, "DSP LOADING" "Boot: F1.0" It will then display the "Welcome To Digital Trunking PRO-96". The PRO 96 has been "initialized" so it then displays the "M000...D.+FM", "0.00000", Bank 0 Ch 00". Here is the problem: Nothing that I do on the keyboard will bring any response on the display. The "light" button does NOT work. It is like the keyboard is locked out permanently. A few days ago, it worked for several hours, I turned it off for the night but the next day when I turned it back on, the keyboard was inoperative again. When it was working, I could program it and everything. Anyone have any ideas? One thing that I did learn while it was working is that it is a neat little scanner. Is there a service manual and full schematic available for this unit so that I could check a few voltages? Thanks in advance for you help.

1. Now you know why you got "such a good deal" on this.

2. From my experiences with similar keypads, my first guess would be it might need cleaning inside, where the rubber meets the circuit board (wipe with Q-Tips, no cleaner). Beyond that, you're already beyond me.

However, I believe there's a key combination that locks the keyboard (can't verify that right now). Doesn't sound like that's your problem, unless it's somehow turning itself on and off.

3. In the hope you'll get this working, let me note that the only rational way to program one of these things (if you're doing more than a handful of conventional frequencies) is with the computer program Win96 from Starrsoft.com. You'll also need the cable, RadioShack p/n 20-047 or an equivalent. You'll want to look at RadioReference.com for your local setups (with the above plus a premium subscription to RR, you can download directly into Win96).

Hi All,
This is my first post so let me tell you something about myself. I am retired from Johns Hopkins University Applied Physics Laboratory after 31 years in electronics. Presently, I am the senor pastor of a local church here in the Baltimore, Maryland area. I have an amateur radio license with the call of W3WP. All that said, here is my present problem. I am the proud owner of a PRO-96 scanner. I just got it through "Freecycle" and of course, it is used.
When I turn the PRO 96 on it displays, "DSP LOADING" "Boot: F1.0" It will then display the "Welcome To Digital Trunking PRO-96". The PRO 96 has been "initialized" so it then displays the "M000...D.+FM", "0.00000", Bank 0 Ch 00". Here is the problem: Nothing that I do on the keyboard will bring any response on the display. The "light" button does NOT work. It is like the keyboard is locked out permanently. A few days ago, it worked for several hours, I turned it off for the night but the next day when I turned it back on, the keyboard was inoperative again. When it was working, I could program it and everything. Anyone have any ideas? One thing that I did learn while it was working is that it is a neat little scanner. Is there a service manual and full schematic available for this unit so that I could check a few voltages? Thanks in advance for you help.
Walt

Check for keyboard lock.
Look for manuals and info at radioshack.com

Good luck.

1. Now you know why you got "such a good deal" on this.

2. From my experiences with similar keypads, my first guess would be it

might need cleaning inside, where the rubber meets the circuit board (wipe

with Q-Tips, no cleaner). Beyond that, you're already beyond me.

However, I believe there's a key combination that locks the keyboard (can't

verify that right now). Doesn't sound like that's your problem, unless it's

somehow turning itself on and off.

3. In the hope you'll get this working, let me note that the only rational

way to program one of these things (if you're doing more than a handful of

conventional frequencies) is with the computer program Win96 from

Starrsoft.com. You'll also need the cable, RadioShack p/n 20-047 or an

equivalent. You'll want to look at RadioReference.com for your local setups

(with the above plus a premium subscription to RR, you can download directly

into Win96).

A similar question in the past couple of weeks received a reply suggesting

you take it for a tune-up.

As for RS, I don't think they ever knew this product except to sell it. Find

a local radio shop.

Walter have you tried Pressing FUNC then the light Button - this locks & unlocks the Keyboard - depending on if your Key beeps have ben turned on or not - played with mine today & when I presses the other buttons they beeped - but nothing happened while the Key lock was on.
Hope this helps
Andrew.

Here is the website to download all the manuals for the PRO-96. It also has a link to the download for the upgrade.

http://support.radioshack.com/productinfo/DocumentResults.asp?sku_id=20-526&Name=Radio%20Scanners&Reuse=N\

Also, download WIN96 software (www.starrsoft.com) - it is worth the $30 to purchase the sodftware. Finally, go to Radio Shack and purchase the Radio Shack 20-047 USB/Scanner Interface cable. Works great with the Pro96.

It does talk in the manuals about how to lock/unlock the keyboard, so that could be your problem.

Also, replacment parts are still available for this scanner thru Radio Shack, so worest case, you could order a new keybaord.

Hope this helps.

14189. RE Inoperative keyboard

Yahoo group: PRO-96 (2008 — 2017)
Date: 2010-10-14 13:05:49 UTC
From: Jonathan Rice
Topic: 14189 Message: 14189

I had the same problem with mine - either all the keys would work or none. And it was intermittent. I cleand the kepad/IC interface - no joy. I ended up sending it in to radio shack for a tuneup which went well, except the keypad wouldn't mess up for them. They did align the receive though and I was able to trunk track MUCH better.

You can take the radio to a Radio Shack store and ask that they send it to the service center. When I do this I remove everything from the radio, antenna, battery door, battery pack, etc... they don't need this stuff to fix it and it is just one more thing to keep track of. I also provide a suitable box for shipping and I note the serial number of the radio on my documentation. Then I put a short, friendly note with the radio describing the problem I need fixed. Once I even got a call from the radio tech telling me what he had done - that was a surprise!

I cant tell you what your charges will be but when I have done this it has been about $50.00 - which would still make your free radio a good deal. If I had a service manual I would look for whatever the source voltage is that the keypad uses and try to find out why it isn't getting it. I don't think the problem is the keypad itself.

Oh, and yes I did try all the resets - no joy.

Jon - SW MI

From: Rick Bates
Topic: 14175 Message: 14191

If you can temporarily make it work by quickly cycling the control several times (up, down, up, down etc.) then its dirt or corrosion causing the problem (although the actual control surface can wear out). If the control is dirty (noisy audio when the volume is turned, sporadic audio when left alone) then you can carefully open it and spray some "DeOxit" into the control (not the knob, into the actual control inside the radio), then move the control around (no power attached) to smear it onto the internal surfaces. That removes a lot of the crud that builds up (dirt, bimetal oxidation). Do NOT breathe it, it won't do YOU any good.*

DO NOT use WD40, as it leaves an oily residue, which is bad (collects more dirt for one thing). It's also a solvent so other bad things could happen. A radio shop or an electronics shop should help you find an appropriate product.

Failing that, a service call is in order to replace the control. Ask them for an alignment at the same time (worth the shop time).

Rick WA6NHC

IRLP 7962

* Rick's rule for solvents or similar compounds: The faster it evaporates, the more harmful it is to you. While not a complete rule to live by, it's accurate 90% of the time so can be trusted as a good guideline. I used to work with some pretty good hazmat techs and they couldn't refute this guideline. It's better to be safe now than die of an obscure cancer in 5-20 years.

While having a keyboard is rather critical for correct operation, if you have the software, you can at least program it and have the ability to enable/disable banks or channels by simply zapping a new program load into it. There is an off chance that it will clear what is causing the keyboard to not work by overwriting the memory.

No there is no publically available service manual available that anyone has said yet. If one is found, please post it.

Depending on what you did in physics and electronics, you'll understand that randomly occurring errors or failing parts is frustrating at best. If you're a decent technician (no insult suggested, I've seen physicists that couldn't tell a diode from a resistor), you can open it up and check for the obvious (spills, crumbs or previous owner 'modifications'). Use a good magnifying glass.

If the case appears stressed, it's likely a broken trace or solder joint from being dropped or otherwise damaged. Examine carefully (you can't hurt it by staring at it). That the keyboard worked for you once is a good sign, figure out what was different (warm/cold, different power source, it got dropped). CHECK THE POWER CONNECTOR if using a wall wart supply, it could be the wrong size connector, dirty contacts on the connector (radio side) and/or inadequate supply (9V not 12V).

As you've tried all the normal software and hardware means to make the keyboard work, try applying pressure (or twisting the case slightly) to see if there is ANY change in status. If you can make ANY change at all, that is indicative of a bad connection (or several). It could be as simple as a connector being dirty, battery spills, a weak/failed component or a cold solder joint (apply pressure with a rubber eraser on components and traces, not your finger or a tool). If you have freeze spray, see if that makes any changes.

If you're not able to work with surface mount components (a wise person knows when to stop, I don't 'do' surface mount), then STOP THERE and button it back up for shipping (only the scanner, no antenna, no battery pack, nothing else). Insure it for the cost of a new equivalent scanner (~$600) in case it gets lost (it happens, it wouldn't be a BAD thing in this case). Include your serial number, address, phone number and a description of the problem (put that INTO the box attached to the scanner) and ask for an alignment after the repair. Pre-authorize for $100 to speed the process (credit card info too). That's a couple hours of shop time and should be enough, if not they'll call you. Then you choose what the value really is to you. The scanner is still worth ~$250-300 depending on supply. It does most of what people want to hear (except LTR, no big deal around here unless you want to hear the local termite guy).

Good luck es 73,

Rick WA6NHC

Hi Walt,

I assume that you have already tried FUNC-then-LOCK (the key symbol next to light symbol).

Because you noted that the LIGHT button doesnt even work, the next thing I would do is to make sure the batteries are charged, and that the charger and all battery and charger connections are good and clean. I would try a fresh set of alkalines, remembering of course not to accidently charge them by plugging the wall wart into the scanner. 96's have had known problems with the charger jack which includes a switch.

Also have you tried both the Reset and Initialize (again) on p113 of the manual, and the Startup Key combinations (enterred during the WELCOME screen display) on p 126 ?

Good Luck

This seems to be a fairly common problem with the 96. I too have been plagued by it. I n the ones I have seen, there appears to be a capacitor locking up. The only fix I could find was to remove the battery pack and turn the radio on and leave it for a while. I've had them unlock in a couple hour or it could take a day.

Hi All,
I really appreciate all of the comments on this subject. I have kept all of them in my mind as I journey through this problem. One thing that I did the other day that told me something was I placed the PRO96 in a plastic bag and placed it in the refregerator for a few hours. When I removed it and turned in on, it worked with no problem. It did so for an hour or so and then the problem returned. My suspiction is that the problem is a cold solder joint or loose connection. I have checked all of the connections and they are good. My next test was to take the PRO96 apart and put only part of it in the refrigerator. What I found was when I put the CPU Board (Keyboard & Display) in the cold for a few hours, reassemble the unit, it will work for an hour or so. When I placed only the main board into the cold for a few hours, I still had the problem. So then I sprayed "freeze mist" at various places on the CPU Board to see if I could get it to work. It appears that the "sensitive" region or area is the IC204 so I am in the process of removing the metal cover on the board so I can look at the individual components. I do have experience with "SMT" (Surface Mount Technology) so I will see what is up. That is where I am right now and will let you know what I find. I realize that to many this is going "where angels fear to tread" but since I pastor a church here in Baltimore, that is where I tend to live most of the time anyway!
Thanks again,
Walt Powis, Sr.

From: Walter C. Powis, Sr
Topic: 14202 Message: 14202

Hi All,
I am still working on my Pro-96 and need some further info. If anyone has an AC adapter for the Pro-96, could you be so kind to plug it in to the wall and measure the DC voltage out of it. I am just curious as to what the open circuit voltage is. I know that the manual specs a 9 volt, 300 ma adapter but I would like to know what the unloaded voltage is. I appreciate whatever help provided.
Thanks,
Walt Powis, Sr.

My meter is bouncing between 10.95 - 11.07.

Adapter is a RS 273-1767 which proclaims itself to be 9v 300mA.

The wesite with the Win96 software (www.starrsoft.com) has a link to the factory originally installed V-scanners. V-scanner 5 includes Baltimore, City and Counfty, Anne Arundel, Howard, Frederick, Easern Shore and Ocean City in Banks 2 - 7. I think V-Scanner 6 has Montgomery and Prince Georges counties.

Hope that helps,
     Ted

Hey folks,

I just received a used Pro-96 and I wasnt to reprogram the scanner to be similar to another that I own. When I attach the USB to Serial cable to the scanner, it reads "CLONE MODE - Up to send - Remove cable to exit." When I attempt to run an upload fro PC to the scanner, I am told communication failed because of the Port. I've programmed my scanner before and this is a new USB to Serial cable.

Any ideas what I am missing?

Thanks,
Ted

Are you using computer software? If so, what title?

Have you configured the computer and/or the software to see the cable properly? (Requires the cable be assigned to a serial port, IIRC.)

Confirming you have the correct cable (RS 20-047 or equivalent)?

You have to have the cable specifically designed for the PC interface for that scanner - if you plud in a wrong one it will show "clone mode. Radio Shack sells the 20-047 scanner interface cable, and it works fine, although during setup you may have to "tell it" which port you will use (instructions & install disk are included)

The cable needs a converter board, so AFAIK, it can't be handmade.

RS item 20-047 is not frightfully expensive.

Here is the link to the ebay site that I bought my cable from, it has gone up
a bit since I bought mine but still well worth it.

I am running both a Pro-96 and 97 and have lost TAMU PD on both scanners. I reloaded RR and still nothing. I receive their EMS calls, but not PD.
I did the re-banding thing and even loaded the700mzh stuff.

Anyone have any suggestions?

THANKS
Hank

From: newnethboy
Topic: 14245 Message: 14247

That's a trunked system, so it'll be necessary to program the whole system into the Pro-96 and then select the talkgroups you want for the TAMU agencies (see RR>TxWARN>College and University Talkgroups). Sorry, but your Pro-97 will do you no good here.

There's an interesting note on RR:

--
Talkgroups on this system less than 4096 may simulcast on both this system and the TxWARN Motorola system if users are affiliated with both the Motorola and P25 talkgroups at the same time. Multiply the P25 system talkgroup ID by 16 to determine the equivalent Motorola system talkgroup.
--

So it might be that you can program to the Motorola system if they're affiliated with that. Or maybe that's what you've been doing, but it's now no longer in use.

Like Ken, I'm not there, so I can't confirm any of this.

14250. RE: Texas A & M

Yahoo group: PRO-96 (2008 — 2017)
Date: 2010-12-02 16:53:10 UTC
From: Jonathan Rice
Topic: 14245 Message: 14250

I might have missed this but the first thing I would check is if I were receiving the control channels. My 96 went deaf in the UHF and would barely receive VHF until I sent it in for service.

And again, I'm nowhere near you so this is the best response I can give.

Good Luck!
Jon

From: robby_simmons
Topic: 14257 Message: 14257

I think this is apropriate since I have seen others post before? I am selling my Pro 96 with all of its accessories. It is complete including the uplad cable, battery pack for standard and NiCad, antenna, charger, and case. It is like new and fully functional with no issues whatsoever. I got a new Home Patrol for Christmas so one's got to go. Please contact me if interested. I would like to get $300.00 for all of it. I live in St. Charles, MO and would prefer to sell localy to avoid any shipping issues. I will be posting on CL but wanted to give group members first crack at it.

Thanks All!

Robby Simmons

I may be contacted on my cell at 314-757-0357 or via e-mail at robby_simmons@....

I think my 96 received a dose of water from the past rain storms here in CA. All I get now is static and no reception.

Question - Is it worth the price of a Radio Shack repair (whatever that is), or should I toss my unit? Thanks for any input.

Harold

I can't tell you how much it will cost to get it fixed (or if it can be fixed), but don't forget that your alternatives are to buy a new $500 scanner (actual price $350-400 if you shop carefully and aren't in a rush) or to buy a used Pro-96 or equivalent (currently seem to be running about $150-200) and hope you get a good one.

Before making any decision, though, try this: Remove the antenna, use a good tuner cleaner on the inner and outer contacts (wire and nut), and see if that happens to fix anything.

Harold,
One other thing you might try is to put it in a "warm" place in your home. I would try some place like near a hot water tank if you have one. Give it a couple days to see if it will dry out and any moisture condense. When I worked at Johns Hopkins University Applied Physics Labs, I would put something like that in an oven set to about 100 degrees F for a couple hours, I don't know if you have ever had yours apart but there are quite a few places in it that you do not want water or condensation to be. I have worked on mine and have had it apart more than I care to mention. If you are the least bit shy, don't try. When its all said and done, you may find someone that might be interested in it for the parts.

Hi Harold,
A little water shouldnt hurt it. Open the covers and let it dry out. Now if it was submerged or has salt water in it, thats more complicated. I'm not sure what RS charges, or if it flat rate or by the hour. If you want to toss it, I would consider buying it from you. Let me know what you want for it.

Subject: [PRO-96] My Sick Pro-96

I think my 96 received a dose of water from the past rain storms here in CA. All I get now is static and no reception.

Question - Is it worth the price of a Radio Shack repair (whatever that is), or should I toss my unit? Thanks for any input.

Harold

14270. repair

Yahoo group: PRO-96 (2008 — 2017)
Date: 2011-01-02 14:57:14 UTC
From: Jonathan Rice
Topic: 14270 Message: 14270

I've sent a 96 in to Radio Shack for repair twice and each time it's been $50.00. No parts used.

I had one 96 that went deaf on 800 mHz and had poor receive on VHF. The repair shop tweaked it up with no problem.

I always remove the battery door, battery holder, and antenna. Then I write the serial number of the radio on the box I send it in (original box) along with my name.

Thanks guys,

I first noticed a problem on (12/31) Friday and immediately removed the battery pack. I then swung it to remove any residual water, which produced a few little drops and set it aside to decided what to do. After being upset with myself to allow this to happen and reading the post (on 1/2/11) about removing the antenna and appyling tuner cleaner to the BNC connector, which I did. I took a shot and replaced the battery pack (with different batteries), turned it on and "Hot Dog" I got music, oooo - good reception!

Thanks all for the good info. 2011 should bring me a new 106, I hope!

Don't write the scanner off just yet when your area goes 700 system.
In my area they are on it, and use my Pro-96 to monitor. I am not using the control channels, just the channels they transmit on. I don't get the attached data tags, but that's OK.
Not sure what all freqs. will work in there, but I know I have 770.50625 in mine, and pick up our PD on it without
problems at all. As soon as the rest of the country switches over, I'll get a replacement for that one, but for now it works for me.

As far as moisture in it. I have relied on the uncooked rice treatment many times for people who drop phones in toilets.

A risk of being a heretic, I'd urge you to consider the Uniden options, and talk with an owner of two of those models. The people I know who have them love them.

If you then decide to stick with GRE (which is who makes the Pro-96 and Pro-106), I'd suggest you by the GRE-branded version and avoid RadioShack (I'm totally off RS after the insulting way several different employees treated me when all I needed was a replacement belt clip.)

With the cost of these adapters and the cables being pretty low, it will probably be cheaper/easier to replace them. Except for your ham radio adapter, I'd say to buy the RS USB cable (20-047) and be done with it.

I have the RS USB adapter and Win 7 Pro 32 bit. I was not sure how it would work since it was labeled for use with 98/ME/200/XP. I also had no trouble installing the adapter, I just let it search for the correct driver and it loaded and works just fine. I wasn't sure if it would work since & is so new, but it works.

The Pro-96 will receive the 700-band signals, but it won't do trunking on the 700s (doesn't know that language).

So to the extent you can monitor nearby 700-band stuff, you're still good.

I haven't heard that the 700-band is going to be "the new best thing" that everybody is switching to. I don't believe anyone in my area will be going to it (an area-wide TRS that's in the planning/agreement stage is supposed to go unto the 470-482 MHz range).

I never throw away the bags/packets of desiccant that come in the packages with products such as harddrives. I store them in airtight containers and use them to pack with items I'm storing and/or I'm otherwise concerned about moisture.

(I also never throw away wire twist-ties that come on various wires/cables; amazing how handy they can be.)

Hey I'm glad it's working again. Another tip should something similar happen: Place your radio in a dessicator. You don't have one right? Well, you may be able to find the desiccant (the small blue stones that turn pink as they absorb moisture) at a quality hardware store (or online somewhere) and put it all in a larger Tupperware container in a warm spot (my heater room is toasty this time of year). The quicker, easier option is to use dry, uncooked rice (not minute rice!) in the Tupperware - an inch or two will do. Take your battery cover of the radio, remove as much case as you feel comfortable with. Make sure the container is tightly sealed and give it a week or so. I salvaged two cell phones this way that were completely submerged in water!

As much as I've been completely satisfied with Starrsoft Win96, Grant asked for software that will work with two GRE/RS models and a Uniden model. No Starrsoft product does that, nor even does Uniden, IFAIK.

I question whether any software can be designed to work with a range of scanners as Grant is hoping for, since there is no standardization between scanners, to speak of.

From: Grant
Topic: 14305 Message: 14308

It looks like the Scancat software is the only one that will cross the lines and I think there is a demo version of it included with the cable from Radio Shack. The only problem is whether or not it will support all the new rebanding that the Starrsoft software supports for the PRO 96 and 97

Subject: Re: [PRO-96] Re: Pro 96 Software

As much as I've been completely satisfied with Starrsoft Win96, Grant asked for software that will work with two GRE/RS models and a Uniden model. No Starrsoft product does that, nor even does Uniden, IFAIK.

I question whether any software can be designed to work with a range of scanners as Grant is hoping for, since there is no standardization between scanners, to speak of.

Hi Grant

The demo software included with the cable from Radioshack is ARCnnn (Arc96 for Pro96) from Bu-Tel Software B.V. not Scancat-Lite-Plus. There is a demo version of the Scansat software available from http://www.scancat.com/.

I agree that this is probably the only sofware that supports multiple scanners. I just downloaded the demo version and there is a column for "Reband Settings" in each bank. There is also an option "Reband Frequency Shift" under Tools. But you better test that yourself with the demo version.Saving data and uploading data to the scanners is disabled in the demo version.

John

From: Tommy
Topic: 14313 Message: 14313

I was looking thru the messages for a USB cable to program my PRO-96 and found reference to a RS 20-047. I doesn't seem to be in the RS website but I did find a 20-546 for the GRE scanner. Is this what is being used now?? $35 sounds like a lot of money to me. My new laptop has no DB9 connector so my old cable is useless.
Tom

ScannerMaster has it:
http://www.scannermaster.com/RadioShack_USB_Cable_p/22-551123.htm

BTW, the Pro-96 is RS #20-526; you may need to know that to find the compatibility.

The SM 22-551123 appears from the photo to be the same as the RS 20-047. It comes with an adapter, but you don't need that for the Pro-96.

I agree that $35 seems high, but that's what it is.

(SM also has a GRE cable, #30-551238, but it costs more and the description says the RS cable also handles the Pro-96.)

Your old cable is not useless! You can go to radio shack and pick up a gig aware cable, has one end you plug your DB9 into the other end is USB! Hope this helps!

Not sure about this. The ScannerMaster site lists two cables that look alike in the photos: The one labeled as "GRE" says the RS cable will work for "all these GRE" models plus for the Pro-96. We know the RS cable works for the Pro-96, but we don't know that the GRE cable does (and we cause to think it does not).

Bah, Windows 7 is XP fixed, it works fine (for Windows). But do yourself a favor and only get the USB to serial (if that is your choice) with the Prolific chip as they implement the features better (some of my radio software is really picky about that).

Rick WA6NHC

Blame the typos on the iPhone. It's awkward to type on one.

Got my Pro-96 out again today and programmed it for Arizona. It isn't working well, sounds like an intermittent (on a second to second basis) digital decoding issue.

Ran the DSP Test, got the Message "DSP Test 1 Freq/Amp1 FAILURE"

I'm guessing it needs to go in for repairs, who do I call, how much does it tend to run?

Sir,
Drop by any Radio Shack. Tell them your problem, pay the $20 fee and when RS is done with the Repair. They will call you for the balance and RS will ship it back to the Store you went to. And you pay the balance.

Make sure you ship it with nothing with it. Do not send any ant. , batteries. I even took my belt clip off. Do not even send the battery holders

My 96 had a volume POT that was bad. Whole process took a week.
 Thanks,

Bill A. Black, Cordi.

Subject: [PRO-96] Re: Pro-96 Sputtering

Got my Pro-96 out again today and programmed it for Arizona. It isn't working well, sounds like an intermittent (on a second to second basis) digital decoding issue.

Ran the DSP Test, got the Message "DSP Test 1 Freq/Amp1 FAILURE"

I'm guessing it needs to go in for repairs, who do I call, how much does it tend to run?

-Jared

I want to second everything Bill said about sending stuff into the service center and add that I use the original box/shipping inserts and write the radio serial number on them. I also include a short note detailing the problem.

Jon

In my experience, many RS store workers will quickly say, "Can't be done," to anything that doesn't involve big-ticket sales. And Corporate backs them up on this.

This is totally dumb from a business standpoint.

Never could get a new belt clip for my Pro-96 (tried two stores, RS Website, wrote complaints, and never got any kind of reply--this was Aug 2008; I ended up getting ScannerMaster leather case), and since then, I've bought probably $1000-worth of big-ticket items w/o even considering RS (as I won't go in their stores anymore).

I'm not ready for a new scanner yet, and don't know what it will be, but I can tell you it won't be RS.

It may be nothing more than the Pro96 is a mature scanner and is no longer made new. Hence, owners really don't have a lot to discuss. In my case my scanner does what I need it to do most of the time. Using Win 96 and radio reference I've built the files I need for scanning so I really don't have much need for technical assistance. I mainly hang out on the radioreference forum for my home area.

Because of age of the 96, most people have mastered all the issues. Some of the 96's are already dead and replaced by the newer 106. I would think the only people joining this group now would be analog people who just bought a used unit. I've just not bothered with leaving the group even though 95% of the programming I do is now the 106/197. The 106 is new tec and gives you 21 banks of programming with sound effects and colored lights. Larry

OK, I'll ask a question...

I know how to "lock out" a particular Talk Group/LCN that I don't want to hear "Function 5".

Is there a way to "lock on" to a particular LCN that I want to follow?

Thank you in advance.

Hi all,

I have a near new and in perfect condition PRO96 for sale. Open to offers.
This unit has been software updated when I got it about 1.5 years ago. Never been used apart from initial few hours.
Postage from Australia at around $25 registered/insured incorporate in offer please.
Paypal ok.

Cheers,
Al

OK, I'll ask a question...

I know how to "lock out" a particular Talk Group/LCN that I don't want to hear "Function 5".

Is there a way to "lock on" to a particular LCN that I want to follow?

Thank you in advance.

This list is for discussion about anything related to Radio Shack's GRE built PRO-96 Digital capable Scanner. This includes Any and all Software for the PRO-96. You can also place your p96 data files for WIN96 software in the files section.

We are the official recognized List by both GRE America, and Radio Shack, And Starrsoft software For the PRO-96..... Several Members are on this list and Our Sister List.

Thanks for your support

Group Contact, subscribe & unsubscribe info:

Post message: PRO-96@yahoogroups.com
Subscribe: PRO-96-subscribe@yahoogroups.com
Unsubscribe: PRO-96-unsubscribe@yahoogroups.com
List owner: PRO-96-owner@yahoogroups.com

Also, Our sister Group RS_GRE-Digital-Scanner@yahoogroups.com is available for People who want to talk about any of the Radio Shack GRE built or planned Digital capable Scanners.

Please enjoy the list....

Thanks

Go to the Conneciticut State Forum on: www.radioreference.com and post the same question there. Chances are you will get several replys. Also post which town you are in. A neighbor with a 96 may be able to program or clone. Good Luck.

Hello Fred

The Radioreference database should have what you need. I believe you just subtract 15 from the existing freqs to get the current ones. Then you need to set the 96 for rebanding thru WIN96. Works great. Our area rebanded the end of last year and with the info from Radioreference and WIN96 we didn't miss a thing.

Okay, it appears rebanding is going on now as cannot receive CSP on old frequencies. Does anyone know when the Radio Reference data Base will be updated so I can inport into WIN96 and upload to my 2096's and 96? I will check every day but so far the old frequencies are still in their data base, thanks, Gil

Hello everyone,

I have had scanners in the past, and I have had the Pro 96 since it hit the market.

I went from New England, to South West Florida, with my 96. I decided to reset the whole shebang since my scanner was ready to go, out of the box. (pre-programed for the N.E. states)

My problem is, I have NO IDEA what, I'm doing. This is my first experience with a trunked scanner, and I'm more of a hands on learner. (books tend to have no context, until I see it IRL)

My prior experience was to just load up my scanners with the frequencies, and have at it. I am having difficulty getting my head around all the terms, and programing of this one.

Are there any sites with step-by-steps, or something similar?

Any help would be appreciated. Thank you in advance!

See my file in http://groups.yahoo.com/group/PRO-96/files/ : WhatsP96.txt.
This will give you a quick start.

You are far from alone in programming a Pro-96. Many of us simply don't ever program ours from the keypad, but we always use the software. Further, many of us rely on .P96 files others have created.

The software should take you from totally lost to "this is great!" nearly instantly.

Get a cheap pc? Or a friend with a pc? That way you can program it easier with Win96 and have more control of features. You can even set things that cannot be done from the keyboard such as expanded frequency coverage, multiple tables and voltage alarms.

Rick

Tiny iPhone keypad + my fat thumbs = typos. Sorry.

If you're on a powerMac and chances are that you are on one. You can run windows on your mac. Or if you dont' want to install a full version of windows you can get virtual software. Anything windows can do, mac can do better and faster.

Hey JS

I'm a Mac user too and you're right. There is no programming software out there that is compatible.
Save yourself a ton of grief and pick up a cheap windows laptop or even an older desktop.
It doesn't have to be a rocket ship or have a ton of features. I use one for my programming and some other "windows only" programs I own.
I know of people who have tried Parallels or Fusion with little success. There are lots of used Windows machines out there sitting in a corner owned by converts (like us)

Good luck!

Geo.

"Unfortunately for this process, have a mac,"

All I know about this is what I've read but I've heard there are programs you can run on the Apple OS that simulates Windows and lets you run Windows programs. If I say any more than that I'll have to start making things up...

I've been running all my Windows scanning programs on my MacBook using Parallels for years now without a problem. I have seen some say they have had problems doing this, but never heard what exactly the trouble was. Win96, Win500, PRO96COM all work fine on the MacBook and my Mac Mini at home.

You will have to find a good USB-to-serial adapter, or use the USB programming cables for the radios. I think that is where some folks run into roadblocks...

The question about Mac software for the Pro96 and all kinds of other radios comes up often. The vast majority of radio programming software is made for Windows so the trick is to find a way to run Windows. Although Windows is viewed as a virus by many Mac users, it is kind of a necessary evil to do what you need or want to do. There are a few Mac radio programmers out there but they are few and far between. If you spend any real time with a radio you will eventually need to run Windows applications. That last sentence is hard to say for this die-hard Mac guy but it is reality.

There are cheap Windows machines out there that will work fine for most radio programming. Netbooks running some version of Windows XP or Windows 7 can be had for under $300 all in. Just add a USB cable for your radio or a USB-Serial adapter and your favorite program and off you go.

You can also get a cheap desktop system for not much more than a netbook, but that takes up more room and adds complexity. You could probably share a Mac monitor if the Windows box has a compatible connector and you may be able to use your existing Mac keyboard and mouse. You could use a KVM switch or one of the applications like Synergy to share the monitor, mouse and keyboard between the Mac and your Windows box. MacBooks and iMacs however do not have outboard monitors, so unless you have a second monitor you are out of luck for this.

Check your local tag sales, pawn shops or thrift stores. You can find working Windows machines or laptops cheaply there, usually already set up with Windows XP or even Windows 7. (Most Windows people like to avoid Vista...) Just be sure to run a good anti-virus program, AVG and MS Security Essentials are good, free virus programs. Install and run the virus checker before doing anything else on any used Windows computer.

On the Mac itself you can use one of several methods to run Windows applications and Windows itself. This is especially easy if you have a recent Intel powered Mac. Apple's own free BootCamp allows you to boot into Windows or the Mac OS (but not at the same time) and this allows most applications to work just as if the computer was made for Windows. You can also use Parallels or VMWare's Fusion, these allow you to run almost any other OS, including Windows' several versions alongside your Mac programs. It can be set up so that the Windows part is almost transparent, your radio program just kind of runs and you don't even know that it is a Windows application if you don't look too closely.

BootCamp, Parallels and Fusion all require that you obtain a licensed copy of Windows, you will need the install CD and a valid install key. If your radio already has a USB cable then you are all set, otherwise you need a USB-Serial adapter that will work in whatever version of Windows you use. Some USB-serial adapters don't work in Windows 7, make sure yours does, it will say so on the packaging.

Hi,

I'm also a new user of the Pro-96 and my question is how does one know if they need digital and trunking in their area? I live in Santa Cruz county, CA if anyone can tell me what I need for this area and or what the frequencies are I can program them in manually.

I'm not sure I even need the Pro-96 for my area. I have a Uniden BC200XLT; is that adequate for Santa Cruz?

thanks in advance,

This list is for discussion about anything related to Radio Shack's GRE built PRO-96 Digital capable Scanner. This includes Any and all Software for the PRO-96. You can also place your p96 data files for WIN96 software in the files section.

We are the official recognized List by both GRE America, and Radio Shack, And Starrsoft software For the PRO-96..... Several Members are on this list and Our Sister List.

Thanks for your support

Group Contact, subscribe & unsubscribe info:

Hi Rick,

I've been slogging along learning bits and pieces and then came across the GRE PSR-800 which programs itself. They have them on ebay and amazon. Any thoughts on one of those? they look pretty nice and no complicated prgramming involved.

Or because you might be listening to the input of a repeater and the mobiles are out of range. Or that is a dispatch only channel with responses on another channel... One would have to know what you're scanning.

Michelle,

I haven□t looked at one specifically, but I know that the newer GRE line is pretty nice. They apparently do all digital modes for scanning quite well. The programming is of a different style in that you program all your info into it, then select from that to make a scan list. Most folks love them but they are pricey. Since I retired from the FD and moved away from my stations, I don□t even have a need for the PRO-xx96 scanners I own. I moved to the foothills and there isn□t much trunking in my area. In fact, I□m using my ancient pro-2004 scanner for most of what I want to hear locally.

If I were to get another scanner, I□d certainly look at the current GRE line. I□m sure you can gain some opinions from the list, hopefully without brand wars. ;-p

The new Uniden Home Patrol scanner operates with the same principle on no complicated programming and both use the same Radio Reference database. So now you have a choice.
http://www.usascan.com/files/scanners.html or here
http://tinyurl.com/26hobtk

both very reputable online vendors.

There is software for both scanners that runs on your PC that makes it possible (and easy) to add frequencies that are not in RR.

The fact that you're "not totally clueless" is obvious from your posts. Also that you do good research.

Even so (now speaking as not quite a real radio person), trunking is something else again; it's radio like radio never was before in all history. The computer program doesn't do it all for you, but it sure helps a lot.

Two comments about the software cost: 1. Win96 is free for a 30-day trial. (No risk to the vendor, because most of us couldn't live without it after 30 days with it.) 2. Very reasonable when you do buy it.

But you're saying you don't find much trunking in your area. In that case, you can program the Pro-96 as easily as you've programmed any other scanner. (I had mine a year, needing/doing only conventional, before I got the software after the local fire agencies went to trunking.)

As for NoCal groups, try this YG:
http://groups.yahoo.com/group/CaliforniaOnlineScanning/

And finally, the yellow battery box:

www.ScannerMaster.com
They show:
GRE Rechargeable Battery Holder
Product Code: 30-531231

It says this is for the GRE PSR-100, PSR-300, PSR-500 and RadioShack PRO-164, PRO-106. However, it looks like the one for the Pro-96. Ask them before you buy it; I won't guarantee it will work. (Is the Pro-96 the same as one of the listed GRE models? I don't remember.)

From the RS parts list for the Pro-96 (product 200-0526)
http://support.radioshack.com/support_electronics/doc71/71296.htm
Cat.No. Description NP Part #
12228805 HOLDER ASSY FOR RECHG. BT HB90252

"To order parts call 1-800-843-7422 or visit your local RadioShack store." However, I definitely cannot prove that by my experience trying in vain to get a belt clip.

BTW, here's the true info on the battery boxes: Either box will carry either kind of battery and work just fine UNLESS you plug in external power. The yellow box has an extra contact to allow charging--do NOT put non-rechargeables in this and plug in. If you put rechargeables in the black box, they'll work fine, but the in-radio charging won't happen.

True that six bucks shouldn't break a person who owns a $500 scanner, but the original issue here is finding and getting that six-buck holder. ScannerMaster doesn't list them (at least not clearly-identified) and while RS lists them, getting parts from them depends too much on an individual employee's motivation and competence (two qualities not at the top of the list of RS staff qualities).

Yes, I found it on ScannerMaster; this referred to GRE's site.

ScannerMaster's description leaves it entirely unclear that the part they offer fits the Pro-96.

When I first got my Pro96 off of eBay, it didn't have the yellow battery holder or the belt clip - ordered them direcly from Radio Shack, and got them in about 2 weeks. And they weren't bad priced, either. They did te I believe it was support.radioshack.com

14431. Just got a pro 96, would like some info on AC adapters

Yahoo group: PRO-96 (2008 — 2017)
Date: 2011-05-23 22:14:45 UTC
From: bcomplex
Topic: 14431 Message: 14431

Hi, other than the usual wall warts and Universal AC adapter does anyone know if there is another electronics adapter that will work, like I have read for some other units like the 164, some use Sony adapters. I figure as long as it's 9 volt 300 ma and the polarity is right. I wonder about the polarity, if you have an adapter but the polarity is wrong can you just splice the wires and reverse the polarity?
Thanks

14432. Re: [PRO-96] Just got a pro 96, would like some info on AC adapters

Yahoo group: PRO-96 (2008 — 2017)

Topic: 14431 Message: 14432

The radio is happy with 9V DC and > 300 ma with the proper polarity. A higher ma rating is fine.

Some wall warts make noise, some have less filtering which causes the radio to hum and some are great.

If you measure the voltage, the unloaded voltage may be higher. This does not mean the wall wart is faulty. It should be really close under load (plugged into the radio).

Rick

IANAE (electrician), but what you say sounds correct.

DC current is DC current, whether converted by a RadioShack adapter or a Sony adapter.
1. You must have the correct voltage.
2. The amperage must be at least what the device demands (for a requirement of 300mA, 300 will work, 400 will work; 200 will not work).
3. You must have the correct polarity.
4. You must have a plug that fits the jack.

I see no reason why you can't change the polarity by splicing the wires. This will make your adapter a cobbed-up device, but it should work if you do it well (no added resistance due to poor connections, no shorting).

Yes, I've reversed the wires to change the polarity with no apparent ill effect. I've used 9v adaptors with much higher ML rating with no problems. The trick is to find plug ends that fit!

You can use just about any regulated 9v 300 ma (or larger) adapter with the correct polarlty. IF you are sure you know how to check the polarity correctly go ahead and do that. I do it all the time for my radios.

Thanks for clearing that up, it must made sense since there are universal adapters like the one I just bought on ebay that let you set the polarity buy plugging in the tip on - or +. Since know a lot about AC power, can you tell me why one day a universal adapter is working just fine and the next it craps out and the voltage can't be changed and when you hookup a multi-meter it reads like 15 volts? I have had the happen twice now and I wonder if it's something I'm doing to cause it?
Thanks

The ability to provide more milliamps (mA) than is needed cannot damage a device. The important specifications are:

a) MUST BE the correct voltage.
b) Should have at least the required milliampere rating (too low won't typically harm the device, but could burn up the adapter).

Unloaded higher voltage (not attached to a radio or other device) shows little or poor regulation of the power supply, not a rare thing for wall warts. By putting a small load on it, say a light bulb of higher voltage rating, you can measure the voltage to see if/how much it drops.

No, it won't. You could connect a guhzillion 9V batteries in parallel, providing still 9V to your radio and it will only draw (take) what current it needs. The rest is redundant or useful to other devices. The power source doesn't drive the device needs, the device draws from the source ability.

WRONG! DO NOT USE 12V!

Now that I have your full attention:

Michelle's reference to 12V here is to INPUT. She's speaking of power supplies that take from either 110/120V AC or from 12V DC (like for use in a car).

Rated output in Volts must match the device being powered.

Notice the difference regarding the rated output in Amps: As Rick explains, the device will draw what it needs; too little available is not good, but too much will simply sit unused (though it doesn't "sit").

Volts represent "force", and Amps represent "speed". Try this analogy:

Say you have a door with a latch that has a handle, and say that door doesn't necessarily open easily. How hard you turn that handle is important: Too easy and it might not turn; too hard and it could break.

However, the speed with which you turn it makes no difference/poses no risk (assuming that the force you apply stays the same). You could turn it very slowly (think trying to be very quiet) or very quickly (think Kramer on "Seinfeld").

My FD heritage says volts=pressure and amps=GPM. :-)

Too much pressure will bust the hose. Too little pressure and/or GPM will not squirt water well. Too much GPM demand lowers pressure which affects the water stream, usually badly. But matched properly, fires go out (electronics work as designed).

The pressure must match the need and the GPM supply must also meet the minimums. Having more GPM than needed is ok.

A lake (high GPM potential) is always good. Having a pail is bad.

Hi group,

Personally I would never use a wall wart that has more than 1.5 times the required current (ma) rating of the radio, especially if the device has rechargeable batteries that can short out and draw too much current through the radio. (It is always safest for the radio to charge batteries externally.)

Since wallwarts have no fuse, and the radio also has no fuse, the radio and wallwart are only "impedance protected" by the fine wire in the transformer in the wallwart that acts as the protection device. In the case of a radio failure such as a bad battery or short circuit, a wallwart that has too much current capacity would provide excessive current before this impedance protection kicks in, or the fine wire melts (in an extreme but not unusual case), and could damage the radio.

Yes in some cases the internal circuitry in the radio can protect it, but who wants to replace tiny components in the radio or send it in for repair. In the Pro-96 the power jack has been known to melt under high current conditions.

Michelle's reference to 12V here is to INPUT. She's speaking of power supplies that take from either 110/120V AC or from 12V DC (like for use in a car).

Rated output in Volts must match the device being powered.

Notice the difference regarding the rated output in Amps: As Rick explains, the device will draw what it needs; too little available is not good, but too much will simply sit unused (though it doesn't "sit").

Volts represent "force", and Amps represent "speed". Try this analogy:

Say you have a door with a latch that has a handle, and say that door doesn't necessarily open easily. How hard you turn that handle is important: Too easy and it might not turn; too hard and it could break.

However, the speed with which you turn it makes no difference/poses no risk (assuming that the force you apply stays the same). You could turn it very slowly (think trying to be very quiet) or very quickly (think Kramer on "Seinfeld").

So 12v isn't too much?
Thanks

Makes sense: Sacrifice the $10 wallwart instead of the $500 radio.

Hi group,

Personally I would never use a wall wart that has more than 1.5 times the required current (ma) rating of the radio, especially if the device has rechargeable batteries that can short out and draw too much current through the radio. (It is always safest for the radio to charge batteries externally.)

Since wallwarts have no fuse, and the radio also has no fuse, the radio and wallwart are only "impedance protected" by the fine wire in the transformer in the wallwart that acts as the protection device. In the case of a radio failure such as a bad battery or short circuit, a wallwart that has too much current capacity would provide excessive current before this impedance protection kicks in, or the fine wire melts (in an extreme but not unusual case), and could damage the radio.

Yes in some cases the internal circuitry in the radio can protect it, but who wants to replace tiny components in the radio or send it in for repair. In the Pro-96 the power jack has been known to melt under high current conditions.

73
Jack W8JAK

WRONG! DO NOT USE 12V!

Now that I have your full attention:

Michelle's reference to 12V here is to INPUT. She's speaking of power supplies that take from either 110/120V AC or from 12V DC (like for use in a car).

Rated output in Volts must match the device being powered.

Ok that makes a lot of sense, that said, if there is no fuse, then what happens if you use the wrong polarity? I remember once in one of my old Realistic scanners I used the wrong polarity and I think it died.
Thanks

Wow I was always under the expression that highers mili or amps would fry it, thanks for explaining that.

Yes I realized that after I posted, it's like the 12 volt auto adapter, but thanks for the heads up!

Unless the universal one has 300 ma, which most have. I guess it's all a matter of preference.
Thanks

I purchased a Pro-96 off of eBay woth a universal adaptor, and it worked fine - - sometimes! It acted like the plug in the radio was going bad, until I discovered that the adaptor had the wrong plug on it - apparently there are 2 plugs that seem to fit the Pro96 that come with many universal adaptors - both the yellow tip & the black tip will fit the Pro96, but the center contact in the yellow tip is just slightly too big for the contact in the radio - hence intermittent "failure" of the power supply. Check the plug end, and ensure it is the black tip end, and that should fix any issues there. Otherwise any 9 volt adaptor that has a high enough or higher rating than what is required for the unit will work. If you find a 9 volt adaptor with the wrong power plug on it (not interchangeable) you can cut one off of any adaptor and wire it up to the 9 volt adaptor (just make sure you have the polarity right!). I found that most older 12 volt adaptors have the right end on them (again, look for the black band on the tip), and a little solder and tape makes a permanent plug for the scanner.

In my case it's the yellow tip that works correctly so they must not be uniform.
I'm using the adapter that plugs into a 12volt car cigarette lighter outlet.

Well I got lucky since I still have a connector left over from an old R.S. wall wart.

Well I have one that fits nice and snug that I used to use on my Pro 92, funny thing I just found out the universal adapter I thought was shot, works fine, apparently I don't know how to test these things. I just got one from ebay to replace the one I thought was bad and tested it the same way and I thought that one was bad too. To test it I used a voltmeter set on 20, but I wouldn't get the actual voltage, it was way higher so I thought it was bad, I guess you can't read correct volts on a variable adcapter? All I know is that when I tried the adapter on an electric keyboard it worked fine, then I lowered and raised the voltage and it responded. I'm sharing this in case any one else might think they have a bad universal adapter. Live and learn I guess. So I'm good now with two universal adapters that I can use on my 96. I would advise anyone who uses a universal adapter to tape down the voltage selection switch so it does not go any higher,those things can easily be switched.

Now my question is if I have the batteries in the black holder and the AC plugged in is that safe, I"m guessing yes as long as I don't use the yellow holder without rechargeables. Thanks

--- In PRO-96@yahoogroups.com, "Dave" <davejyd1@...> wrote:
>
> I purchased a Pro-96 off of eBay woth a universal adaptor, and it worked fine - - sometimes! It acted like the plug in the radio was going bad, until I discovered that the adaptor had the wrong plug on it - apparently there are 2 plugs that seem to fit the Pro96 that come with many universal adaptors - both the yellow tip & the black tip will fit the Pro96, but the center contact in the yellow tip is just slightly too big for the contact in the radio - hence intermittent "failure" of the power supply. Check the plug end, and ensure it is the black tip end, and that should fix any issues there. Otherwise any 9 volt adaptor that has a high enough or higher rating than what is required for the unit will work. If you find a 9 volt adaptor with the wrong power plug on it (not interchangeable) you can cut one off of any adaptor and wire it up to the 9 volt adaptor (just make sure you have the polarity right!). I found that most older 12 volt adaptors have the right end on them (again, look for the black band on the tip), and a little solder and tape makes a permanent plug for the scanner.

Inexpensive or unregulated power supplies will typically read higher when not under load than when a load is applied so the way to check the voltage is while it's being used. If it read the correct voltage before applying a load then the voltage would likely drop when the load is applied.

As for your second question I think you're safe. Why not just use the yellow battery holder and rechargeable batteries and not have to buy throw away batteries?

From: CA-PI_9112
Topic: 14467 Message: 14467

San Diego, California is the area of coverage that I'm attempting to recall to include all South western states/areas.

I was not able to hear both sides of a conversation and tracking is out.

I tried to "Reset and later Initialized" my radio. Ooops, and reinstalled the local frequencies.

Now here is the problem.

Iam no longer able to track and hear both sides of a conversation.

Any suggestions as to how to resolve this issue?

Thanks in advance.

Anyone in Oakland county MI still scanning anything except MSP? I'm in Rochester Hills and in the last year almost everything has gone silent.... moved to Open Sky. Rochester Hills is patrolled by the sheriff and they have also moved to Open Sky. My poor Pro96 gets near zero use.

I miss being able to turn it on and find out what the sirens (or the PD heli) are all about. An era has ended, I'm afraid.

14477. Solved: Not hearing anything

Yahoo group: PRO-96 (2008 — 2017)
Date: 2011-07-23 22:48:04 UTC
From: newnethboy
Topic: 14477 Message: 14477

Some others of you might benefit from my experience:

I began to wonder if being busy had caused me to not hear transmissions received on my Pro-96; it seemed days went by that I'd heard nothing. Was I really that focused on my work? But no, as I checked it out, there actually had been nothing coming over.

Weird!

I first checked the programming: Everything as it should be, and nothing had changed in the systems I was monitoring (both TRS and conventional, that I had been receiving fine for quite a while).

Also weird was that this seemed to be happening only at my desk. If I was carrying the scanner on my belt, I'd hear things (although I wasn't sure I was hearing everything I should have).

I won't keep you in suspense: Wiggling the antenna (stock ducky) would make the scanner work. So I took the antenna off and sprayed both the antenna and receptacle with tuner cleaner (inside where the pin is and also on the hold-down pins and slots). That didn't quite do it.

I bent the contacts in the pin's hole toward the center, so they'd make a better contact. That didn't seem to make a difference. (I'm not sure how much, if any, they actually bent.)

Finally, I took a hobby file and lightly filed the notches of the hold-down slots and under the pins. That did the trick. Scanner hasn't shut up since.

BTW, I found that a reliable way to check the reception is to put the scanner on manual and set it to a TRS control channel (I have only Motorola programmed). The control channel is always transmitting, plus the Pro-96 gives a signal strength readout.

Sir,

Back in 2006 this problem appeared in a few models. The problem is the LCD Module is failing. You need to send it in to Radio Shack. The LCD Module can not be repaired because it is under a glued area.

Hope this helps

I'm wondering how accurate the data is in the original V-Folders.
Hasn't the Pro-96
been out for about ten years ? There must have been lots of changes.

Might not have been entirely accurate back then; at least one revision was released.

Thanks Bill,

I have seen LCD’s fade out in real cold WX and then be OK when warmed up. I have also seen LCD displays fade over time,

or go out completely, or have bad segments or black spots.

But this one fades out completely and later returns to full contrast. It has done this 6 or 7 times.

Is that a symptom of the problem in 2006 ?

Thanks,

Jack

Sir,

Back in 2006 this problem appeared in a few models. The problem is the LCD Module is failing. You need to send it in to Radio Shack. The LCD Module can not be repaired because it is under a glued area.

Hope this helps

Bill A. Black
Buford, Ga.

Subject: [PRO-96] Problem: PRO-96 diplay fades out after an hour or so.

The display contrast fades out and finally cant be read. I have tried AC,DC,and different batteries. I reset the contrast (MAN/Func9/up) all the way up until it is all black but it still fades. The backlight works OK.

Ocasionally a fresh charge will bring it back.

I searched the files...Does anyone have any idea of what is wrong?

Thanks,
Jack

Look at it this way: Put that nearly $200 toward a retail of $500 and get a new model that can receive stuff the wonderful-but-antiquated Pro-96 can't receive.

Or if money is tight, get another Pro-96 in like-new condition (they're still out there--some people buy these things then don't ever really use them).

From: newnethboy
Topic: 13495 Message: 14505

First a disclaimer: Where you are and what the agencies you want to monitor
are doing has everything to do with whether the capabilities the Pro-96
doesn't have are relevant to you.

Pro-96 does not do:
LTR systems
Military air
700 MHz trunking

For a table view of all modern scanners' capabilities, go to:
http://www.signalharbor.com/trunking.html
(Does not list 700 MHz.)

14506. Re: Pro-96 Sputtering

Yahoo group: PRO-96 (2008 — 2017)
Date: 2011-09-13 21:40:10 UTC
From: Tommy
Topic: 13495 Message: 14506

Thanks. I am in Northern Ohio and the '96 works well here. Nice attachment.
I would guess as time goes by some of the scrambled comms will be decoded by our off shore friends. Especially if more agencies head that way, and there is demand.

I know not legal..but not legal to speed either and everyone does it.
How many of us listened to analog cell phones even after the cell phone lobby pushed for the law.

Time will tell
Tom

14508. File - Monthly Post

Yahoo group: PRO-96 (2008 — 2017)
Date: 2011-09-18 10:48:44 UTC
From: PRO-96@yahoogroups.com
Topic: 160 Message: 14508

This list is for discussion about anything related to Radio Shack's GRE built PRO-96 Digital capable Scanner. This includes Any and all Software for the PRO-96. You can also place your p96 data files for WIN96 software in the files section.

We are the official recognized List by both GRE America, and Radio Shack, And Starrsoft software For the PRO-96..... Several Members are on this list and Our Sister List.

Thanks for your support

From: jbstella
Topic: 14509 Message: 14509

Have problem any help. Went to turn on scanner and it is locked on 1 frequency and key pad won't respond when any keys are pushed any help on this would be greatly appreciated.

14510. Re: [PRO-96] Key pad not responding

From: newnethboy
Topic: 14509 Message: 14510

Try pushing the Scan hard, holding it down, and/or wiggling it while pushed down. If it eventually works, I'd suspect a dirty keypad. This type of keypad (the type used on most scanners, many phones, etc.) can get dirt and/or oil between the rubber membrane and the circuit board so that there is little or no electrical connection.

I've found that wiping both surfaces with a soft, dry wipe (I've had the best success with Kleenex) does a fair job of restoring function. (I emphasize dry wipe; I killed a phone once by using alcohol.)

Note that this is inside the case, requires disassembly until the membrane and circuit board are separated.

A fair job. Not at all like new, but from 'scarcely works if at all' to 'works most of the time'.

Be sure our keypad isn't locked. (FUNCTION LIGHT Button to lock/unlock)

Is the keypad locked? (FUNC then the light button)

Q: Does that stay locked through a power cycle?

A: I tried it, and no, it doesn't persist. When the scanner starts again, the key lock is off.

(That's a shame. That would have been a really simple answer.)

Have to agree with newnethboy. I had similar problems with a scanner and after carefully separating the case, was able to wipe the back of the key pad and gently wipe the contacts and have had no problems since. In Australia we have what are called cotton buds, little bud of cotton wool on a small stick. But it must be dry.

Sounds like cue tips here in the states. I have been reading your thread, and my first thought was that you had some how locked the keypad.

You'd get along well with Fred Mertz. In one of the Hollywood episodes, Lucy sends him out for Q-Tips, and hours later he returns with billiards cues, saying nobody would sell him just the cue tips.

In US, the generic name is cotton swabs; "Q-Tips" is the leading name brand.

14518. Trouble getting scanner and software to communicate with each other.

Yahoo group: PRO-96 (2008 — 2017)
Date: 2011-10-14 01:19:39 UTC
From: Steve
Topic: 14518 Message: 14518

I am running windows 7 on my macbook air. I have had success in getting my PSR 500s data to upload to win500 . It took a little doing. I had to go to Radio shack of all places. But the clerk there was able to get things going for me. Thomas Billman and I tried to get things going with my Pro96.. I kept getting an error message every time I tried to download the data from the software to my scanner. If you think you can offer assistance, please message me.

This list is for discussion about anything related to Radio Shack's GRE built PRO-96 Digital capable Scanner. This includes Any and all Software for the PRO-96. You can also place your p96 data files for WIN96 software in the files section.

We are the official recognized List by both GRE America, and Radio Shack, And Starrsoft software For the PRO-96..... Several Members are on this list and Our Sister List.

Thanks for your support

14520. Win96

Yahoo group: PRO-96 (2008 — 2017)
Date: 2011-10-20 15:38:28 UTC
From: Steve
Topic: 340 Message: 14520

Greetings all
I have a few questions. I just recently got a macbook air with windows 7 installed. I am a mac guy so I wanted to stick with the mac platform .But wanted to have windows capabilities. Now I do! Not too long after getting the computer I downloaded and installed Win500. This was actually done at the computer store while I watched and waited. They had to install Windows 7 on my laptop anyway. SO I had them download and help me register Win500. I have a GRE PSR 500, Radio shack Pro 164 and Radio shack Pro96.. I want to get Win96 for sure . But I have a few questions. Other than the obvious ability to save my current programming to a file . Are there any other benefits to Win96? As you Pro96 owners know the radio doesn't do UHF military air. And it rounds off certain frequencies. Can these be corrected in Win96? Can I correct the errors in rounding off certain frequencies and reload the radio with the corrected data?

Steve

Topic: 340 Message: 14521

The good news:

Win96 is the only way to do some of the programming possible on the Pro-96, and Win96 and competing software can do things much more easily than from the keypad. These aren't big issues if you're not doing any trunking, but I can't imagine doing trunking without Win96 (or doing trunking on any scanner without the related software).

The bad news (maybe):

Before any scanner-connection software is going to do anything for you, you're going to have to figure out how to connect the scanner to the computer. The cable (for the Pro-96 it's RS #20-047--getting hard to find) has USB on the computer end, which is good, but from the USB port to the software via the Mac hardware, BIOS, and OS may be tricky--or impossible.

I use Parallels for Mac and when I plug in my USB>Serial adapter cable to the Mac's USB port, it asks me whether I want that piece of hardware to work with the Mac or with the Windows. I can then do whatever I need to assign it the right port using standard Windows processes.

I don't know what you are using for Windows, but I hope it is as simple as that for you.

In your case you have to make sure the USB cable is connected to Windows rather then Mac OSX (if you're running Windows on VM Ware or Parallels). You have to have the correct drivers installed in Windows and have the proper COM port set.

My situation was the comport was wrong. I also had to get a little adapter for the cable itself that would go from the radio to the computer. This brings up another question, will the software with this radio work at all with the Mac? Or for that matter, any other radio software how well will they work with the Mac?

On the "Files" link in this forum, download one of the P96 files and import it into WIN96. It's fairly simple to understand it once you've seen it done.

Before you transfer the program start the program, then look for the Help button, then the license key, write that info down exactly. Unless I'm wrong you should be able to enter that info back in after you transfer the program. Don't forget to copy all your saved files you made up for different areas.

License key is available in Pro-96 at least by v01.66. Look in Help>License.

Hint: Be sure to copy and paste this info; if you try to transcribe it manually, you're vulnerable to leaving out or adding a character which will invalidate the entry and you may by then have to go to Plan B (buy a new license).

On your present computer, Start Win96. Go to Help/License Key, highlight the information and copy and paste
in a .txt file on a USB memory stick. On the new laptop after downloading a new copy of Win96, go to Help/Register and paste the information.
Also copy your files from the old Win96 in the same way.

It is definitely not the volume knob as I have done that and also replaced it. The problem has to due with the circuit board itself. If I apply pressure in one particular area I can make the volume work. I have checked over the board with a magnifying glass to look for a loose solder connection or hairline crack and cannot find either.

The control circuit board is in perfect working condition it just appears to be the upper/tuner circuit board that has the problem.

Applies not only to software keys, but to all data on any computer: "Backup early and backup often."

Harddrives crash. Users make mistakes. Computers are stolen. Computers are destroyed.

EVERY computer user needs a backup plan that:

1. Faithfully creates a restorable backup.

2. Is easy and goof-resistant to use.

3. Gets used regularly.

4. Stores the backup off-premises.

I've heard too many "I wish I had"/"I meant to"/"I knew I should have" stories; I clone my harddrive weekly and store it away safely. If I lost my Win96 key in a harddrive crash, I assure you that would be the least of my losses! I wouldn't live long enough to recover a tenth of the data from hardcopy.

I have a Pro-96 that is having volume troubles. Other than that it works

perfectly. If someone would like to buy it from me for parts make me an

offer.

Doesn't appear so. A Registry search for my license finds nothing.

So, no, not in a form you could use it, anyway.

Try downloading the Belarc utility, install and run it and see if the key is listed in the result. Belarc is a great utility that will tell you everything you ever wanted to know about your computer but did not know who to ask!!!

He got so many requests from people who failed to keep up with their registration that he stopped doing that. He did change the program so it can show the registration in the help tab.

Bottom line - write it down and put it where you can find it.

I have a Pro 96 with the exact same problem. It has no signs of cracks or bad solder joints. But if I apply pressure to the case audio comes back. It would be nice to find a fix for this as I am sure we are not the only two Pro 96 owners with this problem.

Seth my serial number is C0439xx is yours in a similar range. I think the Pro 96 came out in different version numbers but I could be wrong, might be the Pro 92 I am mixing up. But if there are different versions of the Pro 96 it would be nice to identify.

I know in the Pro 43 days I was able to buy a use receiver board refurbished from the RS factory fairly cheap. I wonder if they have refurbished Pro 96 boards?

Joe

From: newnethboy
Topic: 14580 Message: 14580

Trying to program the new Pasadena cell of the ICIS system (Los Angeles area). It just doesn't work. Here's my question to this group: Is the Pro-96 capable of receiving/decoding a TRS with the following table settings?

Base = 470.00625
Offset = 380
Step = 6.25

Control channels in the 477 MHz range.

14581. p96 files

14586. Monitoring the New NJSP 700mhz Band

Yahoo group: PRO-96 (2008 — 2017)
Date: 2011-12-28 05:11:20 UTC
From: ejodie322
Topic: 14586 Message: 14586

Hi guys, I know the Pro 96 will not trunk the 700 band , but I'm wondering if I can just monitor a freq. manually and if so how. I'm thinking it should be able to do this. I put in the freq. but I dont get anything, Why ? Do I have to program it in anyway. I have other post stating what they heard, but how did they get it. The GRE PSR 800 is the only radio capable of monitoring and tracking the 700mhz band for now.
Thanks
Ed

I am pretty sure the answer is no. The PSR 500 probably can. I do have one 700mhz system in my PSR 500.

>to enter 700 MHz frequencies.

nice tip although in my area, SF bay area, has no 700 MHz I'm aware of.

about scanning 700 MHz, years ago someone posted a question on rec.scanner newsgroup, "how can I modify my Pro-2006 to receive freq between 512 and 800 MHz?"

A reply, "Buy a portable TV set. The picture is better!" Looking back this may be a sound question though I believe all 700 MHz is digital.

Mike

PS: I still use my Pro2006 for certain stations

14590. Pro-96 power port problem

Yahoo group: PRO-96 (2008 — 2017)
Date: 2011-12-28 22:58:48 UTC
From: Okie
Topic: 14586 Message: 14590

Greetings All,

I am having a strange problem with the power port on my Pro-96. I have a power cable in my car and a power cable on my desk and they both act the same way.

When I plug them into the scanner, the scanner goes on and off/on and off. It appears that there is a loose connection or something. I have taken the scanner apart and examined the power post to see if it is loose or has a cracked solder or something. I cannot see any issue there. It is interesting that it happens with two different cables, so it leads me to believe the problem is on the scanner side.

Anybody have any ideas or experience with this issue?

Thank you in advance.

Okie

I had a similar problem on a previous scanner, and the power ports are constructed the same way.

There are inner and outer contacts on the plug. The inner contacts the center pin of the jack, and the outer contacts a contact on the side of the jack. That latter contact also moves to actuate the switch that changes the power path between battery and A/C.

First, there was misinformation some time back concerning the correct size for the adapter plug. The correct size is the RS Adaptaplug C.

Assuming you have that correct, the most likely suspect, IMO, is an accumulation of dirt in the jack (or perhaps wear). If it's dirt/gunk, application of a good "tuner cleaner" or "contact cleaner" might get it clean enough to work properly again.

Hint: Use a bit of "business paper", folded into a multi-layered strip about 1/8 inch wide to stick into the jack socket to pick up any gunk the cleaner dislodges/dissolves.

Good thought.

Only problem here is that Okie said there's the same problem with both car adapter and house adapter.

It's possible both have gone bad at the same time, but this is not the most likely possibility.

Still, it's the easiest to eliminate (buy one or two new Adaptaplugs).

Hi all
i am hoping to get help going back to the original programs that were in my pro96 when i bought it in 2003--within 6 months i messed around with it and SINCE then i have not had what i had in the beginning--i am in montgomery county, Pa--the v scanners were all in there for Balt--Mary--Del--PA---i don't know where my head was when i bought it except that i missed not hearing the activities in the area i lived in on my little 16 channel bearcat when they all went digital. i don't need or want 500 channels and a gazillion frequencies---all i want is philly and now that i've moved also montco county and maybe bucks (police only) i don't want all the other stuff---the MAIN thing is to be able to pause on an area and leave it there till i decide to listen to another area or let it scan---i CANNOT do any of this since i did whatever. i am not computer savvy so Win 96 won't work for me i am retired and have the time to manually program it--i don't know how to copy and paste etc so please be kind i'm an older woman and need help--this has gone on too long--i am very intimidated by all the scanner groups--especially because i am an older woman. i tried to open a pdf file on yahoo answers but i'm afraid of a "bug"--it said i need "office" or something and i don't have it yada yada yada--SORRY!!!! somebody who lives in east montco county or philly ought to be able to help---R.S. helped me a few times on the phone but that was years ago--now they don't do that anymore--i'm listening to cab cos. etc--not what i want.
i rejoined RR only to get intimidated again and didn't post anything.

thanks
liz

i do hear philly only dispatch but it is all over the place and can't be PAUSED where i want it--yes, i can pause it but it doesn't STAY on that activity it keeps scanning i guess--i want to do what i did the first 6 months STOP on the channel that held my interest and leave it there and continue with THAT activity till I end it---what did i do? this is 9 out of 10 banks--1 bank is new jersey medical only--i don't want it not interested

Erwin,

Try plugging into the PGM jack on the side and unplugging it. It could be that the connector is not recognizing that there is no plug in the jack and thinks that it is in the program mode.

Just a thought,

Scott

Hi everyone, I am thinking about programming in the New York Gas and Electric Utility Trunked system in to my Pro-96, and know that a while back with P-25 systems you needed to enter in frequency tables with the Pro-96. The last time I had it in for repair was about two years ago and from what it looks like the firmware was upgraded.
Do I still need the tables or not and if so what are they?

That works if the system you're programming uses the standard table. Otherwise, you need to program the values. And to program them, you need to know them.

Try looking up NYG&E at RadioReference.com.

Hey all!

I'm helping a friend to fix his Pro-96. His antenna jack is worn to the point that it will not keep the actual antenna in place so we need to replace it.

I called my local Radio Shack and they said they have the part (they can order it), but a question:

I took the scanner apart and see that I will need to remove the upper metal plate to be able to get at the spot where the wire from the jack to the scanner's PC board is soldered in. One side of the plate is anchored to the base with a black, solid, tar-like substance in addition to the solder points.

The latter I can easily remove with the tools I have, but is there any special trick to removing the black tar substance? I don't want to mess up his scanner otherwise :) .

Thanks in advance for any advice!

Jon

Hey Jon.

I don't recall any black tar substance on my 96. I have seen it on other radios though. I just Very Carefully pry it out with a dull Exacto knife or small screwdriver and tweezers.

Replacing this jack is a major pain. Is the ant jack visible worn or broken?

These jacks are notorious for having the center pin open up. The pin is like a little 'fork" which grips the ant pin.

Here is what I have done to fix this problem of a loose antenna /connector.

Before performing inner surgery and if the jack is not visibly worn, I carefully stick a needle into the jack next to the center pin on each side and bend it slightly inward. Occasionally I have stripped the insulation from a 22 ga wire and stuffed the hollow insulation tube next to the center pin to act as an additional spring. I just make sure that I haven't closed the "fork" too far so the ant pin wont fit in.

Also I have placed a thin rubber washer over the ant jack and slide it down to the case. This keeps the ant connected even if the 2 outside jack pins are worn.

Another problem can be that the connection to either the center pin or ground inside the radio has broken from the PC board.

Good Luck, Jack W8JAK

Thanks for the advice!

I guess I should have clarified...the 2 stubs on the outside of the jack are what are worn, and the pin on the inside of the unit that was soldered to the PC board has broken off (from the PC board).

Again, I have no problem desoldering/resoldering things (I do a lot of similar work on "classic" video arcade machines from the early 1980s to repair their monitors and game PCBs, including replacing surface mounted IC chips) and I will need to do so to remove that metal plate to be able to access the pin, and then resolder it to the Pro-96's small internal PC board.

I did get the original jack out without much difficulty using a pliers to unscrew it from the inside...it's that metal plate that covers the pin portion that I need to now remove which might be a bit more of a hassle.

I'll try as you suggest with some small pliers to get that black substance out from the one side of the plate.

Thanks again!

Jon

Hi there,
Hope someone can help me. My brother and I both own the pro-96. He was having trouble receiving radio transmission from a trunked police department. Previously, our radios were working fine. It started happening on my radio also. I can receive the transmission fine then all of a sudden it will go out and I just receive static. Then it comes back like nothing happened. Sometimes it is for a couple of hours and sometimes it is for a whole day. I can still scan through my regular untrunked bank fine, even when this is happening.
Thanks,
Linda

Not sure what you mean but it is Montclair NJ. I am not very good at this so please forgive me. I have someone who manually programs my radio and since I only listen locally, that is really all I need to program.

My radio was working up until about 3 weeks ago. It did not work all day yesterday and this morning it is working fine. I was wondering if it is a signal problem or a radio problem. The non-trunked bank scans fine thru all of this.

There is also a possibility that they narrow banded the frequency which would decrease their signal somewhat. First I would try to change location of the radio or try an external antenna if you do not have one. Since the Pro-96 is potable you could take closer to their transmitter and see if there is any improvement.

Bruce,
I use my radio at the same locations, my bedroom and my office. My brother has his solely in the car. Narrow banding was brought up by the young man who programmed my radio. I will look into a better antenna and see if that changes the problem. So far, since this morning, I am receiving transmission.

Or . . . . . .

You can try going right to the "horse's mouth"-
If the department has a communications officer, call and ask him -
different departments have different monitoring 'policies' -
some resent the public listening to them, while others will give out this information.
If that don't work, try to find out where they have their radios repaired and talk to them.

Thanks John. I listen for 2 reasons. My dad and brother are both retired cops and my nephew is now on. I have listened to a "police radio" ever since I can remember. My dad had one of the first plectron radios. I have always had a radio ever since. Not much of a radio user as I am a radio listener.
My second reason is my brother and I both own towing company's in town and do the police towing.
Funny thing is, my brother (retired cop) set up the 911 system when it came to our town but left before the trunked system started. He lives in Florida and use to listen once in a while on line. Now,he can't pick it up at all.
We are working on having someone at hq help us figure it out. Right now, I have a young man who is a fireman in another town program the pro-96 and never had a problem until about a month ago.
Right now, scanner is working!
Thanks, Linda

Currently, I'm having a problem with reception also. The local trunked system only comes in sometimes and the conventional analog comes in with low signal-to-noise. I'm sure it's an antenna problem, but I haven't yet gotten time to do more than spray some tuner cleaner on it (which helped, btw).

Given your problem as you've described it, this is probably not your problem. However, keep that in mind as you move forward.

Hank, the drivers are on Radio Shacks web site, just type in the part # for your cable and the support software should show up. Com 5 you can select in the software you are using to program the scanner. What version of windows are you running? XP and 7 usually see the cables without any issues.

14648. Pro 96 Freq. input

Yahoo group: PRO-96 (2008 — 2017)
Date: 2012-03-11 15:35:48 UTC
From: spearl733
Topic: 14648 Message: 14648

I have owned scanners for years, but never caught on to programming for trunk and now digital and could use some help.

I have a pro96 and live in the Nashville, TN area. I had radio shack place some freq. into it; but there want allot added. So I manually input freq. into it using win96 with all the frequencies I saw on Radio Reference in to a deferent bank.

I feel I don't get activity for allot of the frequencies I manually put in. So I'm sure I didn't do it correct.

I would like to email my P96 file to anyone that would like to review it for me and suggest and fixes I should make.

Thanks,
Larry

14649. UPDATE: Pro-96 power port problem

Yahoo group: PRO-96 (2008 — 2017)
Date: 2012-03-12 00:29:52 UTC
From: Okie
Topic: 14586 Message: 14649

Update;

I took my Pro-96 to a local Radio Shack and had it sent off to "Radio Shack" to be evaluated and possibly fixed.

I got a call from the National Service Center saying that it would need a new receiver. "Say what?" So I called back and asked to speak to a tech.....can't do that. I had to leave a message with the person that could not understand what I was trying to ask, which was, " why do I need a new receiver when it is a power plug problem?"

After another call later in the afternoon, another admin with slightly more knowledge.....told me that in order to fix the power port they need to replace the receiver which contains the power plug and is one part. The cost of the part is $196.00 and $49.00 in labor. The total was $245.00. Needless to say, I did not have it repaired.

The same day a Pro-96 sold on ebay for $240.00

Good thought.

Only problem here is that Okie said there's the same problem with both car

adapter and house adapter.

It's possible both have gone bad at the same time, but this is not the most

likely possibility.

Still, it's the easiest to eliminate (buy one or two new Adaptaplugs).

Did you try the cleaning fix? A can of the best contact cleaner is about $15 (and will do a whole lot more than this one fix). Spray it into the power jack, then immediately plug and unplug an adapter several times. At this point, what could it hurt, and it just might fix the problem.

Another idea is to find a local radio repair shop. The worst you can do there is talk to someone who DOES know what s/he's talking about, even if the result is that the part will still cost $196.

I like my Pro-96, but I'll never go back to RS ("Ripoff Specialists").

Good thought.

Only problem here is that Okie said there's the same problem with both car

adapter and house adapter.

It's possible both have gone bad at the same time, but this is not the most likely possibility.

Still, it's the easiest to eliminate (buy one or two new Adaptaplugs).

Did you try the cleaning fix? A can of the best contact cleaner is about $15 (and will do a whole lot more than this one fix). Spray it into the power jack, then immediately plug and unplug an adapter several times. At this point, what could it hurt, and it just might fix the problem.

Another idea is to find a local radio repair shop. The worst you can do there is talk to someone who DOES know what s/he's talking about, even if the result is that the part will still cost $196.

I like my Pro-96, but I'll never go back to RS ("Ripoff Specialists").

Subject: [PRO-96] UPDATE: Pro-96 power port problem

Update;

I took my Pro-96 to a local Radio Shack and had it sent off to "Radio Shack" to be evaluated and possibly fixed.

I got a call from the National Service Center saying that it would need a new receiver. "Say what?" So I called back and asked to speak to a tech.....can't do that. I had to leave a message with the person that could not understand what I was trying to ask, which was, " why do I need a new receiver when it is a power plug problem?"

After another call later in the afternoon, another admin with slightly more knowledge.....told me that in order to fix the power port they need to replace the receiver which contains the power plug and is one part. The cost of the part is $196.00 and $49.00 in labor. The total was $245.00. Needless to say, I did not have it repaired.

The same day a Pro-96 sold on ebay for $240.00

This list is for discussion about anything related to Radio Shack's GRE built PRO-96 Digital capable Scanner. This includes Any and all Software for the PRO-96. You can also place your p96 data files for WIN96 software in the files section.

We are the official recognized List by both GRE America, and Radio Shack, And Starrsoft software For the PRO-96..... Several Members are on this list and Our Sister List.

Thanks for your support

If one can, how do you set the Pro-96 to scan ID Only? (P-25)
You can do this in the BC296D (scan ID or search ID). Cannot find anything in the manual.
Any help would be greatly appreciated... Craig

14658. Re: [PRO-96] Scan ID Only

I think you might mean, Open or Closed.
It's Function + 5 to toggle back and forth between this option.

Found it. Page 90 of the manual:

"
Changing from ID Text Tag Display to ID Code Display

By default, your scanner displays the stored alphanumeric text tag when receiving a trunked voice call. You can toggle the display to show the text tag or the talkgroup ID code by pressing TEXT while the scanner is stopped on a trunked talkgroup call.

14660. What to replace Pro-96?

Yahoo group: PRO-96 (2008 — 2017)
Date: 2012-03-19 22:14:07 UTC
From: Sean O'Brien
Topic: 14656 Message: 14660

G'day all!

After 7 years of sterling service my Pro96 has suffered an electric shock and she no work no more.

Being in Oz and having purchased in the US I am not confident of finding a suitable repair facility that will cost less than a new item. (suggestions to the contrary accepted).

I still have the ability to source from the US. Have noted Radio Shack currently have various scanners on sale eg Pro 106/164 plus Uniden 396.

Looking for suggestions.

Thanks in anticipation,

OB

It's getting more and more difficult to justify spending money to repair a PRO-96; I'd agree with your assessment.

I'd look at the GRE PSR-500 and the Uniden BCD-396XT in handhelds, or their equivalent desk models. There really is nothing on the market other than these two which will work for most every modern radio system.

You might see if you can get the product you finally choose from ScannerMaster
http://www.scannermaster.com/

IMO, being in Oz, you're almost a safe distance from RadioShack.

Go with the PSR-800. It is more sensitive than the 96 and works great. The only issue is the bandplan there, you will have to program it all manually I think. With the software that comes with, not hard to do.

Look for OPEN and CLOSED banks. OPEN = ID SEARCH and CLOSED = ID SCAN.

You change the bank setting using FUNC 5 when on that bank. An open bank
will have a + sign and a closed one will show a -.

Ed, I didn't receive anything. You may try sending it again. I attached my file if you want to look at what I have. I will give a summary of
what I have done and what I was trying to accomplish with my Pro96.I took the radio to Radio Shack and they add one bank of
frequencies.

So I wanted to break things in to different bank to turn some
on/off; plus I wanted to add a lot more frequencies and talk groups that I
found on RadioReference.com that I didn?t have on my Pro96.

Using Win96 I moved the Radio Shack stuff to bank 9. I use
the same frequencies plus some to begin new banks and started added the talk
group and made banks as follow.

Bank 0 ? My local stuff, 1 ? Police, 2 ? fire, 3 ? THP,
etc.?.

I didn?t do any changing to any mapping stuff.

With what I have done; it don?t seem like I get the same
activity on my stuff as on RS stuff on bank 9 and figured I did something
wrong. Because I added tons more talk groups.

Thanks so much for your time and help. I am trying to lean
and get a grasp on this.

The EASIET way to program the 96 or a 2096 is to buy WIN96 ($30.). Subscribe to Radio reference for 6 months, costs $15. Then you can use the WIN96 to go into the radio reference database aand say you want CT State Police, you click on the digital download and it automatically downloads to win96 all the frequencies and talk groups then when you have all the frequencies you want for your area you simply upload to your scanner. In my case I then clone the scanner to my 2 2096's. The entire process can take less than an hour to do everything, Gil

This list is for discussion about anything related to Radio Shack's GRE built PRO-96 Digital capable Scanner. This includes Any and all Software for the PRO-96. You can also place your p96 data files for WIN96 software in the files section.

We are the official recognized List by both GRE America, and Radio Shack, And Starrsoft software For the PRO-96..... Several Members are on this list and Our Sister List.

Thanks for your support

14676. Pro 96 programming cable

Yahoo group: PRO-96 (2008 — 2017)
Date: 2012-04-02 23:23:26 UTC
From: marjarrit1
Topic: 14076 Message: 14676

Good Afternoon,

I am looking for a programming cable for my pro 96.

Any suggestions.

Thanks,

Marc

I believe I lost some of the pre-programmed frequencies which were in my scanner. Is there anyway of obtaining the rs pre-programmed frequencies to download to my computer or is there a way to recover them from my pro-96 alone.

THanks,

If you're using Win96, the V-Scanner setups are in .p96 files in this group's files.

http://groups.yahoo.com/group/PRO-96/files/VF-2096.zip

Alternatively, the V-Scanner setups are also there in Excel and text format.

Thanks for the info.

How to I download from the Win96 file to the scanner?

Thanks,

Marc

You need to purchase WIN96 from Starrsoft then import the P96 frequency files into your scanner using the program. You'll also need the USB comm cable from Radio Shack 20-047. Not sure if they sell it anymore. May need to look on ebay...

You can go to the Radio Shack website and download the factory preset virtual scanner file, and install them in your PRO-96, as long as you have the scanner programming cable and the WIN-95 software from Starrsoft. The software is a free trial, but it is worht the $ to buty it since you own the PRO-96 - it's the easiest and fastest way to program the PRO-96.

The cable you need is available at Radio Shack - for Windows XP and older machines, it's the 20-047 programming cable. For Windows 7 machines, R/S has a newer cable to purchase (sorry, I don't know the catalog # as I still have XP (by choice))

Win95 can install frequencies found on RadioReference.com, so it's a very versatile software.

Hello Tom

I've been using Radioreference for about 5 years now and have not found any site with better or more accurate information then them.

That said, I also belong to a local news group that helps out with little local questions. I've used the RR database for Florida, Georgia, North & South Carolina, New Jersey, Tennessee, Texas, Pennsylvania and Arizona and ALWAYS got everything I needed either from the database or the related state newsgroup. Go to your states newsgroup and ask this question there. IF there is anything else I'd bet they will tell you.

14697. PRO-96 on the State of Wisconsin WISCOM System

Yahoo group: PRO-96 (2008 — 2017)
Date: 2012-05-05 14:17:58 UTC
From: n9upc
Topic: 14697 Message: 14697

Has anyone programmed a Pro-96 on the State of Wisconsin WISCOM System? If so can you tell me how you did it?

It is a VHF P25 trunked system with freqs. ranging from 138 MHz - 162 MHz. It is a SmartZone Omni-link system and the towers I am trying to listen to is NOT a simul-cast site.

The issue I am running into deals with trying to set it up for control channel trunking in an open bank mode to monitor the different talkgroups coming across the tower as this is a new system.

I did use this same scanner to monitor the MN ARMER (800MHz P25 trunking) System and it worked fine while monitoring this system with control channel trunking but I am having issues with the VHF system.

They use four sets of VHF tables and I am wondering if that is an issue as I do not have a programming cable and can only enter one set of VHF offset which I have set-up for the control channel in the 139MHz range.

I also did notice that the system ID does not show up when I am monitoring the control channel. But I do get a % reading on that tower showing about 60-80%.

Can anyone help me program the parameters for VHF P25 trunking in this scanner? Will I need software and a cable??? Many thanks in advance.

In my opinion, software works great, I live in Grant county and wiscom has not come online yet down here not sure when my sources tell me that our talkgroups havent even come online yet in this county. As far as software goes, I'd much wrather program my pro106 with the software by far over hand, I monitor Starcom21 and edacs alot down here and they take forever to program by hand

could be a bad power jack, could be batteries, could be the battery
connections - check to see that the connectors are all free of debris.

What I've experienced in the past is the switch in the power jack getting iffy.

The anatomy of a power jack: There's a center post, which is one of the contacts. There is an outer barrel, which is the other contact. There is a spring-loaded switch/tensioner, which is displaced by the plug and which pushes the plug into firm contact with the center pin and the barrel (I believe this switch/tensioner could also be the contact in some cases).

The switch also signals the circuitry that A/C power is applied so that the circuitry can make the changes necessary to stop running on battery power and to charge the batteries.

Therefore, if that switch gets gunked up (pardon the technical term) or stops making good contact or break of contact, the scanner might not be able to charge batteries, might not run from A/C, or both.

Sometimes, spraying tuner cleaner in the jack and plugging/unplugging a power supply repeatedly for several seconds can clean whatever is wrong.

What I've experienced in the past is the switch in the power jack getting iffy.

The anatomy of a power jack: There's a center post, which is one of the contacts. There is an outer barrel, which is the other contact. There is a spring-loaded switch/tensioner, which is displaced by the plug and which pushes the plug into firm contact with the center pin and the barrel (I believe this switch/tensioner could also be the contact in some cases).

The switch also signals the circuitry that A/C power is applied so that the circuitry can make the changes necessary to stop running on battery power and to charge the batteries.

Therefore, if that switch gets gunked up (pardon the technical term) or stops making good contact or break of contact, the scanner might not be able to charge batteries, might not run from A/C, or both.

Sometimes, spraying tuner cleaner in the jack and plugging/unplugging a power supply repeatedly for several seconds can clean whatever is wrong.

This list is for discussion about anything related to Radio Shack's GRE built PRO-96 Digital capable Scanner. This includes Any and all Software for the PRO-96. You can also place your p96 data files for WIN96 software in the files section.

We are the official recognized List by both GRE America, and Radio Shack, And Starrsoft software For the PRO-96..... Several Members are on this list and Our Sister List.

Thanks for your support

Group Contact, subscribe & unsubscribe info:

14712. Digital board

Yahoo group: PRO-96 (2008 — 2017)
Date: 2012-05-30 21:18:43 UTC
From: radionutmike
Topic: 14712 Message: 14712

The digital board in my Pro-96 went out, the rest of the scanner works fine (fm and am) but just will not decode digital. I sent it in to RS for repair and they replaced the board but issue was not fixed. I returned it and they removed the replaced board and sent the 96 back to me. It scans, works fine on am and fm, is in great physical condition but just will not decode any digital.

I was wondering if anyone had a pro-96 that may work electonicly but that may be damaged (case, display bad or what ever) that they would be looking to get rid of?

Maybe I could combine the two to come up with something working

I'm afraid the Pro-96 has reached a point where massive repairs are not good value.

There is much happening in radio (though not in all areas, so this applies only in theory for some of us) that the Pro-96 can't handle, e.g. 700MHz trunking, full P-25.

Your idea of combining might work out if not expensive.

Very interesting point.

I was at a hamfest last weekend and was disappointed to discover that
the starting point for digital scanners was about $400.

I thing that newnethboy meant that the PRO 96 doesn't seem to be able
handle full P-25 trunked system.
Non-trunked P-25 system are OK.

I am in Burbank CA and we are under the ICIS system, which is all Motorolla II p25 trunked digital system. Using it with multiple sites with Burbank Police on Oat Mt. Site and Verdugo Fire using Oat Mt. And Glendale Site.

Everything works well, though I enjoy the Uniden programming and control read out while it scans much better. (I have both brands) the problem I had with the Pro-96 was in programming. With P25 it's very tricky... You may think you have everything right but 1 number may be off. The hi and low settings are what messed up my Verdugo Fire programming.

So if anybody ever needs any help in the Verdugo Fire area let me know.

Also another note. When original posted sent in to repair, possibly did they change the programming at all? I have heard of Radio Shack messing these things up. And did your areas digital users possibly decide to go encrypted? If so you'll never hear them. Pasadena, ca pd did this (news media hates them now for it.)

Digital-trunking scanners have all retailed for $500 and have been available most of the time for around $400 since they first came out. Maybe they'll drift downward someday, but they haven't yet.

I got my Uniden for around $350 on Craigslist. So you can find them out there. Just have to keep looking.

Maybe one day they will be as accessible.

The new Pasadena site is a very closed system from what I've heard. I know PD is encrypting EVERYTHING. All the news media are really upset about it (thankfully i don't live in Pasadena or work there or I'd be upset)

I will have to experiment between the two and see for myself, though I really don't have any reason to listen to the Pasadena site.

I feel that this will become more common as Electronic Techs retire that can and are willing to do component level repairs. The new techs (note I didn't refer to them as Electronic Techs) know how to swap boards and that is about all. Besides more money in boards than in components.

Did you try the cleaning fix? A can of the best contact cleaner is about $15 (and will do a whole lot more than this one fix). Spray it into the power jack, then immediately plug and unplug an adapter several times. At this point, what could it hurt, and it just might fix the problem.

Another idea is to find a local radio repair shop. The worst you can do there is talk to someone who DOES know what s/he's talking about, even if the result is that the part will still cost $196.

I like my Pro-96, but I'll never go back to RS ("Ripoff Specialists").

Subject: [PRO-96] UPDATE: Pro-96 power port problem

Update;

I took my Pro-96 to a local Radio Shack and had it sent off to "Radio Shack" to be evaluated and possibly fixed.

I got a call from the National Service Center saying that it would need a new receiver. "Say what?" So I called back and asked to speak to a tech.....can't do that. I had to leave a message with the person that could not understand what I was trying to ask, which was, " why do I need a

new receiver when it is a power plug problem?"

After another call later in the afternoon, another admin with slightly more knowledge.....told me that in order to fix the power port they need to replace the receiver which contains the power plug and is one part. The cost of the part is $196.00 and $49.00 in labor. The total was $245.00. Needless to say, I did not have it repaired.

The same day a Pro-96 sold on ebay for $240.00

Good thought.

Only problem here is that Okie said there's the same problem with both car

adapter and house adapter.

It's possible both have gone bad at the same time, but this is not the most

likely possibility.

Still, it's the easiest to eliminate (buy one or two new Adaptaplugs).

14729. Loudoun County, Va. Sheriff Frequencies

Yahoo group: PRO-96 (2008 — 2017)
Date: 2012-06-02 13:31:58 UTC
From: marjarrit1
Topic: 14729 Message: 14729

Is it possible to add Loudoun County Sheriffs frequencies? or has Loudoun County changed the frequencies which are unable to be used with the Pro 96. The only frequencies I can get by downloading win 96 are the following which are fire frequencies.

Loudoun TRS 868.77500 MOT 0.0 D
Loudoun TRS 868.66250 MOT 0.0 D
Loudoun TRS 868.05000 MOT 0.0 D
LCFR 1 46.38000 CT 0.0 D

Thanks,

Marc

Subject: [PRO-96] Scanner got hot. Won't stay turned on now.

I have a pro96 it melted the yellow battery pack but I was using the Cig
lighter
addapter and it quit working. I replaced the diode that burned up and the
unit
will turn on. I can see the Boot up display then the start up screen and
then
the lights go off and shuts off. the board also smells hot.

is there a place I can send this off to get repaired? or is the unit shot?
Thanks for any info.

From: weatherspotting
Topic: 14738 Message: 14738

Hello, I have 2 of the PRO-96 scanners has anyone used them with the VHF narrow band frequencies? Is there a firmware update for narrow band?

Or is it time to buy new scanners?
Thanks for your help.

AFAIK, for narrow-banded conventional, you just keep settings as they are.
Not positive about programming the "in-between" frequencies which
theoretically are coming.

I had a similar problem with my PRO-96 - so I went on eBay and bought a "non-working" scanner (the one I bought had some e=damage to the case which caused it not to work - took the guts out of it and put it in muy good case, repaired a broken connection, and now have a great working scanner, plus I put the other one back together, and resold it on ebay as a parts scanner - so I would check on eBay or other online auction sites.

Hi group,
I was just wondering if anyone has run into this error.
I have a RS Pro-96 and I can download programing from the scanner but when I upload to the scanner, I get "Incorrect Model while in Clone Mode", I am using the Grey Cable GE02D 8360 with a win 7 pc.
I have searched and searched, what I did find was something about a USB driver but.....
So I'm lost.

What software are you using? Are you using the mono to stereo adapter? The 96 needs to see a mono cable I believe (but am not absolutely sure).

The RS 20-247 cable does NOT use the adapter; the three-conductor plug fits the Pro-96.

I don't know what the "Grey Cable GE02D 8360", or whether it's correct for the Pro-96.

Win96 with the 20-247 requires a "serial driver" which makes this USB cable "look like" a serial cable, and the port setting has to match what Win96 is looking for.

If using Win96, I found that following the directions on the Starrsoft Website *exactly* makes setup easy, but that any deviation is very likely to completely screw up everything.

I am using Win96. The plug appears to be the mono (1 black band) at the button on the bottom.

I read somewhere that someone was using this same cable as me and it worked for them. My luck I guess.
My daughter just bought me a usb compatible cable, I just hope she didn't waste her money.

Well Took Scanner into Radio Shack. 20 dollars to ship the scanner in.
called me 330.00 dollars to fix it. I said forget it.
then they took my Battery pack with my batterys and said it was defective and refused to
get me a new battery pack. Guess customer service has really gone down hill.

The people in the local store will almost certainly be no help at all. RS
store personnel would have to go through an intensive training program to
get up to totally clueless.

There is an easy way to get your scanner parts back. Let me explain. When I worked for AT&T I was an escalation manager. What I did is when someone got a “no” response, I took over. First thing I did was ask to speak to the supervisor. The Supervisors are like the call takers, useless. I told them I expected to hear back about when something would be done within 4 hours – MAX. If I got satisfaction, good, but if not, I would ask to talk to their manager. Most of the time they would try to say there wasn’t one there and I would tell them that I have their name and would have no problem calling corporate. They would connect me to the Manager. I would explain my issue with them and told them I would expect an answer or solution within 2 hours. SMART managers would jump all over the supervisor asking them “why is this guy bothering me?” and it got resolved. Dumb managers wouldn’t get anything done. After 2 hours and no resolution, I would ask for the name of their District Manager, again if they tried to BS me, I would tell them I would gladly call corporate. Usually, this is as far as you have to go because the higher up you are, you are going to kick some serious butt on someone below you who isn’t doing their job. I actually called a VP while he was at a cocktail party to get a problem fixed. I could hear him on another phone giving someone a royal butt chewing because HE was being bothered!

Now, you have to remember a couple things. NEVER EVER raise you voice. Be the most polite person you can be (take some Prozac before you call) and make sure you are documenting everything. Names, times, promises, numbers, etc. Cross those T’s and dot those I’s. Stick to a strict time table. 1st Escalation is in 4 hours. All others are at a 2 hour interval. Here is a great line to remember: “What can you do to help me with this problem?” You have just put your problem in their lap to get it fixed! If you have done everything right, been exceptionally polite, you will get resolution. But, screw up with your escalations just once, and you can kiss everything goodbye.

Remember the old saying: “You catch more flies with honey than you do with vinegar!”

From my experience, it does not appear that RadioShack works this way. First, it's hard to even find out if the company has a corporate. Second, they stonewall at every level. I went to three different stores, called customer service, emailed everybody I could find an address for (couldn't find any phone numbers, although seems they must exist). Got no responses whatsoever, not even form letters.

And mine was a simple, simple problem that should have been handled by the first person at the first store.

> There is an easy way to get your scanner parts back. Let me explain. When I worked for AT&T I was an escalation manager. What I did is when someone got a “no” response, I took over. First thing I did was ask to speak to the supervisor. The Supervisors are like the call takers, useless. I told them I expected to hear back about when something would be done within 4 hours – MAX. If I got satisfaction, good, but if not, I would ask to talk to their manager. Most of the time they would try to say there wasn’t one there and I would tell them that I have their name and would have no problem calling corporate. They would connect me to the Manager. I would explain my issue with them and told them I would expect an answer or solution within 2 hours. SMART managers would jump all over the supervisor asking them “why is this guy bothering me?” and it got resolved. Dumb managers wouldn’t get anything done. After 2 hours and no resolution, I would ask for the name of their District Manager, again if they tried to BS me, I would tell them I would gladly call corporate. Usually, this is as far as you have to go because the higher up you are, you are going to kick some serious butt on someone below you who isn’t doing their job. I actually called a VP while he was at a cocktail party to get a problem fixed. I could hear him on another phone giving someone a royal butt chewing because HE was being bothered!
>
> Now, you have to remember a couple things. NEVER EVER raise you voice. Be the most polite person you can be (take some Prozac before you call) and make sure you are documenting everything. Names, times, promises, numbers, etc. Cross those T’s and dot those I’s. Stick to a strict time table. 1st

Escalation is in 4 hours. All others are at a 2 hour interval. Here is a great line to remember: “What can you do to help me with this problem?” You have just put your problem in their lap to get it fixed! If you have done everything right, been exceptionally polite, you will get resolution. But, screw up with your escalations just once, and you can kiss everything goodbye.

I believe you said the plastic melted. If that's true, I'd have to side with their "It's a safety hazard" stance (and if you knew how much it pains me to suggest that RS might be right about anything!).

Go to the Scanner Master Website and order a new battery holder (if the scanner is worth the bother).

Either this Webpage is not specific enough or a lot of shippers ignore it; I've received two items with batteries included within the couple of months, both sent by online stores.

I suspect the restrictions apply to such as unsealed lead-acid (e.g. car batteries).

(I've received both Uninterruptible Power Supplies and batteries for same--I think by UPS, though; don't remember--on several occasions, and these are sealed lead-acid. Batteries must be disconnected, though.)

Although I know it is too late for you, when sending in an item for repair, you are supposed to remove anything that is not an integral part of the unit (in the case of a scanner, this means any carry case, antenna, battery pack - I would even remove & kkeep the battery pack cover. Under normal circumstances batteries are not supposed to be shipped, as they are classified as a hazardous material and therefore require special shipping requirements.

Although they may not be able to return your batteries, they should be able to return the battery holder(s) without any issue - just keep after them until they do. Worst case, a new one is only about $15 - 20, including S&H.

I am actually suprized that the store you took the unit to didn't have you pull the batteries, etc. They are supposed to.

Anyway, good luck getting your items back - Usually Radio Shack service doesn't have these types of problems - I have always had good luck with them.

Dave

14765. Hi guys new here, pwr issue pro-96

Yahoo group: PRO-96 (2008 — 2017)
Date: 2012-07-23 21:24:40 UTC
From: styxer08
Topic: 14765 Message: 14765

I got a scanner from a friend that has unknown history. I do know that it has the yellow batt holder and when I placed recharg batt. or run on a adapter 9v it would not turn on. I hit the reset button and nothing. I learnt alooong time ago about ac/dc burn up on an old chrystal scanner in the 80's. if someone placed the wrong charger/adapter on this digital unit. is it toast or repairable by in electronics repair shop. is there something that blows besides major components. with my really old unit, it was easily fixed for cheap.
thanks,
Jim

Duke Energy has reportedly been transitioning its sites in the Carolinas to Open Sky, which cannot be monitored by any current scanner.

Hi,

Our Dispatch recently switched to an anolog, dual, Repeater system. The Tx frequency is 151.4300. The two Repeaters are BARR Rx frequency of 156.1050 and WLMS Rx frequency of 154.6575.

I have programmed all three into my PRO-96 and can not seem to receive as well as my voice pager.

Any suggestions?

Regards,
Tony

Topic: 14793 Message: 14793

Ok Folks,

Here we go I really need some help now,

Been working on this awhile and still haven't got it.

I live in Phoenix, here is what I have, it's a csv file.

Can someone please help me.

Thank you

Lloyd

If you can't get it going with bungee cords and electrician's tape, it's serious.

If you sent a file as an attachment, it was stripped off by YG. See if you can post the file to the Files section of this group (I've never tried, so I don't know if this group allows a user to post a file.)

From: mchenryproj
Topic: 14312 Message: 14795

I know this is really old now but, my guess is that you are sensing that the radio is operating in the "Open" trunking mode. I have this issue with ScanCat and I never have found a button in that software to toggle the "Closed" operation. In Open mode, any talkgroups in the control channel for the trunking system you entered will pass. In Closed mode only the talkgroups you selected are passed to audio. You can easily toggle the systems to Closed mode by hitting "Function" "5" when the scanner is parked on any freq in the trunking system you are having the issue with. Took a while to find that in the manual.

I am looking at ARC96 as an option to ScanCat. I like the entry and the general look of ScanCat but that missing button has made it tough to get it right. Anyway, I hope this helps some others figure the issue out. I'm sure you figured it out by now. You can use ScanCat but you'll have to manually toggle the Closed mode like I did - unless I am missing the button in ScanCat Lite?

This list is for discussion about anything related to Radio Shack's GRE built PRO-96 Digital capable Scanner. This includes Any and all Software for the PRO-96. You can also place your p96 data files for WIN96 software in the files section.

We are the official recognized List by both GRE America, and Radio Shack, And Starrsoft software For the PRO-96..... Several Members are on this list and Our Sister List.

Thanks for your support

From: mchenryproj
Topic: 14797 Message: 14797

Looking for Department of Homeland (in)Security, FEMA, Protective Services, etc for Ohio. Missing from most lists are also US Marshals, FBI, CIA, NSA, etc. Anyone have any current freqs for any of these folks or know where they all went? I know they are using VHF/UHF/800 in some areas as you can see the radios in some videos.

If they are not capable of intercept, can someone tell me why? Everything is intercept capable at some point. If it's broadcast, someone knows where it is.

As proof of some freqs, there are many listed in this PDF. I'll program them all in if I have to but that's a lot of wasted typing I think... (link below)

Most all federal agencies are going to operate primarily in the 162-174 or 406-420 MHz bands. Some will also have access to state operated trunking systems for interoperatibily with local and state agencies.

Looking for accurate lists for specific area is tough. The only real way to tell what it active in your area of interest is to search. You can set up a custom search table in the PRO-96. When searching the federal VHF band or 162-174 MHz, be aware that the PRO-96 searches in 5 Khz steps and the federal channels are at 12.5 Khz steps. You will still be able to receive federal channels just fine, but some of the frequencies displayed on your radio will be slightly off. such as 165.2375 will show as 165.235 or 165.240. This was done in the original firmware of the radio and can't be changed. The UHF band will search in 12.5 Khz steps just fine.

> If they are not capable of intercept, can someone tell me why? Everything is intercept capable at some point. If it's broadcast, someone knows where it is.

It's certainly possible to intercept federal agency communications, but to actually hear what they are saying is another matter. As more and more federal agencies transition to digital radio systems, they have been utilizing encryption more and more. Agencies such as the FBI have been encrypting their channels since the 1980's, although you can find active frequencies for them all over.

> As proof of some freqs, there are many listed in this PDF. I'll program them all in if I have to but that's a lot of wasted typing I think... (link below)
>
> http://www.dhs.gov/xlibrary/assets/nifog-v1-4-rotated-for-viewing.pdf

The frequencies in the NIFOG are good to have around, but for day-to-day federal operations, they won't be used much. These frequencies were set aside for local, state and federal interoperability in the event of a major catastrophe or disaster.

Look around my blog and you will get an idea of what agencies are where in the federal bands. And as I mentioned, finding the frequencies is only the first challenge...

Good luck!

We had a simulated radiological "event" here last week and the most traffic a few of us heard that day were on Columbus Police trunk with id 10144, the EPA. Today I finally realized the reason I wasn't hearing anything directly on any of the published DHS (et al) freqs was because the scanner was looking for PL tones. I turned that off using the ARC-96 demo version and today I am hearing several keyups, voices and repeater IDs on the published DHS freqs from their Interoperability freq listing. Some of those may be from other agencies and not directly DHS, etc but there is some activity out there. As I get familiar with the active freqs I'll post them here if and when possible.

Thanks.

Subject: [PRO-96] schematic

is the schematic available for the Pro-96 anymore?
Have an issue with one not decoding digital audio.
Tried the alignment but still no digital audio with 99% signal
Thanks

14822. Cable for pro96

This list is for discussion about anything related to Radio Shack's GRE built PRO-96 Digital capable Scanner. This includes Any and all Software for the PRO-96. You can also place your p96 data files for WIN96 software in the files section.

We are the official recognized List by both GRE America, and Radio Shack, And Starrsoft software For the PRO-96..... Several Members are on this list and Our Sister List.

Thanks for your support

Group Contact, subscribe & unsubscribe info:

Post message: PRO-96@yahoogroups.com

14824. pro-96 repair

Yahoo group: PRO-96 (2008 — 2017)
Date: 2012-10-14 12:48:38 UTC
From: Jim Gahagan
Topic: 14824 Message: 14824

I know they are older units, and parts are hard to find. but is there a way to get one repaired without costing as much?
I have one that will not turn on. had a friend check it out. he said he couldn't fix it. should I give up and sell for parts?
thanks
Jim.

One problem with RS is they are not standing behind on repair of their radios. I sent a 2096 to their repair depot, it was ONLY 2 years old and it was returned to me as unrepairable, lack of parts. I will never buy a scanner from RS again. I called GRE who made the radio and while they could repair the radio their agreement with RS will NOT permit them to repair a RS product even if made by GRE, I own 2 96's and 2 2096's so not really happy with RS! Gil

do you know if parts in both are able to swap? like the two boards. and even tho they would not repair it for you, was GRE willing to sell the parts needed? I have a tech that tried to find the issue with mine and he wanted to give up due to board traces . I got mine for free and trying to get it to work.

From: newnethboy
Topic: 14824 Message: 14829

IF you can find a good, working PRO-96, and your budget is tight, that's a better plan (IMO) than trying to repair. That is, unless you can find a local, dependable shop that can/will work on it for you.

However, as was said, the PRO-96/2096 is an "old" unit. I think if money must be laid out, it would be better spent on a newer model radio. I don't want to get into a "who hates RS more" battle with Gil, but I will never do business with them again, and thus any RS model is strictly off the table.

I'm hearing good things about the GRE PSR-500, but a lot of people really like the Uniden BCD396XT. (Both references meant to imply inclusion of the matching desktop unit.)

From: Jim Gahagan
Topic: 14824 Message: 14833

it was given to me free DOA, in the hopes to have it repaired and thus have a digital scanner on the cheap. I have a RS pro analog scanner, but our area is using digital and cannot get the police. I was hoping for parts to be available, or able to get a parts scanner and swap the cards out, (seems to be a power issue) something burnt it up. plus not much out there saying about cross-ref parts for the 2096 and the 96. gonna have to wait it out or start saving for a GRE I suppose.
I dont want to invest 250-300 for older/used items when I could save for newer. thanks for the offers tho ;)

I would agree with this analogy too, much better than to invest in the newer technology, the 500 or the 396 are both great units. If you want to read reviews on both units you can go to eham.com and look under scanners, there is a wealth of information at this site, good luck, Gil

Subject: Re: [PRO-96] pro-96 repair

IF you can find a good, working PRO-96, and your budget is tight, that's a
better plan (IMO) than trying to repair. That is, unless you can find a
local, dependable shop that can/will work on it for you.

However, as was said, the PRO-96/2096 is an "old" unit. I think if money
must be laid out, it would be better spent on a newer model radio. I don't
want to get into a "who hates RS more" battle with Gil, but I will never do
business with them again, and thus any RS model is strictly off the table.

I'm hearing good things about the GRE PSR-500, but a lot of people really
like the Uniden BCD396XT. (Both references meant to imply inclusion of the
matching desktop unit.)

From: FIREKILL
Topic: 14839 Message: 14839

i have an nc viper system question for anyone who can help. i recently moved from the area were the viper system ID IS 6038 IN ORANGE county nc. i moved to alamance county and now pick up site id C123 . I AM NOT PICKING UP trunk id's from orange county. esp fire and ops channels. but others come in just fine. anyone got any ideas why i am not picking them uo like i used to. i am using a pro96 scanner.

when i go back inrange of site id 6038 works perfect.

From: newnethboy
Topic: 14841 Message: 14843

When you plug the cable into the scanner, the display should show programming mode.

Once you click Scanner>Upload to scanner, you should have:

1. The display on the scanner showing that it's receiving data.
2. Win96 showing a progress ribbon.
3. The lights blinking on the cable.

I don't know how the above can all happen and the data is not being transferred. If one of the above is missing, you'll know better where to look for the problem.

Don't forget to unplug the cable from the scanner without turning the scanner off, and wait for it to reboot, or the new settings won't "take".

> How can I find COM 5 on my computer?

To answer your question indirectly, I wrote and uploaded to Files section, "Establishing a serial port or COM port on PCs for USB-to-serial adapters" paper. There was a time when I had to deal with havoc of trying to get COM port settings or RSS, printers, TNCs, whatever. Then someone showed me how to work with Device Manager. Paper uploaded has these steps including what windows to look at.

Steps in brief:

1. Open Control Panel, go to "Start" and select "Control Panel"
2. Double click "System" in the Control Panel.
3. In System Properties, click "Hardware" tab.
4. Then click "Device Manager" button.
5. "Device Manager" shows PC hardware, click the "+" for "Ports (COM & LPT)
6. Right click "(COM1) Properties" (your COM may have different title)
7. Click the "Port Settings" tab, this shows baud rates and bits for that COM port.
8. Click "Advanced..." button, below will have COM Port Number.
9. Pull down or scroll to which "COM Port Number" to set appropriate COM # (some may be in use).
10. When done, click the "OK" or "Apply" button on each window which will close it.

From: mtcsmith
Topic: 14855 Message: 14855

I may have posted this before but my Pro-96 reception is horrible. I believe everything is programmed correctly. I go to RadioReference and listen to their audio and it is so clear while my audio is garbled at times and hard to understand. I looked at the control channel list in RadioReference and it doesn't look correct. I have some different frequencies from a couple of years ago when things were re-banded. I don't see those re-banded frequencies there. Also, do I need to enter the voice channels or only the few control channel, whateveer the correct ones are. Do I need a better antenna other than my rubber 800 mhz? I don't have the latest firmware and I know radio Shack no longer supports any updates. Maybe the Pro-96 is and always has been crap. Or, maybe it is the operator. HELP!

Suggest you join the MONIX yahoo group. Specializes in southwestern Ohio but has share files for other areas of the country.

What kind of cable do you need? I still have a programming cable with a 9 pin serial plug on one end for doing the 96. Still sealed in the Radio Shack package. Would have to go looking for it. Don't know where exactly it is right now.

Not sure exactly what the latest version is, but it's a moot point since you cannot upgrade the firmware in the PRO-96. You can only update the DSP which should be available on the Radio Shack website.

14866. PRO-96 no longer able to pick up MPSCS?

Yahoo group: PRO-96 (2008 — 2017)
Date: 2012-12-22 16:45:39 UTC
From: grtdarkwolf
Topic: 14866 Message: 14866

Hi, Sorry to just pop in as a new member without an intro. I suddenly can't hear any MPSCS APCO 25 programming in Michigan. It started about 3 days ago when Lapeer and Flint went digital. Everything was programmed in properly but now Radio Shack says that this scanner is no longer going to work. They are saying that digital trunking won't work and a new actual digital is needed. They tell me there is nothing that can be done with the pro-96 to make it work. Anyone out there besides a Radio Shack sales person know for sure? Thanks.

Strange, did they say why it's not going to work? The state system of Michigan has an upgraded phase 2 at all. When I was home in June my pro 96 did just fine. Also, with the feed on radio reference.com there are plenty of feeds that are using MPSC yes.

What frequencies did they reband to? Everything continued to work down here in SW Ohio. Suggest you join the MONIX Yahoo group here and repost your same question. http://groups.yahoo.com/group/MONIX/ Be sure your MONIX page is the one with the antennas on an orange background and then sign up. Some of the guru's who specialize in programming the 96 will be able to answer your question for sure. I don't have enough experience with the 96 but think it has to have the new control freq, step, and other info that is not in the conventionally expected specs stored in the radio as alternate config data for the new system.

Right now, as I understand it the state system in Michigan is going to use old pre-read banded frequencies and then the new ones until everything has been re-banded.

In programming the Pro-96 Trunking Tables, you need to enter five values:
CH Lo
CH Hi
Base Freq
Offset
Step

For such quasi-P-25 (for lack of a more accurate term) systems as all but the latest ICIS setups in SoCal, an offset was used, say of 380, which meant that the voice channel numbering would start at 380 (first/lowest voice channel was known as 380).

From what I understand, pure P-25 (again, my working term) don't do this, or don't do it the same way. People who've gotten their Pro-96s to do the first pure P-25 ICIS site have reported using an offset of 0 or of 4096, neither of which is anything like what we've used before.

I've now told you a little more than I know; hopefully a radio sks will jump in here and explain it to us.

With MPS CS you don't have to program in any offsets or anything like that. When I went back to Michigan in June, it's scanned the EMP SCS normally as it always has. I was concerned that with Astro 7.11 that there would be a problem with it scanning or tracking anything because there is an encrypted conductivity meaning that radios that are actually affiliated to the system have to have this encryption key loaded but

I use a program called VMFusion to create a virtual windows machine on my MAC to program my Radios. I have used this method successfully numerous times on many types of radios.

First I would suggest going to RadioReference.com to get the current radio network information for the radio services I wish to monitor. Once you get that data, fire up your vmfusion and start your windows machine and fire up the software you use to program your. Pro-96. Enter the radio system data obtained from RadioReference.com into your software, and write the data to your pro-96. I know this sounds complicated but once you get things set up and going it really is pretty simple.

Good luck!

This list is for discussion about anything related to Radio Shack's GRE built PRO-96 Digital capable Scanner. This includes Any and all Software for the PRO-96. You can also place your p96 data files for WIN96 software in the files section.

We are the official recognized List by both GRE America, and Radio Shack, And Starrsoft software For the PRO-96..... Several Members are on this list and Our Sister List.

Thanks for your support

I live in Harford County, MD. I have a Pro2096 and I receive Harford County just fine. For some unknown reason I canNOT get Baltimore County or City. I was wondering in anyone could reccomend the most economical "programming software" that a novice could use easily. Any suggestions would be appreiciated. THANKS!
Glenn

Hey Mike, Ted here; I used to go to school at John Carroll and I volunteered with Kingsville. In my recent trips through the area, I have noticed difficulty picking up those same counties, along with Howard. Since I live in WV, I have investigated the changes. I suggest the RadioReferencce.com site. For $30 / year, they usually stay up-to-date with frequency changes and talk-group re-assignmens. Balto Co still simulcasts at 46.4600, 46.2800, etc. Balto City may not be doing the same. SYSCOM uses 44.740 if you want to hear the Medevacs. As a novice, I have found RadioReference easy to use. Invest a few bucks into the programming cable and you should be good to go.

From: Ted
Topic: 14909 Message: 14909

Greetings all,

My Pro 96 has served me well for the past 3 years. It is on almost 24 hours a day, with earbuds under my pillow for night listening. It travels with me in the car and on the boat as the Ohio River barge traffic is good to keep tabs on.

Recently, I dropped my scanner; one of many drops. There is no external damage visible, but I have noticed some inconsistent reception. My scanner will receive all CONVENTIONAL channels as before. The scanner will also receive ANALOG TRUNKING channels in the 800.000 range as before. I do receive some DIGITAL TRUNKING channels in the 450.0000 band range, but not the DIGITAL TRUNKING in the 800.000 band range.

I have reloaded the most recent TALK GROUPS for the DIGITAL TRUNKING bands from RadioReference.com. There is no improvement. NOTE: When I am on a clear hill top within eyesight of the tower, my CONTROL CHANNEL has the "buzz," but the reception is less than 10%.

Any suggestions oout there?

Truthfully, I have seen the Pro 96 on ebay for $175 to $225, depending on how the seller details the listing. For about the same price range, the Pro 106 is also on ebay. That's just my observation, since I have been looking at alternatives should a repair not be feasible.

Ted

I would be willing to sell mine for 200 dollars. This would include the battery packs books cables in any other accessories that I have for it.

I can assure you the unit is as good as new. 100 percent functional no dents scratches Dinks blemishes or any other issues whatsoever.

If you are interested please let me know we can exchange numbers and discuss it further thank you

Hey Robbie,

That is a fair price. However, if I am going $200, I am going to go upgrade to the Pro 106. You may want to put your Pro 96 on ebay, start at $175 with a "buy it now" of $250. Hope you are able to sell the Pro 96 if you're not using it. It is a good scanner.

Thanks,
    Ted

On my Pro23, I got a few more years by cleaning the power jack:

1. Use a toothpick to get out any actual gunk.

2. Spray with tuner cleaner/contact cleaner and while still wet, work plug in and out.

The contacts of this type of power plug include the center pin and a movable piece that is the outer contact and the switch for battery/line. Cleaning all this MIGHT help.

Sir,
Check the metal contacts. They might be corroded. Take a pencil eraser a use it to clean the contacts. Do it until they are new and shiny and bright. Then install your Battery pack.

Here is an update I received from RadioShack. My scanner is in "need of the receiver PCB assembly which is no longer available. It was failing reception tests on one or more bands." DUH! That's why I sent it for repair.

Since I am looking to replace my scanner. does anyone have experience with the RS Pro 106, and would you recommend that unit? (Or the Pro 197, but I like the portable to go.

Thanks,
Ted

I find the Pro-106 to be a very good scanner, and recommend it, but only to someone willing to spend the time to learn it. However, if you are used to the Uniden user interface, you may have difficulty getting your mind around the GRE way of doing things. I would strongly recommend spending time with the pdf owners manual before deciding.

This would bring up another concern, and that I would need to figure out with regard to software for the 106 how well it would do with screen reader.

Hi Jeff,

I believe I have seen them as low as $349 at RS on sale, and yes, they handle the new 700MHz stuff fine. I use PSREdit500 with mine, but mostly for backup and light editing. I did a lot of the programming with the keypad. You might email the publisher at support@... and ask what he knows about screen reader accessibility. I know a ham who is quite experienced with JAWS who may be able to help, if it came to that. The PRO-106 does have a very nice keypad, with a good layout & good tactile feedback. The central keypad layout with the speaker at the bottom vs the PSR-500 having the keypad at the bottom is largely why I chose the PRO over the PSR.

I heard that the keypad method of programming wasn't really that practical.

Hello Mike

If you stay on the control channel and you look at the lower left hand corner of the screen you'll see a capital M and then 2 numbers. Either a 36 or a 96. That tells you if it is a 3600 or a 9600 baud system. And what is the percentage on the lower right hand corner of the screen? If it's a really low number it might be too weak a signal to work with.

Also, If you have WIN-96 set it for a rebanded system and try that.

Good Luck

Ermin

"Ermin, you say regarding 9600 baud that "radio will tell you that".
Could you explain that a little more? How would the radio tell me that?"

The system in question is a P25 system (9600), so rebanded does not apply. On rebanded P25 systems you only need to change the frequencies.

Something else to try is toggling the ATTenuator to see if that makes any difference.

Question Joe

Is it only the 9600 P25 systems your talking about? I have three 3600 P25 systems here and they rebanded and I could only hear them when I changed it with Win96. Changing freqs didn't work.

Topic: 14963 Message: 14963

Hello,

I accidentally wiped out my scanner today. I'm looking for a p96 file that covers DFW. I'm mainly looking for Frisco, then the rest of the area,

There used to be a file under the Files and its no longer there.

Thanks for your help

Dennis

Hey Dennis, if you dont find the file here we have a group dedicated to DFW called DFWSCAN you might have better luck finding a local member with your scanner there..

Hello All,

I am new to this Forum.

We are currently operating a 7.9 Trunking system here on base with multiple MCC 7500 Consoles along with many talkgroups associated with our Units here on base. We currentlyhave a UEM and KMF where we do all the dirty work, setting up the RSi for the radios and developing keys for the kmf and OTAR. We are trying to, encrypt just a single talk group Would anyone happen to have any instructions to accomplish this. I know in the uem there is the "tg.mg" capabilities but don't see any info on encrypting just that talkgroup.

Any Help is appreciated

14971. LOS ANGELES AND SURROUNDING AREA P96 FILES

Yahoo group: PRO-96 (2008 — 2017)
Date: 2013-05-24 18:34:47 UTC
From: Bill
Topic: 14971 Message: 14971

hi all

I know its an older scanner, but it works great and gets the job done.

seems nobody has uploaded any new p96 files in YEARS. with all the smaller surrounding communities (beverly hills, culver city, santa monica, Verdugo Fire, etc) all having gone trunked, I cant seem to get them uploaded into my scanner. some have different offsets, steps, etc.

I wouldn't mind joining the radio reference paid member service, but with no updates to win96 in years, I don't want to buy something that winds up not working uploading using win96.

anybody have any P96 files they would like to share that have the new ICIS trunked systems, etc installed? brush fire season is upon us, and with the current earthquakes, I would like to be able to carry one radio rather than 3.

any suggestions? help?

Excellent and mostly current files on SoCalScan YG.

Even so, RR has pretty much taken the lead on up-to-date scanner info, plus with a paid membership you can download it. (With an unpaid membership, you can copy it, but you'll have to program it into Win96 yourself.)

BTW, Beverly Hills, Culver City, Verdugo Fire, as well as Montebello, Glendale, Burbank, Pasadena, Pomona (others?) are all on the ICIS system.

the files don't look very current on SoCal Scan....last updated same as the p96 group 2008-2009.

ok, where is the tutorial on how to use win96 with radio reference. looking at the win96 software, it directs you to a webpage that is non existent before asking for your username and password. if there was fresh info, like I said, I have no problem paying for a full ride, but not if it isn't going to work.

and yea, I kinda of mentioned that Beverly Hills, Culver City, Verdugo Fire, as well as Montebello, Glendale, Burbank, Pasadena, etc had gone trunked (meaning ICIS) and that was part of the problem I was having. with Beverly Hills going just the other day, that's why I was looking for updated files. I don't have time this weekend, but I guess ill have to read to book, figure it out and using radio reference, do it manually. BTW, when I look at RR, I see several primary and secondary freqs, and a mile long list of talk groups with the win 96 software, it shows MOT3600, etc, MOT 9600, tables etc. ill look at the win96 page again as well and see if I overlooked any info in there.

In SoCalScan, go to Files > Los Angeles .p96 Files > ICIS Configuration. There's a file there from 2011 which is current.

The problem of course with any trunking system is that you have to program in the entire system even to listen to, say, the dog catcher. That means you have a zillion talkgroups you don't need or want and are in your way. You'll have to sort that out yourself, I'm afraid, since every user has his/her own list.

For Win96, current edition, go to:
http://www.starrsoft.com/software/win96/default.asp
Click on "Get it" and it will download. (30-day free trial, IIRC).

This page speaks to connecting to RR, but it's limited to one aspect. More is in the Win96 Help file. (Getting Help to work right can be a problem; see directions for this topic:
http://www.starrsoft.com/software/WinXXHelp.asp

One thing about Win96 and the RS 20-047 cable: Follow the Starrsoft installation instructions EXACTLY.
http://www.starrsoft.com/software/win96/default.asp#installation
Following exactly will give you a good, working install; not following is almost guaranteed to foul you up.

From: Dave
Topic: 14312 Message: 14978

I have a problem with my scanner. I am using a laptop to stream my feed but am hearing a buzz/humm in the background of the feed. I have installed an audio filter and that did not help. My guess is the laptop power supply is the problem. Is there anything I can use to filter out the noise from the power supply before it goes into the laptop? Any help would be great.
David

you *might* have a ground loop. Turn around either the wall wart for
the scanner or the computer's power plug. If you can't, temporarily try
a ground lift plug (3 to 2 prong adapters).

If this fixes it, you know what the problem is. If you're handy with a
soldering iron you can make a replacement scanner to sound card plug,
with the ground connected on ONE SIDE ONLY. This will get rid of the loop.

Very common with audio circuits.

If this doesn't work, try a better power supply for the scanner.

I have read the book, and updated the firmware that does allow you to monitor the 700 mhz. whether or not it will trunk, I don't know.
I will continue to explore.
Thank you to all that have replied.

14992. '96 falling out of digital

Yahoo group: PRO-96 (2008 — 2017)
Date: 2013-07-07 12:23:43 UTC
From: Scott, KB3JQQ
Topic: 14992 Message: 14992

The Baltimore County, MD system is a P25 multicast system. It was choppy as an analog system previously, now it's digitally disrupted. My 106 & 197 also have some problems keeping going but are not as bad as my '96. I've tried all 3 DSP versions and they all either won't switch to P25 or drop back to analog giving me an earful of raw digital. I can find no settings on the radio or in WIN96 to make the radio stay in P25 mode. Since I don't listen to conventional with it it would be nice if a 1.41 DSP could be snuck out and just stay in P25 mode.

Anyone have any ideas to make my PRO-96 stay digital? It always does it when I step away from the radio and can't press scan...

From: mtcsmith
Topic: 14993 Message: 14993

I've probably posted this before but the reception on my pro-96 sucks. It has gotten worse. I think I know how to program the radio and I have programed other people's radios. Nine times out of ten it sounds like chipmunks. The tenth time is clear. I live on the very edge of Minneapolis and I program both the simulcast and the City Center channels. Are they interfering? And why hasthis progressively gotten worse? I check the "Closed" talk group ID's and I still get errant calls. Maybe I don't know how to program the radio, but I thought I did. Like I said, I've programmed others. Maybe my Pro-96 needs a tune up? Does radio shack do that with the Pro-96? Brad

Let me ask you this, how far are you from the transmitters of the systems that you want to monitor? Have you checked to see if the attenuation is on or off?

I've tried with and without the attenuation on and off. I think off is better. I am maybe 8 miles from the transmitters.

the win96-starrsoft page is your best bet short of asking google for .p96 files and seeing if they pop up. I have no idea about windows 8. im just starting to get in the grove with windows 7.

15015. File - Monthly Post

Yahoo group: PRO-96 (2008 — 2017)
Date: 2013-09-01 10:46:31 UTC
From: PRO-96@yahoogroups.com
Topic: 160 Message: 15015

This list is for discussion about anything related to Radio Shack's GRE built PRO-96 Digital capable Scanner. This includes Any and all Software for the PRO-96. You can also place your p96 data files for WIN96 software in the files section.

We are the official recognized List by both GRE America, and Radio Shack, And Starrsoft software For the PRO-96..... Several Members are on this list and Our Sister List.

Thanks for your support

Group Contact, subscribe & unsubscribe info:

15016. Pro-96 TCXO replacement part available ?

Yahoo group: PRO-96 (2008 — 2017)
Date: 2013-09-03 21:39:30 UTC
From: <jyelmgren@...>
Topic: 15016 Message: 15016

Looks like the TCXO in my Pro-96 is 100hz low ...I know it's not much but at the 800Mhz range this translates to around 10khz off frequency.
More than enough fo the digital to fail.
Aligned VR4 for 800Mhz but that throughs the lower UHF and VHF off enough to where they have poor reception.

Thought someone may have source a replacement since RS is hopeless.

Anyone have a parts Pro-96 that it could be salvaged from ?

Thanks

PS GRE used a 12.750 Mhz SMD device with no adjustment and of course the standard parts are either 12 Mhz or 12.8 Mhz

I think you can still take it to radio shack and have them send it to their in house techs for repair. its worth a try.

It seems that radio shack wants to force you into a store vs. just taking a parts order online or over the phone.
I have the RS part number but from one of the other forums it seems they no longer have parts or are selling parts anymore for the Pro-96 .

The lack of parts usually implies that all support is cut off including repairs

GRE (the manufacturer of the PRO-96) went out of business a little over a year ago. Add to that, the PRO-96 has been out of production for over 5 years. I am not particularly surprised that parts are hard to come by. Sad to see the fade, though...it was the last scanner I helped develop when I was at RadioShack. I still have one that was provided to me as a parting gift...and no, you cannot have the TCXO out of it. :)

Guys,

I sent my Pro- 96 off to Radio Shack. Took 2 weeks, start to finish. I had a volume P O T problem. Came back just perfect, up to factory specs. No complaints. Yes I could have repaired it myself. Who has time or the right equipment? I don't.

Thanks,
Bill A.Black

I have a Pro 96 that won't receive anything . It scans but won't receive. I called RS , they said it would be $60 for Diag. And cheaper to buy a new one. I had to tell him it is older Digital. It may be sort it to fix it, I'm still thinking about it.

Does it receive anything ? WX ?

If it's just 800 thats dead you may want to try the VR4 alignment ...it's on one of the web pages ...forget which one though.

so the PRO96 is worth less than 60 bucks? I haven't looked on ebay, but
that sounds very low, considering its features.

As I read the OP's message:

They didn't say the repair cost, so it may well be more than the value
of a 96. All they said was that it would be $60 just to look at it (not
repair it).

But, as 106s are going for around $300, the 96
likely isn't worth more than $150-200 these days.

Remember, it can't even trunk 700 MHz.

Several states right now, such as PA, OH, I think I noticed
that AL was on 700 MHz, and several others, I'm sure.

15035. Unit sounding like it's slightly off frequency while trunking motorola 800 mhz annalog systems

Yahoo group: PRO-96 (2008 — 2017)
Date: 2013-10-17 08:06:21 UTC
From: John H
Topic: 15035 Message: 15035

Hi all: I've noticed over the past few months my pro-96 is having an issue pulling in a decent signal on 800 mhz motorola analog trunked systems. I put in the control channel[s] but all transmissions sound like I'm just slightly off the frequency. I"ve tried playing around moving up and down a step or 2 while entering the freque to see if that helps but no such luck. I'm partially blind, so I'm not sure if I accidentally hit something in the banks I'm trying to use for said systems or not since I can't see the screen. It is properly trunking the systems, just the audio quality makes it sound horrible.
Any help would be appreciated...including which buttons to press and such.
Thanks all.
-Johnny

15037. Uniden BC200XLT Scanner

Yahoo group: PRO-96 (2008 — 2017)
Date: 2013-10-25 18:38:04 UTC
From: <audioman3@...>
Topic: 15037 Message: 15037

I was cleaning out my basement and I found an old Uniden BC200XLT (with case and charger). I plugged it in and it comes on and seems to scan fine. It grabs the weather feed so I think it is OK. I'm betting the battery isn't any good but as I recall you can replace the cells in the pack (I also see on-line you can buy a battery pack).

I hate to just throw it away. I'll send it to the first person who emails me. If you will pay the shipping cost it's yours for free.

Send the email to rick.spehar@gmail.com.

Were saying good bye to our Pro 96 and we have listed on Ebay it's Specially Pre Programmed for the Florida Sunshine Coast, here's the link http://tinyurl.com/mkq5r5r
It's been fun.
Thanks

15044. 700 MHz and Pro-96?

Yahoo group: PRO-96 (2008 — 2017)
Date: 2013-11-07 22:41:37 UTC
From: Jeff Kenyon
Topic: 15044 Message: 15044

Hi, I was just curious, but is there any way that I can go about programming and monitoring a 700/800 MHz P-25 system with the Pro-96? I know that I would have to use software to do it, and the system I am interested in is the one in Monroe County, New York, and it is Phase I, and god forbid will not be encrypted.

15045. Re: [PRO-96] 700 MHz and Pro-96?

You can program it, but you will only pick up the voice grants on the 800 MHz channels. The 96 will not trunk 700 MHz, so you won't hear any voice grants on the 700 MHz frequencies.

15056. Data cable

Yahoo group: PRO-96 (2008 — 2017)
Date: 2014-02-24 17:12:19 UTC
From: Henry Salzmann
Topic: 15056 Message: 15056

I recently got a new Dell computer running Windows 8.1. What cable(s) do I need to load my Pro-96 and Pro-97? The cables I have don't seem to work anymore. Also, How do I find what com port to use?

Thanks for any/all info

You'll need the USB cable. It's RadioShack 20-047, but I've heard they don't sell it anymore. (Check with ScannerMaster, maybe.)

On the Starrsoft Website, there are directions for installing Pro-96, including how to set the COM port. Follow these EXACTLY, and all will be well.

Note that I don't have Win8, so I'm not certain the above will definitely work, but I have no reason to expect it won't.

Hello Hank from Sunny and Hot South Florida

I still use my Radio Shack 20-047 cable with my Windows 7 PC. Should work with 8 also as long as you install the driver(s).

To see the com port go to control panel, device manager, click on ports then with that screen open plug in your cable. The screen will blink then show you the port that your cable is plugged in to. (on mine only port 1 was active. I plugged the cable in, the screen blinked then USB Serial Port (COM5) was active. That is the port WIN96 should use.)

73

That's been replaced with the 20-546 which I used for my 97 and 96 with no problem with the win96 and 97 programs using windows 7. Ratshack still shows them online for 30 bucks plus shipping and maybe in stores. There are the older ones on EBay for an outrageous price! DON'T waste your money! It comes with the adaptor for both size jacks on the scanners and its usb. DON'T mess with a serial to usb or vice-versa. I have done that with a weather station and its a nightmare with the drivers.

Radio Shack has cables that are for Windows 7/8 to use with the Pro-96 - however I found that the cable I bought when I had XP works (at least on Win 7) as long as you do NOT install the software that came with the cable - Windows 7 doesn't need it. However I am unsure if it will work with Win 8. As far as the COM port, it should be either Com port 1 or Com Port 3, as usually Com port 2 is reserved for printers (even though most printers are USB based now). On my WIN 7 PC it is Com 3.

Sometimes with the PRO-96 it becomes necessary to delete & reinstall the programming. Somehow it gets "off frequency" and reinstalling the programming usually fixes it. You also need to make sure the update from Radio Shack has been installed - this is an old one, however it is still available from Radio Shack at http://support.radioshack.com/productinfo/DocumentResults.asp?sku_id=20-526&Name=Radio%20Scanners&Reuse=N http://support.radioshack.com/productinfo/DocumentResults.asp?sku_id=20-526&Name=Radio%20Scanners&Reuse=N or here http://www.radioshack.com/search/softwareResults.jsp?kw=pro-96
http://www.radioshack.com/search/softwareResults.jsp?kw=pro-96
Hope this helps

I had the exact same thing happen with my PRO-96. I would program the radio, hit scan, the radio would appear to start scanning normally, but it would then stop. I was reprogramming the radio for a trip (using Scan Cat), which involved adding lots of new frequencies.

The problem was caused by having some frequencies in memory that, for like of a better term, the radio "didn't like".

When the radio was having this problem I would hit manual and soon noticed that it was always on a handful of frequencies. One that I remember was 152.0075 MHz.

The problem was similar to a birdie, but there was nothing breaking the squelch.

In the end I figured out the handful of frequencies that were causing this problem. Once I determined which frequencies were causing problems (partially by trial and error) I was able to reprogram the radio without those frequencies in any memories. When the problem frequencies were gone the radio functioned normally.

Nope. The 96 won't trunk 700 MHz. And when they start using phase II, that's another way the 96 will be out on the street. But, it's still fine for MARCS or conventional.

A PRO-96 has some serious limitations.
It won't trunk 700 MHz.
It can only hold 150 TGs per bank
(My local FD has 143 TGs. It gets it's own bank)

A PRO-106 won't do Phase II. I put the
statewide Phase II system in my 106
and never heard a peep out of it the whole
time my PSR-800 was talking.

My '96 has become a "favorites" scanner.
I put the 20 or so TGs that I like to
monitor in my local area.

That's odd since the phase II system isn't using phase II yet, so it should be no different than monitoring a phase I system and the 106 can do that.

This list is for discussion about anything related to Radio Shack's GRE built PRO-96 Digital capable Scanner. This includes Any and all Software for the PRO-96. You can also place your p96 data files for WIN96 software in the files section.

We are the official recognized List by both GRE America, and Radio Shack, And Starrsoft software For the PRO-96..... Several Members are on this list and Our Sister List.

Thanks for your support

Group Contact, subscribe & unsubscribe info:

If the OP is referring to my Win96 program at http://www.starrsoft.com/software , it’s most certainly programming software for the PRO-96 and PRO-2096. It doesn’t perform any form of monitoring, trunking or otherwise.

And I have to chime in here to agree that Win96 is a great and easy program to use. On top of that, I'm a blind user and his program works very well with my special screen reading software. I bought a PSR500 a while back when the Pro-96 I was using died. I tried hard to work with it for two years, but trying to deal with the menu screens proved to be a big problem, and unfortunately neither psredit500 nor Win500 were as easy to use for bulk programming as Win96. I got lucky and found another Pro-96 on EBay a couple of months ago, and fortunately 95% of what I listen to can be monitored using that radio, so I'm back up and running just about completely now, thanks especially to Win96!

Thanks,

Pete De Vasto

I have never had a problem using Win96 or importing from RR. If your internet connection is not good, that can cause problems. When I had Charter, the connection would drop every 10 or 15 minutes which caused problems, but not Win96's fault. You do have to have a RR subscription to use the web import feature.

From: don@...
Topic: 12493 Message: 15111

When you say "even copying the URL", do you mean pasting a radioreference.com URL into Win96? If so, it sounds like you're using a very old version of Win96. There should be no place within the current version (1.74) of Win96 where you can modify any URL used to retrieve data from RadioReference.com.

This would certainly explain your problem. The method used by RadioReference.com for "web imports" changed a few years ago, and Win96 was modified to support that method in July 2009 (in version 1.61).

15113. Poor reception(garble)

Hello all....
I have a pro 96 that I've owned for about seven years purchase new.
I live in Springfield Va
And like to monitor fairfax county police/fire.
Which was not a problem until about over a year now the reception is very bad with a lot of garble.
Using a rs800 MHz Antenna .
Program with win96&radio reference
Any help on this would be greatly appreciated.

From: Melissa Williams
Topic: 15113 Message: 15114

Is the reception just poor on 800 MHz, or on VHF and UHF as well?

It is possible your scanner's tuning has drifted. If so , this is fixable, but requires an sound generator, and a small screwdriver to tune the screws inside on the discriminator deck. Try different antennas, and test it on all frequency ranges first.

Are you close enough to Fairfax County to receive them nearly full strength all the time. With P-25 that is generally what you need. It's all or nothing. Not like analog. Just a thought.

Hi Group,

I have two Pro 96 scanners. One of them takes about 10 to 15 minutes before it starts to scan. Once it is warmed up it works great. I have programmed the other one with the exact same upload and it works perfect as soon as I turn it on. Does anyone have any ideas what could be wrong or if it could be fixed.

Cheers,

Jim

To add more insult to injury, if that is a simulcast system that could be part of your problem too. The project 25 simulcast systems are generally pretty hard to listen to.

Also try turning the AGC off. That can cause an underwater effect in the audio.

Another suggestion is to point your radio to a spot where reception seems to be good and leave it there. The project 25 simulcast is far too choppy in my opinion in a lot of the areas I've been in.

Yes tried to toggle with the AGC to no avail.
Have not tried the tune button yet.
And yes I'm close,never had a problem before the rebanding.
Appears a lot of folks with 96s have this problem that I have read on RR.
One person changed the table settings and it worked for him.
Just not sure what to change in the table setting.

If the table settings fixed the issue, it can't be a P25 system.

I thought the Fairfax updated to a project 25 system at least for Public Safety operations. I don't know about the rest of the county services.

All I'm saying is that P25 systems use the same table - rebanded or not. After looking, it does appear to be a P25 system, so the table cannot be the solution. But, if they have more than one TRS, maybe the OP can clarify what he wants to hear.

Do you have an 800 Mhz antenna? I found that with my 96, reception is dramatically improved by switching to an 800 Mhz antenna. Radio shack carries them, and they are also available online from multiple sources.

15130. Keypad not working and upgrade information

Yahoo group: PRO-96 (2008 — 2017)
Date: 2014-06-27 16:34:33 UTC
From: kfir3003@...
Topic: 15130 Message: 15130

Hi everyone, i just got my Pro-96, after few hours the keypad has locked without any success unlocking.

I've reading on this group and some people has fixed this upgrading firmware or something like that.

Could anyone tell me how to do that?...

Thanks a lot.

Also turning the scanner off then on again should unlock the keypad. If you have a computer and have the cable to connect your scanner to it, you can do a search on something like “upgrade pro-96 firmware” and you can get to where upgrades are available.

There are 3 DSP upgrades out there
and you'll have to try all three on your

system. My system works best with 1.2.

1.2, 1.3 & 1.4 are available.
If they are not in this group's files
section, I'll put them up. LMK.

The 96 won't trunk 700 MHz. There is a SW mod to make it receive in conventional mode (google expanded frequencies pro-96) but it still won't make it trunk 700 MHz.

This list is for discussion about anything related to Radio Shack's GRE built PRO-96 Digital capable Scanner. This includes Any and all Software for the PRO-96. You can also place your p96 data files for WIN96 software in the files section.

We are the official recognized List by both GRE America, and Radio Shack, And Starrsoft software For the PRO-96..... Several Members are on this list and Our Sister List.

Thanks for your support

15156. repairs and some potentially sad news

Yahoo group: PRO-96 (2008 — 2017)
Date: 2014-12-04 13:49:40 UTC
From: Jeff Kenyon
Topic: 15156 Message: 15156

HI all, I have seen an article about Radio Shack in general that is not very good. It talks about how it may be the last holiday season for them. If anyone would like I can forward that to you.
ON a related note, I am planning on bringing my Pro-96 a long with another item for repair hopefully tomorrow as I take care of other business in that area. If RS does end up going under I wonder what other repair resources there will be?

15157. Re: [PRO-96] repairs and some potentially sad news

Uniden Repair will work on all brands of scanners. Repairability is subject to parts availability. Proprietary parts (case parts, masked ROM, etc) aren't likely repairable, but most parts are actually commonly available.

They use to be a good electronics store where you could buy electronic components and schematics etc. but they are only a toy/cell phone store now.

Well, I'm going to call before going. I not only have to bring in this unit but also general coverage receiver with the cassette recorder. I take it it's probably not going to be supportive though. I will see and if not I will just have to hunt around for somebody.

From: Pete De Vasto
Topic: 15156 Message: 15173

From a blind user perspective this is, indeed, very bad news. I had a Pro-96 go bad on me a couple of years ago and replaced it with a PSR-500, and while I was able to get my main frequencies programmed in via not-too-accessible PC software, it was just about impossible for me to add frequencies on the fly while “out on the road”. I got lucky and found another working Pro-96 on EBay a few months back and for now I’m happy even though there are certain systems it’s not able to monitor. Least I can work with it more easily when I’m out and about, plus Don’s program for the 96 is very accessible, partially due to his willingness to work with me when I first started using it.

There's lots of deprecated PRO-95's around here.They no longer work on any system in the BaltoMetro area. My neighbor has one and swears it stillworks. All it gets is the FD simulcast on 46.46.
The minimum is a PRO-96, even with it's limitations
of only 150 TGIDs per bank and not recognizing a
patched TG. Our FD has 143 TGs. All FD in one bank
and all others in another bank. Wildcards are out
because one bank doesn't know what the other bank

is doing.
As an aside, what needs adjusting inside the radio? Is
there a TP and a specified frequency? Mine gives me
un-decoded digital on at least one out of 25 transmissions.My 106/197/800 work great in the same locations. ==
Have scannerS, do listen.

From: "brian brian b18c1crx@hotmail.com [PRO-96]" <PRO-96@yahoogroups.com>

I think I have five pro-95s that need some sort of repair as well.

Good Day All,
I have seen the email exchanges taking place with regards to RS not being around much longer. With this in mind, I have a Pro 96 and a Pro 97 both complete that are not being used that are just lying in a box. I was wondering if anyone here would be interested in them and what they would be worth. I would rather have someone put them to use than see them in a box. Please let me know.

Thanks,

Scott

Re: [PRO-96] repairs and some

potentially sad news

Uniden Repair will work on all brands of

scanners. Repairability is

subject to parts availability. Proprietary parts (case

parts, masked ROM, etc)

aren't likely repairable, but most parts are
actually

commonly

available.

HI all, I have

seen an

article about Radio Shack in general that is not
very

good. It talks

about how it may be the last holiday season for
them.

If anyone would

like I can forward that to you.

    ON a related

note, I am

planning on bringing my Pro-96 a long with another
item

for repair hopefully

tomorrow as I take care of other business in that

area. If RS does end

up going under I wonder what other repair resources

there will be?

The fact that you're blind makes it more difficult for you, I appreciate, but realize that you're not alone out there. (If you have Comcast, you're near enough to somebody that can help you; if you were in, say, Alaska North Slope, maybe not so much.) There is almost certainly someone in your area who will be glad to help you (even if you need to pay something).

Also, there are places like ScannerMaster which will program scanners you buy from them (or you can buy a Uniden Home Patrol, which is "self-programming"), and you could check with them and see if they'll program your scanner for your area (you'd have to mail it to them, I'm sure).

There are answers for you, though they might take some finding.

The only thing that surprises me about RS going broke is that it took so long, what with their historically lousy service:

In 2008, I broke my Pro-96's belt clip. I asked in three local stores, but was told in all that they couldn't order it. (In the third, the one salesperson was obviously in a hurry to get back to selling cellphones--on commission, I'd guess.) I attempted to order by phone, and was told it was not possible. (I never did get the clip, but I did get a leather case from ScannerMaster and have been completely satisfied with it.)

I swore I'd never go back to a RadioShack, and I haven't; they sold me a $500 radio and they won't service it!? How many people are there like me?

Over 30 years ago, my father commented, "RadioShack has good stuff, but you have to know what you want, because the salespeople don't know anything about their stock." (An allegation I've almost always found to be true.)

They made a move from "electronics parts" to (as someone put it in this thread), "toys and cellphones". Bad because this put them in direct competition with (read: in the path of the steamrollers of) BestBuy, WalMart, ToysRUs, etc. During a time when companies were realizing they'd need to concentrate on what they could be the best at, RadioShack moved their concentration from what they were "the only" at to what they could never be best at.

I can tell you they dropped support and repair over 2 years ago. I have 2 2096's that need new keypads and I cannot find anyone that can fix them even GRE would not touch them when they were still in business. I would never buy a RS product again unless it was a screwdriver! Gil

From: Pete De Vasto
Topic: 15156 Message: 15189

I’m very aware of the types of services places like ScannerMaster offers, and while getting a scanner pre-programmed for me is a nice option, I’d need help from someone to tell me which scan list/channel a particular thing I wanted to listen to was located on. As I indicated in my other e-mail, I did work with a PSR-500 for a while, and was able to program all the frequencies/trunked systems I needed via a computer so I could at least start out to a place like, say, SFO airport and be able to tune to a particular frequency with no difficulty.

The problem comes up when I either try to directly program a new frequency or trunked system when I am not near a computer and have to rely on these new scanners’ menu system. Since the Pro-96 doesn’t have these menus, I can hit Program, enter a frequency, and go.. And, if I do searches and find something I want to hold onto, I have control over what channel/bank I want to store it in.

Text-to-speech technology has become a lot cheaper lately, it’s too bad a company like Uniden or Whistler isn’t up to trying to incorporate it into a new scanner! <sigh>

For now, I can only hope that my working Pro-96 stays healthy and if for some reason it fails hopefully I can find a replacement until something better comes along.

Thanks for listening,

Pete

Where are you located? Here in Western Ny we are getting a Project-25 Phase Ii system. This doesn't leave too much in terms of choice as to what to get in terms of models. Also, what are you using when it comes to a screen reader? I have JF W 16 and I hear that the software for the 500 is supposed to work well.

I'm in the San Francisco area. I also have JAWS 16 and PSREdit500 sort of works with it, but again my problem with all these scanners is that if you unplug them from a computer and try to do searches or program new systems or frequencies while out and about you can't do it because the menu system isn't usable..

You've been able to program independently though on the computer right? The BCD436HP has got its own software, and I eventually would like to get one. As I said other then the PSR-800 which is a touch screen for P-25 Phase II that is the only other game in town as far as handhelds goes. Is there much P-25 Phase II in your area? They say that our new system will be phase II but no phase II groups as of yet, and hopefully they will not go overboard with encryption either if there is any. I haven't seen any encrypted groups here either.

Looks like your query has gone unanswered. I'll try it:

1. RadioShack is a bad idea. Even if they have something worth buying, they won't support it.

2. ScannerMaster is good as a vendor, limited only by being mail order/online, vs. a local outlet.

3. For the novice (or even for veterans who don't have a [psychological] need to "DIY"), the Uniden Home Patrol looks like a very good idea. (Uniden has been doing scanners since forever and is a stable company, AFAIK.)

The Home Patrol can be set by entering one's ZIP Code. Of course, it might well be that what you get is limited to a "standard set" (the price of automation). So if you want, say, your local towing company, that might not be possible. (I'm not at all experienced with the Home Patrol, so I can't say for sure exactly how it operates or what its limits are.)

4. There are other options for anyone who is willing to DIY, including a programming service (e.g. ScannerMaster) or computer software coupled with RadioReference.com.

From: Johnny H
Topic: 15196 Message: 15196

Hey folks, Here's the deal: My faithful pro-96 has finally bitten the dust...The volume/power knob doesn't even work to turn the unit on any more...The volume had been getting stuck on ful or near to full for the past year or so but I was able to make it work.
The plan is to get a Uniden HP in the next year or 2, but that's just not in the cards right now.
I'm looking at getting another pro-96 or a pro-106 on Ebay to do me until then. The 96 did everything I needed anyhow.
The city where I live is in the process of installing a Apco Phase I system, I know both units will do that. I'm just wondering which one sounds better decoding phase I? I seem to remember one time when I was visiting Michigan, my unit didn't follow the MPSCS system very well, but I think I remember reading something a while back that a lot of scanners had issues with that phase I system. Just wondering if the 106 would follow a phase I better or the same.
I'm partially blind and love the old school way of programing the radios, with channels/banks...I guess being as object navigation is the way of the way of today, I'm going to have to get used to doing things that way. I believe the 106 was the first rs unit to introduce that concept?
Thanks in advance y'all.
-Johnny

Hey folks: My faithful pro-96 finally bit the dust after 10 years of service. The volume had been stuck on full for the past year or so but I was able to make it work, now it won't even power up.
The plans are to get a Uniden HP in the next year and a half-2 year but that's not in the cards right now.
I'm hoping to pick up another 96 or a 106 on Ebay to do me until then.
The 96 did everything I needed system/mode-wise.
My city is currently installing a phase i system, I know both the 96 and 106 will do phase i, but I seem to remember having a lot of issues with Michigan's state-wide phase i system on my 96 back in the day when I visited. Does the 106 follow phase i any better?
I'm also partially blind and much prefer the old school channel/bank way of programing the unit. I think the 106 is the first object oriented radio RS put out? Being as that is the way of today and the future, guess I better get used to it.
Thanks in advance y'all.
-Johnny

Programmed NH EDACS Manually. No signal? Mode is EDACS. I put the control frequencies in order in bank 3 starting at channel 1. I then put in the 4 digit talkgroup #'s in EDACS mode. No signal? I am 10 miles away.

Do the control channel LCNs match the channel number exactly?

Can Radio Reference do it automatic? I am a member of RR and have all the right software for the scanner BCT15 . Trying to do the power company for the BCT15. I can't get to download . It is EDAC Narrow Band.
Using ARC15 for the scanner software.
Need a step by step way to program the BCT15.

Thanks,
Bill A. Black

This list is for discussion about anything related to Radio Shack's GRE built PRO-96 Digital capable Scanner. This includes Any and all Software for the PRO-96. You can also place your p96 data files for WIN96 software in the files section.

We are the official recognized List by both GRE America, and Radio Shack, And Starrsoft software For the PRO-96..... Several Members are on this list and Our Sister List.

Thanks for your support

Group Contact, subscribe & unsubscribe info:

Post message: PRO-96@yahoogroups.com

Nope. The 96/2096 does not have user-updatable firmware.

You can scan 700 MHz but not trunked.It will automagically switch to DG mode. ==
Have scanners, do listen.

this is no answer to your question but reminded me of back in 1990s on a usenet forum about mods to the RS2006 scanner (including cutting diode to receive cellphone freq). Someone asked how can it be modded to receive 512 to 806 MHz. Another answered, "buy a portable TV set. The picture is better!"

The GRE manufactured Radio Shack PRO-96/2096 will not trunk track the UHF 380 MHz, or 700 MHz bands. It will not decode P25 Phase 2. It will decode only P25 Phase 1 CAI on conventional, and in the following trunked bands: VHF High, UHF, 800 MHz, and 900 MHz. t works great on both the legacy Motorola systems (SmartZone and SmartNet), Harris legacy EDACS (analog only!), and the extremely rare Motorola "Type I/IIi Hybrid" systems still in use. It also is excellent on the P-25 Motorola ASTRO-25's, and from what I can tell, the Harris P-25ip's also (in the aforementioned bands only). As mentioned you can place an 700 MHz, or 380 MHz system in as conventional repeaters, and lock out the CC's daily. You can decode the P25 (Phase 1 only!), but can not identify TG's due to no trunk tracking capability in those bands.

Oh, I forgot to mention, to even open the 380 MHz and 700 MHz, you must use ARC96, or Win96 to open the "extended frequencies" option. Same to program in rebanded 800 MHz systems.

On Tuesday, January 6, 2015 2:28 PM, Melissa Williams <christiantalus@...> wrote:

Check the EXTENDED FREQUENCIES box in software.
(then write to the scanner)

Still won't give you trunking.

Joe M.

15229. Scanning Moto Type II systems with PRO-96

Yahoo group: PRO-96 (2008 — 2017)
Date: 2015-02-08 18:23:14 UTC
From: guy@...
Topic: 15229 Message: 15229

I am an amateur radio operator of nearly 40 years (K4ICP, Amateur Extra class) and a scanner enthusiast for at least as long, but I took a roughly decade-long hiatus most recently. I've now put my ham rig back on the air and dusted off a PRO-96 and a BCD996T.

I had to refresh my memory that the 96 did not take firmware updates, so this may be the reason I can't seem to monitor my local public safety Moto Type II multi-agency system. I've programmed the frequencies and told the scanner the bank is for Moto, but I do not copy any transmissions. I'm listening to an Internet feed of the same system, so I know when it is in use and, roughly speaking, by whom. Most traffic, including the dispatch function seem to be un-encrypted.

Is there something I need to know about what's happened in the 9 years since this scanner hit the market? It would seem from the manual to give every indication of being capable of scanning the system in question, but I'm not having any luck.

The scanner works great with conventional frequencies.

Many thanks for any and all suggestions or edifications!

73

Without knowing which specific system you are talking about, it will be impossible to provide definitive information. Link to RadioReference system page would be nice...

If he is in Madison County, then there are Motorola Type II systems that can be monitored and a P25 Phase 2 statewide system that cannot be monitored. I'll await his clarification, though, to provide a more definitive answer (if someone doesn't beat me to it).

This list is for discussion about anything related to Radio Shack's GRE built PRO-96 Digital capable Scanner. This includes Any and all Software for the PRO-96. You can also place your p96 data files for WIN96 software in the files section.

We are the official recognized List by both GRE America, and Radio Shack, And Starrsoft software For the PRO-96..... Several Members are on this list and Our Sister List.

Thanks for your support

15236. PRO-96 Off Frequency?

Yahoo group: PRO-96 (2008 — 2017)
Date: 2015-03-24 12:58:02 UTC
From: toledohamradio@...
Topic: 15236 Message: 15236

Hi, as mentioned on the BCD396XT list, I have a PRO-96 that USED to work about 70% of the time on a local simulcast CQPSK multi-site P25 9600 system that now decodes 0% to 2% max. Did a total reboot of the radio and dumped only the control channel in - still bad results. Someone mentioned that the master oscillator gets off frequency - but it that was so, how can I still decode a single site 3600 system? Very confused, Don't want to junk the 96, but the 396 proves that my antenna is okay to get an acceptable level of decode.
Suggestions?
John

Hi John,
I saw your post here. I'm the one from the 396xt list that had the PRO-96 that drifted off frequency. Have you tried programming in the control channel one step lower and/or one step higher in frequency? That might be worth a try to see if anything changes for the better or worse. That's how I found out mine was off. After I found out the control channel decoded pretty well at one step lower in frequency, I then had to load all of the system voice channels into the scanner one step lower in frequency in order to hear audio.

Worth a try.

I did try a frequency 6.25KHz off the CC, and I got some percentage of decode, so I bit the bullet and took the radio apart.
Cranked the VR4 adjustment all the way CW and bingo, it went from a useless POS radio that had a 0-2% decode to one with 50,60,70% decode that is just about usable again - amazing- I thought it was all the fault of the simulcast system and my antennae, but that's only 25% of the problem, the damn radio wouldn't decode P25 anymore until I cranked that adjustment. Also, it did NOT make my radio off-frequency for weather or other usage either. Wish I had more 'turn' on the VR4 to crank it all the way to 90%, but I'll take what I can get - just afraid it's going to return to being useless again, but I'll enjoy it while I can. I still need to work on the antenna again to avoid the digital motorboat and crash and burn choppy audio on the simulcast system, but 60% sure beats 0 anyday.

Pretty exciting when you take a leap of faith and it actually works! So for some long-suffering P25 users on their PRO-96, the VR4 adjustment is a game-changer. Used an eyeglasses screwdriver (which seemed almost too big!)

thanks.

I've given up on mine. Even after a "professional" realignment, it still doesn't do any P25 800 MHz systems, and the conventional stuff isn't too good either. I've got a BCD396XT that works really well, so the PRO96 isn't needed anyway.

If anyone here is interested in a semi-working, off-tuned PRO96 for parts, drop me a PM and we can discuss price. If you have a service monitor and good freq counter, you may be able to play with it and do the posted alignment again. Other than that, it turns on, scans, speaker is good, black and yellow battery trays, has latest DSP firmware upgrade.

NOT QUICK FIX

Hopefully you don't have to do this. It involves opening the case and checking both the ground and the center pin and resoldering the connections as necessary.

This should only be done by someone adept at soldering microelectronics.

Good luck.

Here is what I do with a BNC antenna jack when I suspect it isn't making contact:

QUICK FIX

For most RS scanners there is a white plastic center with two metal prongs in it. The 2 small prongs are the contacts for the duck antenna or coax.

I get a thick tapered needle , and wedge it between each prong and the white plastic and GENTLY push the prongs towards the center about 1/64 or .016 of an inch maximum.

This must be done gently a little at a time, because bending them too far and back a few times could break the prongs.

Also make sure you don't go too far or the pin on the rubber duck or coax won't fit between the prongs. Gently replace the duck making sure that the pin is going between the prongs.

I usually add a small drop of contact cleaner placed on the antenna pin of the duck antenna with a tooth pick.

If that doesn't work, try a different antenna. Or :

NOT QUICK FIX

Hopefully you don't have to do this. It involves opening the case and checking both the ground and the center pin and resoldering the connections as necessary.

This should only be done by someone adept at soldering microelectronics.

Good luck.

Subject: RE: [PRO-96] looking for anyone in the Greater Rochester and/or Buffalo areas that could help with a fix on the Pro-96 with a simple repair

Here is what I do with a BNC antenna jack when I suspect it isn't making contact:

QUICK FIX

For most RS scanners there is a white plastic center with two metal prongs in it. The 2 small prongs are the contacts for the duck antenna or coax.

I get a thick tapered needle , and wedge it between each prong and the white plastic and GENTLY push the prongs towards the center about 1/64 or .016 of an inch maximum.

This must be done gently a little at a time, because bending them too far and back a few times could break the prongs.

Also make sure you don't go too far or the pin on the rubber duck or coax won't fit between the prongs. Gently replace the duck making sure that the pin is going between the prongs.

I usually add a small drop of contact cleaner placed on the antenna pin of the duck antenna with a tooth pick.

Jack W8JAK

Subject: [PRO-96] looking for anyone in the Greater Rochester and/or Buffalo areas that could help with a fix on the Pro-96 with a simple repair

Good evening all, I am currently looking for someone in the Greater Rochester Areas who could help me with a quick fix on my Pro-96's antenna connector. If anyone can help please message me off line. Right now I am in Rochester but will be in Buffalo for a while starting in early May. Any help would be great, and thanks in advance.

I suggest copying a bank into another bank and leaving that one OPEN so you can find new and patched talkgroups and dump them into the 'Closed' bank.

15269. Don't be afraid to adjust your PRO-96

Yahoo group: PRO-96 (2008 — 2017)
Date: 2015-07-20 13:32:45 UTC
From: toledohamradio@...
Topic: 160 Message: 15269

I'm still mad at myself for not returning my PRO-96 back to RS years ago and putting-up with such horrible reception to the point of nearly junking the radio and not even using it because of the poor adjustment in it for a P25 simulcast system.
I had next to nothing decode rates, then I adjusted the "magic potentiometer" inside, and got back to 60-80% decode rates, to where it is fairly usable. So if you've got a putrid <35% decode, even with a super-duper antenna, read about how to make the adjustment in your radio- you've got nothing to lose.

I made the adjustment, and the scanner is back to usable condition. As always, be very careful when tinkering around inside your electronics. One wrong move, and you've got a paperweight.

The biggest issue with the PRO96/PRO2096 is that it does not track 700 MHz. systems. While it can be made to monitor them by a software hack, it will not track them.

That said, they make a great radio for use with PRO96Com, especially after the adjustments.

The other issue with the 96/2096 is that youcan only have 150 IDs per bank, and bankswon't talk to each other. My local systemhas 143 TGs just for fire, so I put firein one bank and the rest of the system in
another with wildcards. If you hit a wildcardin the fire bank and it's a police TG, youonly get the TG ID number, no tags. I useit as a "favorites" scanner, putting onlythe really local stuff in it.
To get the 700MHz freqs, click the
Extended Frequencies box in Win96.
You can also pick up WWV on 20MHz after doing that. ==
Have scanners, do listen.

Did you try it with an AC adapter? Low power will affect audio first.
I COULD be the headphone jack as the switch in the jack switches off the speaker, but you would still have the audio using headphones.
Does it work on standard non-trunked audio, like the NOAA Weather Radio channel?
Squelch wide-open- any hiss on non-trunked conventional channels with CT off?
I would back-up your programming, then try a factory reset before giving-up hope on the audio end of things.
Good luck and let us know.

15278. Pro-96 stuck in analog mode on Astro digital trunked system?

Yahoo group: PRO-96 (2008 — 2017)
Date: 2015-08-18 04:51:52 UTC
From: Alan Henney
Topic: 15278 Message: 15278

Just reprogrammed a friend's Pro-96 for a Motorola 800 MHz system that has been rebanded.

I entered the three control channels and rebanded data.

The transmit site is a few blocks away so I should have a good signal.

But the radio appears to be stuck in analog mode. It shows the talkgroup ID and correct voice frequency but all I hear is Astro.

Am I forgetting something or is this radio broken?

Thank you.
Alan

If your using WIN96 did you the MULTI TABLE EXTENDED TABLES 800Mhz REBANDED?
That is the only way to get a 96 to work on a rebanded system.

Can the PRO-96 decode ASTRO? I can decode a P25 that rebanded by simply entering the control channels, but I didn't know if ASTRO was supported, or was it just the 'special' system that Cleveland had that was not decode-able?

They work great for Pro96Com, a data decoding application. While the PRO96 will not track 700 MHz. systems, they can be used to provide the data for them.

I would post an ad on the PRO96Com list if I were you, I am sure someone there would want them.

I keep mine as a "favorites" scanner sinceit can't hold all the TGs in my county inone bank. It's a lot easier to set it upas a decode radio for PRO96COM. Then I canuse Pro96Com to control my 106 or 197. I have2 orange cables and used the utility fromFTDI to change the serial number in one ofthem so they come up as different COM ports.I also didn't want to lose my investmentin my copy of Win96 from Starrsoft. I likedWin96 so much, I didn't hesitate to licensea copy of Win500 when I upgraded my scanner.My '96 is in pristine shape. It was such apain to use compared to my BC245XLT that itsat in the drawer until we went P25. Bythen I had a PRO-106. My '96 is programmedwith charged batteries and is ready to go. So the answer is they are still usable in some areas. == Have scanners, do listen.

Anybody else done the adjustment in their PRO-96 to improve reception? I really should have taken my radio back to RS many years ago when I thought it was just my 800MHz antenna since I could receive VHF fine, it was just 800MHz simulcast where it was useless - now after the tricky internal adjustment, it's fairly useful - finally- years and years later!

Just running along just fine for the last ten or more years. Best and most fun scanner I have ever had. Works perfect on our Palm Beach County system.

I have always just let it run the way it was from the day I got it, I now have 2 of them and never done any updates I just never trusted doing that and from some of the posts in here I'm glad I did not, some have had trouble after they do that.
They both run good so far.

The only updates for a '96 are DSP versions.Try all 3 for the best one to use in your area. One has special features to work better in LSM areas.A good antenna helps. Older units may need the internal tweak done.

15309. Win 96 Software

Yahoo group: PRO-96 (2008 — 2017)
Date: 2016-01-19 04:33:41 UTC
From: john.little17@...
Topic: 2025 Message: 15309

Hello All
I've been using Win 96 Software on my Pro 2096 for about 10 years or so. It works great . I had let the software sit idle for about 4 years and manually added frequencies to my scanner here and there. A few weeks ago I started using it again to get my Pro-2096 a little more current with new frequencies. The only issue I have is every time I open it I have to re-enter the Registration info even though it tells me that the Registration Info is correct and will be stored.Close the program and next time I use it , it wants me to re-enter the info again.It won't stay in the Software memory.Other than that it uploads and downloads just fine. I didn't have this issue with it back in the day. Nothing on the Starsoft Software page.

Thanks

John in SoCal

The registration info won't be successfully stored unless Win96 is run with administrator privileges.

Right-click on Win96.EXE and, from the pop-up menu that appears, select "Run as administrator". Enter the registration info when prompted. Close Win96. Subsequent runs will use the stored registration info - you don't have to run as administrator every time.

One of the biggest advantages is the ability to update the firmware.

There are also much improved channel management, an alert light for
channel activity, and improved performance.

The 96 has fixed banks and channels and only hold 150 TGs per bank,and the banks don't "talk" to each other. It also does not recognize
patched TGs. My local system has 143 TGs just for fire and if I putwildcards in each bank, it gives ID numbers for IDs in the other bank.My local PD patches to the next precient often and the '96 has no clueto listen to my TG when it happens.

I use my '96 as a favorites scanner. I just put the 15 or so TGs thatare really local to me. Many of the '96s need a tweak inside due to ageso that it doesn't blast you with digital noise instead of decoding.

First and foremost I think the biggest thing is the ability to track 700 MHz. systems, the PRO96/2096 would not do that.

As others have already stated, the new memory management and other features of the PRO106 and related radios (PRO197/PRO651/PRO652/WS1040 et al) and there is little if any reason to get a PRO96/2096 when you can get a PRO106 instead.

Unfortunately there are no Phase 2 capable GRE/RS/WS versions other than the ZIP Code units.

15321. Burbank Ca New ICIS P25 system on the Pro 96

Yahoo group: PRO-96 (2008 — 2017)
Date: 2016-03-05 06:17:48 UTC
From: mikekut@...
Topic: 15321 Message: 15321

The older Glendale Smartzone ICIS system and LAPD P25 conventional channels still work fine on the PRO 96. The new ICIS P25 systems work flawlessly on my 396XT however I've had no luck getting them to work on my PRO 96. I know I'll need to program in the 9600 multi tables however the Pro 96 only allows 6 tables to be entered but PRO96COM shows 12 in use on the on the new P25 Burbank site for example. Tables and tracking aside, even programming the Burbank site frequencies as conventional channels I only get some very spotty digital garble as if it is not demodulating the P25 transmission properly. Any advice would be much appreciated.

>Is there a way to clone from a 96 to a 2006?

I always wondered why radio programming software is such that none of the usual copy/paste functions like just about every other cntl-C and cntl-V can be used.

Speaking of 2006, back in the usenet days someone asked how they can modify their 2006 to receive freq from 512 to 800 MHz. One reply was, "buy a portable TV set, the picture is better!"

It's been my experience that the PRO96 loves the 3600 baud digital, but hates the 9600 baud P25. IF you are still getting LAPD, then I wouldn't mess with the scanner, BUT, if it's having trouble across the board, then it's time to play with the potentiometer inside the radio.

Getting off-topic, but Bill Cheek wrote 3 Scanner Modification Books- I believe that those covered many modifications to the Realistic PRO-2004 scanners and subsequent Radio Shack units.
Worth buying one of those off of eBay if you have an old scanner that you'd really like to modify big time. Great rainy day projects.

Let me know if you need any of the old Scanner Modification Books by Bill Cheek.

Wish he was around to write books for the new rigs- IF- there is anything you can do to them.

Bill passed away in July, 2000 - well before the 96/2096 was introduced.

15335. PRO-92 vs PRO-96

Yahoo group: PRO-96 (2008 — 2017)
Date: 2016-03-28 14:05:31 UTC
From: toledohamradio@...
Topic: 15335 Message: 15335

Is the only difference that the PRO-92 could only trunktrack analog audio trunking groups?
I think maybe it could trunk digital, but not decode the audio IIRC?
Were there more features on the PRO-92 that you could use that aren't on the PRO-96?
IIRC, the PRO-92 can decode 3 ANALOG trunking styles: analog Motorola (3600 or 9600??), Johnson LTR and EDACS? Are any of the latter two still being used?

The PRO-92, 92 A, and 92 B an ONLY recieve ANALOG signals. They do not have any digital capabilities. No VOCODER! The systems it can receive and trunk track are Motorola 3600 BPS CC *Legacy* (Type I, Type IIi (Hybrid), and Type II Both Smart Net, and Smart Zone. It can only do the analog TG's on Type II systems.) GE/Ericsson - Tyco M/A Com - Harris EDACS (Non ESK, and can not decode ProVoice) and LTR (Non Net, Multi Net, Pass Port).
Of those, the following are still in use, but discontinued and being replaced/upgraded - Motorola Legacy (Type I, IIi, and II), Harris EDACS. LTR is still widely used, but is being upgraded to NXDN (NexEDGE), DMR (MotoTRBO), or Hytera XTP digital formats in many markets.

I have a pro 96 and not sure what to have the software set for Charging?
This is my second pro 96 my last one I had plugged into my cigarette plug in and it burned up the batterys and melted the unit.
so I have it set 2volts in the software but the batterys won't charge now. just wondering what I should set it too. Thanks

You're for better off buying a NiMH charger and using
that to charge the cells for the reason you experienced.

You cannot correctly charge NiMH cells in series.
(which is the configuration they are in the scanner)

Do you mean the DSP update or frequency updates? Did you check the FILES section of the group for the DSP? Did you check RadioReference for the frequency updates?

BTW, the firmware cannot be updated in the 96 - at least not without replacing the CPU.

Apparently, you're talking about "programming", not "updating". "Programming" is what you do to get the scanner to monitor what you want it to monitor. ("Updating" is what you do to make the scanner work differently.)

For OHP, there are three ways to get the current programming, but all of them assume you have a connection to your computer and the appropriate software (both highly recommended):

1. Download from RadioReference (requires a paid subscription, which is a real bargain IMO).

2. See the archives of this group, to see if anybody has put a file there that you can download (for free).

3. Ask on a local group in your area (might be on YG or some other online forum).

(In #s 2 and 3 I've said only "see the archives" or "ask", but you can do both or either in either setting.)

What you want is the *current* programming for the agencies you wish to monitor; the relative age of what you have/used to have is irrelevant (as are the now-ten-year-old preloads that came with the radio).

Best wishes!

newnethboy

Yes. And since you have the cable, you're half-way there. I've used, and many of us on this list have used, Starrsoft Win96 software. This will download from this group's archives, other groups' archives, RadioReference, appropriate programming files (*.p96) and load them into the radio. You can then use Win96 to customize those loads (e.g. to insert, order, activate the talkgroups you wish).

One warning about Win96 installation: Follow the directions exactly for an easy install. (The alternative can be a huge mess.)

The 96 does not support trunking on the 700 MHz frequencies.
You will have to update to a newer model.

Hi,
Last year I adjusted the (R4) setting in my PRO-96, taking decode rate from 10% all the way up to 70%-90% for the first time in a long time. Now it seems like I'm back to the 50% level with some 0% crash and burn on the simulcast system. Has anyone had to readjust their R4 setting a second time, or are the radio parts aging and it can't be adjusted to track a 9600 P25 simulcast system anymore?
Thanks,
J

15361. If you're scared to readjust your PRO-96

Yahoo group: PRO-96 (2008 — 2017)
Date: 2016-05-06 15:16:21 UTC
From: toledohamradio@...
Topic: 15361 Message: 15361

Hi,
I should have returned my PRO-96 as I fought it for years until I finally readjusted it.
Don't be scared, as you have nothing to lose if you have 0% decode anyhow.

All you really need is a very small tiny phillips head screwdriver.
You will need the 9v ac to DC adapter for the test, or try to hold the batteries in, which is hard to do.
Turn off the PRO96. Slide off the battery cover and battery pack. Leave antenna on.

Take out the screws on the back of the radio and take back cover off.

Hook up the AC adapter, turn the radio on to the control channel and manually keep it there.
At the bottom will show the % decoding.
Now, look at the photo for the bottom Variable resistor #VR4.
Turn it a tiny bit, like 1/16 of an inch and see how the decode level is doing- is it going up or down?
Now keep turning it a tiny bit and wait 15 seconds to see if you can get it back above 75%.
If you get to 80% and turn it and it starts going down, try going back the other way.
DO NOT turn it so hard that it spins around- it is like a tiny volume control in that it will stop at the far left and at the far right- do not force it once it won't turn. Keep taking tiny baby steps tuning it.

You can do it.
Once you get it to decode above 75% most of the time, then turn it off. Disconnect power.
Put on the back cover. Insert screws, Insert battery pack and cover.
Turn on and see if decode is still 75%+.
If so, you did it! Now listen for a whole lot more talkgroups and less 'crash and burn' digital noises.

If all else fails and you don't want to attempt it, I would wager that someone on the list would buy your old PRO-96 so that you'd have some money towards a new PRO-651.

A PRO-96 will not trunk 700 MHz.A PRO-106 will not follow a Phase II system.
My PSR 800 covers my statewide 700 MHz Phase II system.
You have to pay to play. 4 Digital scanners and counting...
I still use my '96 as a favorites scanner. I have just my local
TGs programmed in to it for police and fire since it has other
limitations as well. One being the fixed banks and channels.

This list is for discussion about anything related to Radio Shack's GRE built PRO-96 Digital capable Scanner. This includes Any and all Software for the PRO-96. You can also place your p96 data files for WIN96 software in the files section.

We are the official recognized List by both GRE America, and Radio Shack, And Starrsoft software For the PRO-96..... Several Members are on this list and Our Sister List.

Thanks for your support

From: toledohamradio@...
Topic: 15361 Message: 15374

IF you're having trouble decoding a system, you should already have the control channel loaded in (see Radio Reference for the red and blue channels). Manually go to that control channel (MAN) and you'll hear the digital 'noise' hammering away and a 96: the system ID and listed last is the % (decode).
You are trying to get the % as high as possible without it going down lower.

15375. 700MHz decoding conventially in PRO-96?

Yahoo group: PRO-96 (2008 — 2017)
Date: 2016-05-09 17:07:56 UTC
From: toledohamradio@...
Topic: 15375 Message: 15375

Question: I know that the PRO-96 won't trunktrack a digital P25 system with 700MHz frequencies, BUT, can't you just enter the 700MHz frequencies and listen to them conventionally (with no control channel)?

How would you manually enter that from the front panel? Do you have to enter it as a trunked system or just "PGM" enter the 700MHz frequency "ENTER" and let it automatically select "MO"?

Thanks,
J

If you check the "extended frequencies" box in SW, and write
to the scanner, you can monitor 700 MHz conventionally.

You may already be familiar with this, but there’s a program called Win96 which can adjust all the settings and frequencies on a P96 if you can connect it to a PC. One of the settings near the bottom is a checkbox labeled “Extended Frequencies”. Checking this box openstheradio to get just about everything, including the 700MHZ frequencies.

HTH,

Pete De Vasto

The 96 will not follow a 700 Mhz system.

If it does not follow the 800 Mhz system then it may have been rebanded and you need to re program the 96 to reband it.

All 800 MHz systems in the USA should have rebanded
to 6.25 KHz spacing using 12.5 KHz bandwidth.

The 96 will not follow a 700 Mhz system.
If it does not follow the 800 Mhz system then it may have been rebanded and you need to re
program the 96 to reband it.

Where are you getting that from, Scott? While I agree for systems in the 851-854 MHz range, in the other segment rebanding was optional or not required at all.

The MARCS was rebanded. All 800 MHz sites on the MARCS-IP are rebanded, and P25 Phase I.
 With P25, you don't really need to worry about setting up the rebanded tables, as that
data is handled by the CC. All one needs to do is to is program the CC's only, and the
TG's. But to cover all your bases, you can go ahead and use the rebanded settings in the
software for the 96, such as ARC96, or Win96, as well as hit the expanded frequencies.
 Then just program the 800 MHz sites using CC Only method. You must program in the 700 MHz
sites as conventional frequencies, using the FM/P25 mode. Leave the current CC locked out
as it will lock up on the data. You will then hear the conversations, but will not see the
TG ID's, so you will have to really know by sound the group you are hearing. The one magor
other drawback is that you can't lock out encrypted audio using this method, so when an E
TG is active, you will hear the lovely annoying digital growling of ADP or AES-256
Encryption. It would be better to spend the 200 or so bucks and get an newer digiscanner
that can trunk 700 MHz and 380 MHz stuff.

MARCS is not a P25 system. MARCS-IP is a P25 system. While MARCS is slowly going away, it still needs to be programmed as a Motorola Rebanded system, and not P25.

What you said about CCs only is true for MARCS-IP. But you do not want to program that for rebanded settings for that system. Just program it as normal P25 trunked. (or in the case of the 96, program the 700 MHz frequencies as conventional).

My PRO-96 I have turned to monitoring conventional P25, LTR PassPort (using the MOT mode trick to cancel out most of the data bursts) and other things, as my primary P25 trunker is now an BCD396XT that I picked up for $250.00. I also run 2 PRO-92's one an original, other an B for other LTR, Air, and Rail (until CSX flips the full NXDN switch, then will have to use DSD+ and tap one of the 92's or the 96 to feed it.)

OK to clarify:MARCS is an Legacy Motorola ASTRO Smartzone using both analog and P25 TG's. It is rebanded. YES you can use the CC ONLY method to trunk track it just like ANY Legacy Type II Motorola TRS. You will need to use the rebanding tables to properly track it.
 MARCS-IP is an Motorola ASTRO-25 P25 Phase I TRS. It adds many 700 MHz sites to the 800 MHz ones in place as well as many "Local Municipal" Systems converted to P25 and running on the MARCS-IP Cores. Its 800 MHz sites are rebanded, but you really don't need to use rebanding tables on it. (Rarely needed on P25 systems, but there are a few.)

You have to enter them via software since you can only enter one by hand. Here is the info for Win96: (He has many updates after this one)

Version 1.58 2008.09.12 11:20 (GMT -0700)

Added "800 MHz Rebanded" to the set of pre-defined bandplans in the Extended Tables dialog

Source: <<http://www.starrsoft.com/software/win96/>>

Just enter them like a regular freq, no MOT involved since it won't trunk. Before trunking scanners that is how I used to try and listen to the local EDACS system, it is difficult if not impossible to make any sense of what you hear, bits and pieces of lots of different conversations, plus annoying data tones. Also, I think the only way to get 700 mhz on a Pro 96 is with Starrsoft Win 96

She's offering to "edit" your file in order to make it load your scanner with the correct settings so you can monitor/receive what you're saying you wish to monitor/receive.

She's offering to edit your file for you precisely because you're saying you don't know how to make the correct settings. When she sends it back to you, it'll have the correct settings for what you want.

Cleveland used to have a VSELP system. Key word: used.
Those could not be decoded on scanners.

Akron was a Type II (I think) system.

Topic: 15375 Message: 15427

I'm not sure if the deviation/bandwidth is okay to still receive a station 2.5KHz off frequency if it's narrowbanded? Fortunately they did not require narrowbanding on the VHF-Low band; too bad they didn't leave VHF-High band alone and only narrowband the UHF/800MHz frequencies. It turned into a payday for Motorola by forcing the narrowbanding on VHF-Hi as many fire departments had to get new hardware, and most small businesses got sold on the unmonitorable DMR MotoTRBO radios (which Whistler scanners have reportedly been able to scan, unless Moto go around and sells everybody on encryption, then SOL again).

Press function then mode to lock/unlock the keypad, as per the attached manual. If that doesn't work look at doing a reset listed in the manual. Use Pro96 et. al. to backup first though. ;) Tracy KO7B

Will your backlight come on when you push the button for it? It should come on whether it's locked or not. If it comes on your keypad is responding. If it doesn't then it could be unresponsive like you said. --- Sent Via My Samsung Galaxy S3 On Boost Mobile.

And mine still works on Baltimore County.It skips patched channels, it only hold 150 TG ID's per bank, and one bank doesn't know
what the other bank is doing, so wildcardspick up lots of numbered TGs instead of the named ones. When you have to split your localsystem in 2 to fit in a '96, you can't reallyuse wildcards. If you can find a used 106/500scanner, it's quite an upgrade as even the
audio sounds better.
I use my '96 as a favorites scannner. I only
enter all real local TGs I want to hear.

PRO-96's can have the frequency range expanded to cover 700 MHz. but that only works in conventional (non-trunked) mode.

It will not track 700 MHz. trunked systems.

They are useful as a data radio for PRO96Com or other control data decoder but cannot track the systems natively.

This list is for discussion about anything related to Radio Shack's GRE built PRO-96 Digital capable Scanner. This includes Any and all Software for the PRO-96. You can also place your p96 data files for WIN96 software in the files section.

We are the official recognized List by both GRE America, and Radio Shack, And Starrsoft software For the PRO-96..... Several Members are on this list and Our Sister List.

Thanks for your support

Actually the 96 does not have user-upgradable
firmware. You can only update the DSP.

After upgrading to DSP Application firmware version 1.3 (DSP-APP 1.3), some users reported increased instances of the scanner failing to decode the beginning of digital transmissions on certain systems. DSP-APP 1.4 improves the performance of initial digital voice decoding and should result in fewer instances of undecoded digital noise at the beginning of transmissions.

If you have a programming cable, try all 3 to see which one works best in your area. I find that 1.3 works best for me. You may also have to adjust vr4 for best reception. Many of these 96/2096 radios need an adjustment due to age.

blockquote, div.yahoo_quoted { margin-left: 0 !important; border-left:1px #715FFA solid !important; padding-left:1ex !important; background-color:white !important; } Hello,
Your PRO 96 would need reprogramming for the State of Delaware, as the Frequencies have changed due to Rebanding. The TGs used are the same.
Win96 is the software used to program the new bandplan.
Dave L.

I believe if you press the #3 key during the welcome screen, it will show you the firmware version that you are running and the DSP revs?
What rev level does it show?

You might get lucky on the rebanding and just enter the control channel frequency and it takes off, unless they've gone to a Phase 2 P25 signal.
Regards,
J

If your system has rebanded and there are no 700 Mhz channels and you have Win96 then rebanding is Not a problem.

picked up a USB / serial dongle here off of Ebay UK to program my Pro96, so i connected RXD and TXD together & to the centre pin, and GND to the ring on the mono 3.5mm jack, the Pro96 goes into clone mode,
Windows 7 sees the device as COM9, so i set Win96 to com-9 too, i tried the drivers from the files section, no joy, and nothing i can set makes the radio talk to the software. With some combination of the 3 settings in Win96 com-port setup, the best i get is the software makes the Pro96 send data, but a second or two later the software times out and says something about failed waiting for header. that's the nearest i got.

i tried other USB ports on the Windoze laptop, same. laptop works works for progging Astro Saber, Spectra ans XTS and DMR kit, i have a 3/4 expresscard slot with 9 pin D RS-232 also, but am not sure if i can just take 3 wires from the radio to the serial port, the proper cables from the US work out about $60 to buy here in the UK, so, any suggestions ?

I'm not sure TXD and RXD should be tied together.

I'm also not sure that the port uses RS232, but I think is TTL.

Why not just buy the OEM USB cable?

the OEM cable is not available here in the UK, so it needs importing from the USA so a simple cable becomes over $60 !

Its been a long time since I had to program my pro96, but when I did and need to I just use the cable with the serial connector, I think it is called "the purple cable"..and connect it to my old Dell optiplex, which has the serial port, and then use WIN96 Software and everythng works perfectly. the dell optiplex has winxp OS on it.

I have a 9 pin serial port cable to program a Pro-96. Radio Shack original. Still sealed in original blister pack. Never opened or used. Only problem is I have to find it in my ham shack. If I can find it I will ship via 1st class USPS to US address for $30 via Pay Pal.

This list is for discussion about anything related to Radio Shack's GRE built PRO-96 Digital capable Scanner. This includes Any and all Software for the PRO-96. You can also place your p96 data files for WIN96 software in the files section.

We are the official recognized List by both GRE America, and Radio Shack, And Starrsoft software For the PRO-96..... Several Members are on this list and Our Sister List.

Thanks for your support

Thanks Bob, That's very kind, I will have a go at making my own, as whichever way i buy one, it'll still be the best part of $60 for a $3 wire including components, so I guess i'll go find the pinouts for the 9 pin D sub instead :)

You do know the 96 will not trunk 700 MHz, right?

You would have to scan the system conventionally.

If you are trying to get MARCS-IP, and you can still get everything in the 800MHz band, you can program the control channels into a bank in trunking mode in the PRO96 and you're all set; you have to leave the 700MHz trunking to the 435 scanner.
If you have the PRO96 software, you can program the 700MHz frequencies for conventional scanning, BUT you cannot lockout the buzzing talkgroups. However, if there is a frequency used only for data, then LOCKOUT that frequency.
Consult the manual on entering a trunked system- if it's all 800, you should be good with just the 4 control channels, depending on the size of the system there.

Go to Radio Reference dot com and go to Ohio and your county. Go to MARCS-IP in the trunked radio section and search for the towers in your county.

Is there still a 30-day trial period to try out the PRO96 software? If you can get that working, then maybe you can dump your key into it- and using administrator with compatibility mode is a good suggestion too. 73

It has been a while but if my memory is correct the registration key can be moved to a new computer provided the computer has the same name as the old one.

Dave Landrum,
Thank you very much for your relevant response. My several emails to Don have all been ignored despite my request for a response (of any kind!). How long would it have taken Don to reply to my email with a simple "Sorry, my key format has changed and you must purchase a new key." It appears that only more money gets his attention. I will have to consider whether or not to cave to Don's demand, albeit unstated, for double payment. Thanks again.

My key has worked on several of my computers with different names.Win XP and W7Pro, 64 & 86. I always use copy and paste.

Calm down, take a breath and try again. It works unless you miscopied a bit...
WIN500 works the same way and I never had a problem with either.

Make that 45 days...
- All updates are free for registered users
- Unlike other vendors we keep records of all keys and will replace lost keys
- 45 day risk free trial period
After 45 days you MUST register your copy or its functionality ceases.

That brings up a good question, are most of the railroads still on NBFM analog, or are they switching to NXDN or DMR like so many other services, requiring newer very expensive scanners, assuming they don't encrypt, like even our local bus company has?

Most RR comms are still on NB Analog, but here in Georgia, there are several shortlines using Analog for simplex and DMR repeaters, and I am hearing more and more NXDN digital on class 1's being used as well.

This list is for discussion about anything related to Radio Shack's GRE built PRO-96 Digital capable Scanner. This includes Any and all Software for the PRO-96. You can also place your p96 data files for WIN96 software in the files section.

We are the official recognized List by both GRE America, and Radio Shack, And Starrsoft software For the PRO-96..... Several Members are on this list and Our Sister List.

Thanks for your support

From: MCH
Topic: 15526 Message: 15527

That's because the 96 will not trunk 700 MHz. You're
missing any voice comms that are on 700 MHz frequencies.

Topic: 15526 Message: 15529

I suppose it's possible that the only activity on 700 MHz is the control channel, but that would be highly unusual.

It doesn't "default to" 800 MHz. 800 MHz is all it will trunk between the 700 and 800 MHz bands. As I said, if there are any voice assignments in 700 MHz, you will not hear them. Your local site may not have any at the moment, but many other sites do. You will not hear those transmissions unless you scan 700 MHz conventionally (after enabling the extended frequencies).

Voice assignments are the frequencies the voice is transmitted on the system. The system includes both 700 MHz and 800 MHz frequencies. It's not two systems. It's tuning to 800 MHz because that is the voice channel assigned to that TG at that time.

No - it's a fact that it will not trunk 700 MHz. You will notice that none of the 700 MHz frequencies will come up when monitoring a TG. The firmware does not have the 700 MHz frequency tables.

From: toledohamradio@...
Topic: 15538 Message: 15538

Hi, Is there something that tells what the different 'rev levels' are for the PRO-96 models?
I was thinking that there were A, B and C suffixes on the radios, some built in China, some in Malaysia?
Any info?
John

When you turn the Pro96 on, a “Welcome” screen comes up. While it’s there, usually a couple of seconds, you can verify the version of the firmware and get other info by pressing the #3 key. The scanner will display firmware

versions for three separate firmware elements. Hope this helps.

There were a few versions of CPU available for the Pro 96 over its production span. I think it started at 1.3, and version 1.4, and lastly 1.5 were released. The CPU update fixed some issues with trunked systems, and specifically a certain range of talk groups.

At the time you could send it in to Radio Shack for the repair. I thought mine was replaced for no charge back then. I don't think sending in for CPU upgrade is even an option at this point.

DSP is upgradable and you should be able to find the last version available somewhere. The last version of DSP was 1.4.

The Pro 92 had multiple versions over its production as well. The Pro 92 trunked tracked based on subaudible information on the voice channel. This did not work well for Motorola trunking. The Pro 92A was released, and that used control channel data for trunk tracking. There was a Pro 92B also released. At this time I cannot remember what that had fixed. Interestingly the Pro 92A and Pro 92B do not support rebanded systems. The Pro 92 will work on rebanded systems. Just not well.

Frank

Now that you mention it, maybe it was the PRO-92 or 93 where it was a big deal on whether you got an A or B suffix model, made in Malaysia or in China, or something like that?

Well, I'm not sure about where they were made, but the PRO-92 and the PRO-94 both had plain, A, and B versions. The 92 was made by GRE and the 94 by Uniden.

While it may be a question better asked in the PRO-95 group, someone here might be able to help. But not until you tell us where you are and what systems you want to monitor.

Essentially a paperweight. You can't do P25digital and you can't program a table to dothe 6.25 splits now in effect.

Greetings:

I have two of them. Both work great still unless all of your chosen frequencies are in digital mode. I use one for my aircraft feed into Broadcastify.com. and the other does EDACS trunking for our wide area trunking system.

The scanner also does a nice job with conventional analog but does not do pl/dpl decode. It will do LTR trunking as well.

So, if it works, it will do a nice job for you. I use old cellular antennas with BNC connectors for my outside antenna. Great way to recycle old mag-mount cell antennas and increase your listening.

Nice. Thank you. I was planning on using them for emergency services, police, fire. From what Scott was saying is what I was thinking You can't do P25 digital and you can't program a table to do the 6.25 splits now in effect. But wanted to be sure since im not in my field of knowledge.

Any other info is much appreciated

Thank you Steve, Houston TX

GRE made the PRO-96 for Radio Shack- did they make anything afterwards- just maybe the PRO-106 and that was it? Who made the PRO-651 family and PRO-668? Uniden and then Whistler?
Thanks,
73
John

GRE final was the PSR-800, and prototype PSR-900. Then they went belly up and Whistler took over.

Those were OEM models, though.

The last Radio Shack GRE digital models were the PRO-108 and PRO-197.

The 651 and 668 were made by Whistler. In fact, I believe those may have been the first Whistler RS models.

Uniden has made models for RS as well, but nothing recent in the digital line.

Hi,
As one who readjusted the imfamous VR4 in their PRO-96 to get it to improve the decoding of a simulcast system - has anyone had to go back a year or two later and tweak it a 2nd time?

All I can say is I kick myself for not taking the radio back to the Shack right after I bought it and had such horrible decode rates until years later someone showed me how to get relatively acceptable decoding rates with a relatively simple adjustment!

Hi, As one who readjusted the imfamous VR4 in their PRO-96 to get it to improve the decoding of a simulcast system - has anyone had to go back a year or two later and tweak it a 2nd time?
All I can say is I kick myself for not taking the radio back to the Shack right after I bought it and had such horrible decode rates until years later someone showed me how to get relatively acceptable decoding rates with a relatively simple adjustment!73J

Check Craigslist.
I always see ads for scanner programming there.

Ouch- it broke? I will be screwed then with this 12 tower simulcast system if I break it, but it's decoding rate has dropped to half, so I feel compelled to adjust it. 6 of one, half dozen of the other.
Here goes nothing,
John

Yup, and with the Shack going bye bye, no idea how to get either of them fixed. So I now have them as secondary/backup scanners on P25 TRS, and run my BCD396XT, and BCD436HP as main scanners...

This list is for discussion about anything related to Radio Shack's GRE built PRO-96 Digital capable Scanner. This includes Any and all Software for the PRO-96. You can also place your p96 data files for WIN96 software in the files section.

We are the official recognized List by both GRE America, and Radio Shack, And Starrsoft software For the PRO-96..... Several Members are on this list and Our Sister List.

Thanks for your support

Group Contact, subscribe & unsubscribe info:

Unsubscribe: PRO-96-unsubscribe@yahoogroups.com
List owner: PRO-96-owner@yahoogroups.com

Also, Our sister Group RS_GRE-Digital-Scanner@yahoogroups.com is available for People who want to talk about any of the Radio Shack GRE built or planned Digital capable Scanners.

Please enjoy the list....

Thanks
